

Commodore - 64

WORD PROCESSING BREAKTHROUGH!

SCRIPT-64 EXECUTIVE WORD PROCESSOR

(80 Columns in Color)

40 or 80 columns in color or black and white; turns your computer into a Business Machine!

This is the finest word processor available. Features include line and paragraph insertion/deletion, indentation, right and left justification, titles, page numbering, characters per inch, etc. All features are easy to use and understand. With tabs, etc. SCRIPT-64 even includes a 250 word dictionary/spelling checker to make sure your spelling is correct. The dictionary is user customizable to any technical words you may use. Furthermore, all paragraphs can be printed in writing and everyday letters are a snap. To top things off, there is a 100 page manual and help screens to make learning how to use SCRIPT-64 a snap. This word processor is so complete we can't think of anything it doesn't have. When combined with the complete database you have a powerful mailmerge and label program that lets you customize any mailing list with personalized letters. List \$99.95. **Sale \$49.95.** *Coupon Price \$39.00. (Disk only.)

SCRIPT-64 20,000 WORD DICTIONARY

Allows you to check spelling on 20,000 most often misspelled words! List \$29.95 **Sale \$19.95.** *Coupon Price \$10.00. (Disk only.)

SCRIPT-64 COMPLETE DATABASE

(PLUS MAIL MERGE AND LABELS)

This powerful DATABASE is user friendly and makes any information easy to store and retrieve. The user defines the fields and then can add, change, delete, and search for any category wanted! When combined with the Executive Word Processor you can search out any category (zip codes, even hair color, etc.) and print super personalized letters! 600 names can be sorted and formulated on each disk in any order or category! Will handle any size mailing list by changing or adding disks! List \$69.00. **Sale \$34.00.** *Coupon Price \$24.00.

Now you can turn your Commodore 64 into a talking trivia buff.

Introducing TriviaTalker...for only \$39.95.

With the TriviaTalker disk your Commodore 64™ can play games of trivia along with you and your family. It asks you questions out loud using the sound interface device already in your Commodore. It corrects you when you're wrong and congratulates you when you're right. TriviaTalker comes with a built-in timed response scoring system. The faster you answer the multiple choice questions, the higher your score.

You can also confound the trivia pros by adding your own questions to the game. And that can make for some exciting, creative trivia parties or educational tutoring for your family.

TriviaTalker includes five different categories of trivia and knowledge: American History, Sports, Science, Entertainment, and Geography.

If you're not a trivia buff, for only \$19.95 the Votalker voice synthesis disk allows your Commodore 64 to speak with a truly unlimited vocabulary. It can say anything you can type. You can program the Votalker for other games, for education, for personal programs—applications as limitless as your mind (and mouth). (Votalker is already included in the TriviaTalker program.)

To order call 1-800-453-4001
(in Utah 1-800-662-8666). VISA and MasterCard accepted. Or send a money order to Votalker, 1394 Rankin, Troy, MI 48083. U.S. dollars only. Please add \$2.00 for shipping and handling. Michigan residents add 4% sales tax. Allow 2-6 weeks for delivery.

*The answer is San Marino.

Which One Is The Real Machine Language?

I have seen many useful programs in your magazine which show how to program in machine language using three-letter commands. I have also seen a number of programs which are nothing but a stream of numbers (that have to be entered using the MLX program in the back of the magazine).

Which of these is true machine language? Is there any way I could go from one form to the other?

Those three-letter ML commands are the equivalent of BASIC commands. In both ML and BASIC there are around 50 commands, but people commonly only use about 20 of them. Machine language commands are abbreviations: LDA stands for Load the Accumulator, JSR for Jump to SubRoutine.

You write ML programs using an *assembler* into which you type LDA and the assembler translates that LDA into a number. The computer cannot understand LDA; it needs the number. That's because the computer's language (machine language) is pure numbers, no letters of the alphabet. But numbers are harder for us to remember than words like JSR. So, the assembler translates these commands into the numeric form that the computer can run.

To answer your first question, *both* the commands and the numbers are true machine language: They're just different forms of the same program. When an ML program is in the form of commands, it's called *source code*. After an assembler translates these commands into numbers, the result is called *object code*. So, you go from the version people can use most easily to the computer-runnable version by assembling source code into object code.

To go the other way, you use a program called a *disassembler* which looks at the pure numbers of the object code and reconstructs them into a listing of the original, three-letter commands.

As you can see, the same ML program can be printed in COMPUTE!'s GAZETTE in three forms: as source code, as object code (for MLX), or as object code which is listed in DATA statements within a little BASIC program (called a BASIC loader) which POKes the object code into memory for you. To see examples of all three forms, take a look at last month's column. The program therein is printed as source code (Program 1), as a disassembly (Program 2), and as object code in a BASIC loader (Program 3). These are three different versions of the same program.

Where Can I Find An Advanced Assembler?

Where can I get an assembler that allows variables; automatic insert (so I can move the whole program forward in memory as many bytes as I want); and line numbering (like in BASIC)?

The LADS assembler in my new book, *The Second Book of Machine Language* (COMPUTE! Books), includes all those features.

IF, THEN, And GOTO In Machine Language

I have noticed that there are two different ways of using the CoMPare commands (CMP) in ML. I'm not sure which method works or how. They are: 1. Using BEQ or BNE after CMP to check for equal or not equal and 2. Using BCC or BCS after a CMP to check for the same thing. Would you please explain this?

The BEQ/BNE (branch if equal/branch if not equal) and BCC/BCS (branch if less than/branch if more than or equal) pairs are not checking for the same thing as we'll see in a minute.

CMP is one of the most important ML instructions. It's always used in tandem with one of the instructions beginning with the letter B which branch to a different part of your program depending on the results of the comparison. In other words, CMP followed by, for example, BEQ, is the equivalent of this line in a BASIC program:

```
10 IF A = 20 THEN GOTO 1000
20 RETURN
```

however you write the ML like this:

```
CMP #20
BEQ 1000
RTS
```

Whenever you use CMP, you are always CoMParing against whatever is currently in the Accumulator. So, in the example above, you will branch to *address* 1000 if the number in the Accumulator is a 20; otherwise, as in BASIC, you will go on to the next command (RTS, in this example).

By the way, be sure to remember that all the B instructions are limited to branches 127 bytes in either direction *from their own address*. If, in our example above, your BEQ command were assembled into memory at address 1020, that would be within range. If it were assembled to address 1500, you couldn't make a branch 500 bytes long, all the way down to 1000. You have to give a branch target which is within plus or minus 127 bytes. Many assemblers will

automatically take care of this problem for you, but if you're using a simple assembler, you'll need to watch that you don't branch out of range.

In any case, each of the important *B* instructions you mention is equivalent to one of the BASIC comparison operators: =, <>, <, or >=. BEQ is the same as =; BNE (<>); BCC (<); and BCS (>=). Since they are so important, you might want to spend a few minutes practicing with them until you understand exactly what triggers each of these various branches. Set up a little program like this (the numbers on the left are the addresses where these instructions are assembled):

830	LDA	#20
832	CMP	#20
834	BEQ	840
836	BCC	846
838	BCS	852
840	LDA	#61
842	JSR	65490
845	RTS	
846	LDA	#60
848	JSR	65490
851	RTS	
852	LDA	#62
854	JSR	65490
857	RTS	

After you've assembled this, you can SYS 830 and you should see an equals sign (=) printed on screen, proving that you made the BEQ branch. The 20 in the Accumulator was equal to the 20 being compared. Now POKE 831,15, replacing the 20 in the Accumulator with a number which is *less than* the CMP #20. When you next SYS 830, you will see that a branch based on less-than took place. The less-than symbol is printed. Finally, try POKEing in a number higher than 20.

If you have questions which you would like to see answered in this column, please write to:

Debugging BASIC

Part 1

Todd Heimarck, Assistant Editor

Program bugs have a thousand faces. No matter how experienced a programmer might be, there's almost always a time between finishing and really completing a program—debugging time. This month we'll see what the computer does when you make a mistake. Next month, in Part 2, we'll look at some useful debugging methods as well as some of the mistakes a computer can make.

Some program bugs are easy to recognize: The program crashes and you are told what kind of error you made. Or, worse, the computer locks up. These are the deadly, or *fatal* bugs.

Other bugs are sneakier and not as easy to recognize. Perhaps you've made a slight mistake and the program seems to run, but is actually making incorrect calculations (like figuring interest rates on a 13-month year). Subtle bugs are sometimes worse than fatal ones; at least you can recognize something's wrong when the program crashes.

A bug happens when the programmer says one thing and the computer either doesn't know how to do it, or does something very different.

Some people say that computers never make mistakes, that all bugs are caused by people. That's not always true. After all, computers are designed and manufactured by people who can make mistakes. It may be a hardware bug or one built into the operating system. Or maybe the programmer just didn't understand how the computer would interpret a line—a misunderstanding rather than a mistake. But a computer is pig-headed. It knows how programs should look and won't compromise. Next month we'll look at some of the mistakes computers can make.

For now, we'll concentrate on some of the mistakes we, as programmers, can make and how the computer deals with them.

SYNTAX ERROR

There are over two dozen error messages, but SYNTAX ERROR seems to appear most often. The line number is always included.

The first thing to do, of course, is to LIST the offending line. Take a good look at it. If there are parentheses, make sure they match up. There should be an equal number of opening and closing parentheses.

Also, check all the BASIC keywords to make sure they're spelled correctly. You may have mistakenly abbreviated LEN as L SHIFT-E (which turns out to be the abbreviation for LET, not LEN). If you are writing to disk or tape files, you should note that the command PRINT# is distinct from the ordinary PRINT. The abbreviation for PRINT# is P SHIFT-R (not ?#); using a question mark won't work when working with tape or disk files.

Look at the punctuation, a common source of errors. It's easy to accidentally type a period instead of a comma, a semicolon where you meant to put a colon. Or there may be mismatched opening and closing quotation marks in a PRINT statement. If you're copying a program from a book or magazine, look closely at the look-alike characters (I and 1, O and 0).

Tokens, Keywords, And Reserved Variables

When you type a program line and press RETURN, you must have at least one BASIC *keyword* (command or function) in the line for it to be legal. Even the do-nothing REM is a BASIC keyword. The computer reads the line from the screen and turns all keywords into tokens before the line is stored in memory. A token is a single number between 128 and 255 which represents the command or function.

You must avoid including keywords in variable names. Say you're writing a simple accounting program which figures out the profit margin you make on different items. You need a variable for the price you pay (call it COST), another variable for the amount for which you sell it (call it LIST, for list price), and one more for the profit (MONEY). Then you calculate the margin with the formula $MONEY = LIST - COST$. Right? Wrong.

All three variables are illegal and will crash the program. LIST is a keyword used to list a

program; you can't use it as a variable. COST doesn't look like a keyword, but the first three letters spell COS; your computer will try to find a cosine of an angle, although it will stop when it can't find parentheses and an argument. And MONEY is a problem because the keyword ON (as in ON-GOTO or ON-GOSUB) is embedded in the variable name. When you find an embedded keyword in one part of a program, there's a good chance the same variable is used elsewhere, in other sections. You'll have to find all of them and change them to something legal.

In addition to the many keywords, there are three reserved variables which you can't use in your programs. They are TI, TI\$, and ST. The first two are used for timekeeping, and ST is short for S^Tatus, which is used in input/output operations. Stay away from these variable names, unless you know you want to check the time or status. You can't define TI or ST, although you can print them to the screen and use them in IF-THEN statements and logical operations. You *can* define TI\$, which is useful for timing programs, but it has to be a six-digit string (for example, TI\$ = "103000" sets the clock to 10:30 a.m.).

A VIC or 64 is a little more forgiving with the reserved variable names than with keywords. You can't use a variable TIPS because TI is included in the first two letters of the name. But you *can* use a variable name like ITIN, which has a TI in the middle, because only the first two letters of a variable name count. ITON, on the other hand, is not acceptable as a variable name, because there are two BASIC words in it (TO and ON), and BASIC words cannot appear *anywhere* in a variable name.

Program Glue

Need a program line inserted between 10 and 20? No problem. Type a line 15 and press RETURN; the computer automatically inserts the line in its proper position. LIST 10-20 will prove that the line is there where you wanted it.

It's almost as if your VIC or 64 broke the program in two and pasted the line in its proper place.

This cut-and-paste feature, usually quite handy, can become a curse which results in two kinds of program bugs.

The first bug, truncated lines, is relatively easy to find. It usually occurs when keywords are abbreviated. If, for example, you use ? instead of PRINT, or P SHIFT-O instead of POKE, you can create logical lines which are legal when they're entered, but exceed the limit when listed. Later editing of the line leads to problems.

If you use abbreviations and multistatement lines, the result is sometimes a line which looks longer than should be possible when listed. A

question mark takes up only one space on a line; but LIST detokenizes and changes that single letter into five: PRINT. List such a line on a 64 and you may see two full screen lines plus a few characters on the third line. And the program runs without errors. But go back to edit the extra-long line, press RETURN, and the input buffer will read only the first two screen lines into memory. The result is truncated—or chopped off—program lines. You lose the last few characters. To get around the two-line limit (four on a VIC), you have two choices. Either retype the keywords using abbreviations or break the long line into two shorter lines.

This limit on line length means it's a good idea to press RETURN only when you're editing a line. To move around the screen, use the cursor keys (or SHIFT-RETURN, which does not enter the line in program memory and is also a way to get out of quote-mode).

The second bug, which is more difficult to find, happens when your computer seems to glue two program lines together. Say you're writing a program on a VIC-20. Line 500 uses exactly 44 characters (two screen lines). You type the line, but forget to press RETURN. The cursor is positioned at the beginning of a screen line, so you type line 510 and press RETURN. The computer treats the two lines as one because it received only one RETURN. The same thing can happen on a 64 if the first line is exactly 40 characters.

Some Other Common Errors

POKEs and SYSEs can wreak havoc if improperly used. Most lockups are caused by one or the other of these powerful commands. When you're debugging, watch for transposed or missing digits in POKEs and SYSEs (POKE 53820 instead of POKE 53280, for example).

Duplicate variable names can cause all sorts of problems. You might use a variable called A to hold a value at the beginning of the program, and then inadvertently use the same variable name later on. If the program returns to the beginning, the value has changed. FOR-NEXT loops sometimes lead to duplication. When you're using a variable like A, make sure you don't use it as an index in a FOR-NEXT loop. And remember only the first two characters of a variable count; the computer thinks ALT is the same variable name as ALIEN.

To avoid doubled variables, it helps to pick certain letters to be used only in loops and as "temporary" variables. For example, decide ahead of time you will always use J, K, and L in FOR-NEXT loops.

Be careful with additional statements after an IF-THEN. If the condition (between IF and THEN) is *not* true, the program jumps to the next

BASIC line; it doesn't fall through to the next colon. For example, in this line:

```
55 IF A=1 THEN B=15: PRINT "NEXT  
QUESTION?" :INPUT Q
```

the PRINT and INPUT statements will happen only if A equals one. If not, everything after the THEN is ignored. This feature is useful if you want multiple actions under certain conditions. But it can catch you if you don't know about it.

The error message RETURN WITHOUT GOSUB is usually the consequence of the common practice of putting subroutines at the end of a program. The computer finishes the main routine and continues through to the first subroutine until it reaches the RETURN statement. The quick fix is to place an END statement between the main routine and the first subroutine. For example, if subroutines begin at line 5000, add a line 4999 END.

NEXT WITHOUT FOR, an infrequent error message, generally comes from improper nesting of loops. Loops are like onions; you can build layers which completely enclose other layers. In other words, the first loop to begin has to be the last to end.

```
1 FOR J=1TO5: FOR K= 3TO15: NEXT K: NEXT J  
2 FOR J=1TO5: FOR K= 3TO15: NEXT J: NEXT K
```

Line 1 is correct because the K-loop is inside the J-loop. But line 2 spells trouble because loops cannot overlap.

The use of arrays can lead to easily rectified errors. It's best if you DIMension all arrays at the beginning of a program, or in a one-shot subroutine. Once you use DIM, you can't use it again on the same array name or you'll get a REDIM'D ARRAY error.

Order Of Operation

Most of the mistakes described above will cause your program to stop with an error message on the screen of your TV or monitor. They're situations where you tell the computer to do something and it doesn't recognize what you want. Program crashing errors are inconvenient, of course. But it's nice to have the computer tell you what kind of mistake you made and which line was wrong.

Less convenient are errors of procedure, where you write a program to do one thing, but it ends up doing something completely different. It doesn't crash, but it does strange things to the screen, or gives seemingly impossible results.

You have probably used instructions which you interpret one way, but the computer interprets another. And you can't change the way your computer does things, unless you want to completely rewrite the operating system (even changing the rules of BASIC means you have to

follow the rules of machine language). Some programmers wish they could have a new BASIC command DWIM (Do What I Mean), which would instantly straighten out procedural errors.

One of the most common problems with mathematical calculations comes from the way the computer evaluates equations. There is a definite order of operations, sometimes called the hierarchy of operators, (the items at the top of the list have a higher priority):

()	Parentheses
↑	Exponentiation (up arrow)
+ -	Plus and Minus Signs
* /	Multiply and Divide
+ -	Add and Subtract
=	Equals (Assignment)
= < >	Comparisons: Equals, Less Than, Greater Than
NOT	Logical NOT
AND	Logical AND
OR	Logical OR

Note that some operations, like NOT, work on a single number; they're called unary. Most need two numbers and are called binary functions. Plus and minus signs can be either unary (in the number -3, the minus sign works on a single number) or binary (the minus sign connects two numbers in the expression 10 - 6).

Because the higher operations are calculated first, you can always figure out the results of an equation. For example, $J = 4 + 5 * 3$ assigns 19 to J because the multiplication is done first, binary addition second, and assignment-equals third.

When you're debugging a program and one of the variables is being consistently miscalculated, there's a good chance you're a victim of the hierarchy. The quickest way to fix such an error is to liberally sprinkle parentheses throughout the suspicious equations. Your other choice is to trace through the line step by step, to find how the computer is evaluating the equation.

There's a slight chance that using too many parentheses in debugging can lead to one of the more puzzling errors, stack problems, caused by one of the various limits you have to live with.

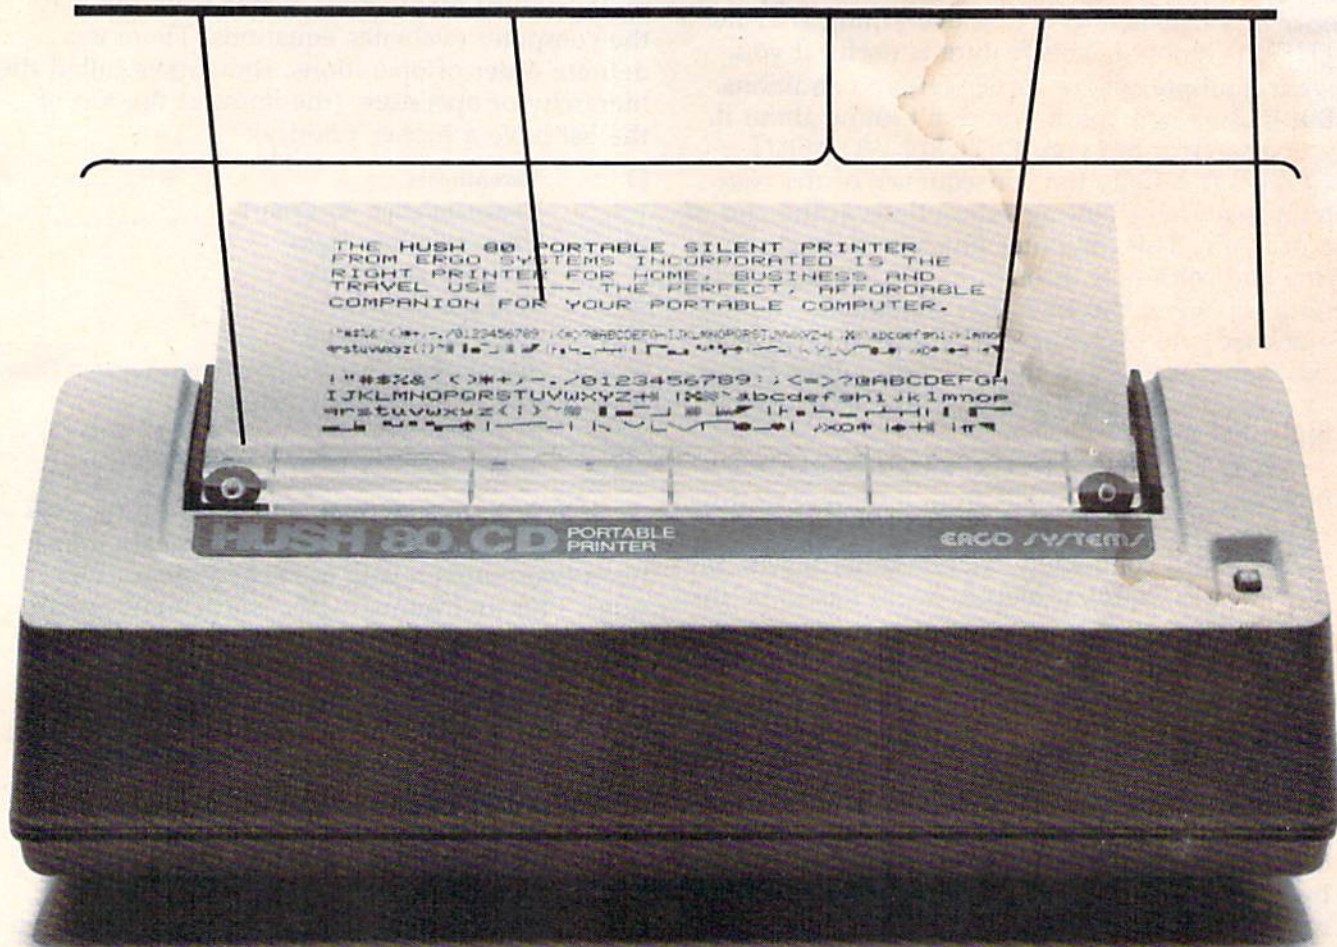

Memory Limits: The Stack

There are two causes of OUT OF MEMORY errors. The first is programs and variables filling up all available BASIC RAM (more likely to happen with a VIC). The second is a stack overflow (the likely cause of OUT OF MEMORY errors on a 64).

Let's look at the stack first. The *stack* is a special section of memory just above zero page. It takes up most of page 1. The stack is used by the operating system for notes to itself.

When a 64 or VIC begins a FOR-NEXT loop, it writes a note about where in memory the loop

BIG ON FEATURES.

\$139⁹⁹

SMALL ON PRICE.

You read that right. A full 80 column, 80 character-per-second, Commodore-compatible dot matrix thermal printer, complete (with a 90 ft. paper roll, interface cable and power pack), ready-to-run — at 800 words per minute — for only \$139.99. But your wallet isn't the only thing the HUSH 80 CD is compatible with. It's compatible with all Commodore models;

including the Commodore 64, the VIC 20, and the new Commodore 264.

And you'll find the HUSH 80 CD printer is big on lots of small things too. It weighs about one-half the amount of its nearest competitor (it's compact size fits conveniently into a briefcase). And it's extremely quiet, with fewer working parts, which means less noise and less to go wrong.

Ask your local computer store or dealer for the HUSH 80 CD today. And if he doesn't carry it, call us at 415/322-ERGO. And find out where to get the little printer that does the big jobs.

**HUSH 80 CD
PRINTER**
LESS PRICE, LESS NOISE,
LESS SIZE.

STEVE PUNTER'S NEWEST C-64 WORD PROCESSOR

FEATURING:

- 40 to 160 column video display
- Single pass double column output
- 100% proportional printing capability
- Double sided printing with margin offsets
- Over 30 printers fully supported
- "Bump free" loading — MSD — 2 compatible
- Automatic spelling corrections with Spellpro™

begins, pushes it on the stack, and forgets about it until it comes across a NEXT statement. NEXT tells the computer that somewhere earlier in the program a FOR started a loop. It then pulls the information it needs off the stack and jumps back.

Something similar happens when there are parentheses in an equation, and when you use GOSUB. To illustrate, type NEW and try running the following program:

```
10 A=A+1:PRINTA
20 GOSUB 10
```

A very short program with only one variable counts up to 24 and then crashes. How could it possibly run out of memory? The key is the GOSUB. Every time you go to a subroutine, the return address is saved on the stack. Since there are no RETURNs in the program, more and more addresses are saved, until finally there is no stack space left. It's as if you were trying to stick more and more notes to a refrigerator, until the magnet could hold no more.

Type NEW and enter this program:

```
10 FORA=1TO20
20 FORB=1TO20
30 FORC=1TO20
(and so on, up to 130 FORM=1TO20)
```

Don't worry about adding any NEXTs, the computer will never get that far. Run the program and you'll get an OUT OF MEMORY error after only ten loops have begun. A FOR-NEXT loop uses up a lot of space on the stack—for a pointer to beginning of the loop, step size, highest value, and variable names.

When stack problems pop up, they're often caused by a GOTO in the middle of a subroutine. It can leave some garbage on the stack. The same goes for jumping out of a FOR-NEXT loop. And too many parentheses can give you either a FORMULA TOO COMPLEX error or contribute to an OUT OF MEMORY message. As the garbage on the stack builds up, it eventually reaches the limit.

Programs And Variables

The other way to run out of memory is fairly straightforward. You simply use too much BASIC RAM for the program and its variables. Try the following program:

```
10 T$="ABCD":U$=""
20 L=FRE(0):IFL<0THENL=L+2↑16
30 L=INT((L-30)/3):DIM A$(L)
40 FORJ=1TOL
50 A$(J)=T$+U$
60 PRINT J; LEN(A$(J)), FRE(0)
70 NEXTJ
```

It runs on a VIC (expanded or not) or a 64. You'll run out of memory almost right away.

Now change line 50:

50 A\$(J)=T\$

Run it again and there's no loss of memory. It will run all the way through (press RUN/STOP if you don't want to watch hundreds of strings go by). The first program wasn't able to create even ten four-letter strings, the second created hundreds. The only difference is that the first program added a null string (which has a length of zero); the second did not. The first created *dynamic strings*, the second created *static strings*.

If you define a string by concatenating (adding two strings together), by dissection (dividing a string with MID\$, LEFT\$, or RIGHT\$), or by inputting it (from a tape or disk file, or the keyboard) the string is called dynamic. It has to use up part of BASIC memory. If you define it in BASIC, assigning it (A\$="ABC") or reading it from DATA statements (READA\$), the computer saves memory by remembering where the definition was in program memory. Your VIC or 64 doesn't have to use free memory to store static strings. They're already in BASIC memory.

If you define a lot of variables (as in the above program), available memory can dwindle to nothing. When you find your program running out of memory, you can try a number of things:

- 1). **Check free memory.** If there seems to be a lot left, you may have a full stack, caused by too many unresolved FOR-NEXT loops or GOSUBs.
- 2). **Eliminate unnecessary program lines, especially REMarks.** Or combine two or more statements on a single line separated by colons (every line uses five bytes for overhead, whether it has one statement or eight).
- 3). **Cut back on variables.** If you're using arrays, remember that integer arrays use less than half the space of floating point arrays.
- 4). **Completely rewrite your program.** It sounds drastic, but once you've figured out the procedures you're using, the second version of a program is often faster and uses less memory.
- 5). **Try chaining programs.** If you have a lot of instructions in a game program, you can write a loader program which prints the instructions and then loads the main program.

Next month, we'll look at some quirks of the VIC and 64, how imprecise and inaccurate math can be, why you can sometimes PRINT impossible-to-INPUT variables to a tape or disk file, why programs sometimes pause as if locked up and then continue, and more. We'll also look at a variety of methods to hunt down and eliminate bugs. ☺

Seeking software authors - please write

Bought expensive software lately? Brace yourself.

The Intelligent Software package for C-64™, VIC™, and PET/CBM™. \$35 for everything.

No 3-color ads, no shiny packaging, and (sorry) no games; just fifteen powerful, useful programs that will put your Commodore to work right now, in your home or office; all on one disk at a near-unbelievable price. Includes:

Database: A complete multi-keyed fixed-record-length data base manager. Sort or select (using all relational operators: =, >, <, AND, OR, NOT, wild card) on any field, perform computations on numeric fields. Any operation can be performed on all, or only selected records. All fields completely user-definable. Screen editing for records. Can be used for any number of tasks, including accounts-receivable, mailing lists, inventory control, expense account maintenance, or as an electronic rolodex. Even if you use your Commodore for nothing else, this program alone might justify its expense.

Word Processor: A full-featured menu-driven word processor, including: very fast file commands (including a disk catalog), screen editing, text locating, and full control over margins, spacing, paging, indentation, and justification (all commands imbedded in text). "... well done and highly functional ... provides an excellent alternative to the high priced word processors ... this is an excellent buy. Highly recommended." — *Midnight Software Gazette*. "Provides good basic features." — *Compute's Gazette*.

Copycalc: An electronic spreadsheet. Turns your Commodore into a visible balance sheet; includes screen editing. "Excellent program for budgeting, estimating, or any math-oriented use ... well worth the money. Highly recommended." — *Midnight Software Gazette*.

Also included: **ReportGen** (interfaces W/P with Database to create form letters, invoices, mailing labels, other reports); **Baseball Statistician** (compiles batting statistics for a baseball or softball league of up to 250 players, and generates reports on a player, team, or the entire league, including standings); several W/P utilities, including **Index** (indexes W/P's text files); several Database utilities, including **DBmerge** (facilitates multi-file database applications); also **Checkbook**; **Inventory**; **Paper route**; **Loan Analyst**; **Labeler**; more.

Versions of the package are available for any and every Commodore computer having a minimum of 12k RAM; all programs will fully support tape, disk, and printer. Price includes shipping within USA and Canada (enclose \$5 fee for C.O.D.); Calif. residents add 6%. Any two programs on cassette, \$20. This ad is the catalog; you may order documentation for any one program separately for \$2 postpaid (deductible from later order). Available only from:

1541 DISK DRIVE ALIGNMENT PROGRAM

Finally, a complete disk drive alignment program! No special equipment needed! A two disk (program and calibration) program allows anyone with average mechanical skills to properly align the 1541 disk drive. Complete instruction manual. Don't be fooled by cheap imitations! This is the alignment program that works! See the review in the October issue of the Gazette.

Stop And Go

Jim Pejsa

When a program is running and the telephone rings, what do you do? This short machine language routine provides a pause button which temporarily halts the program. It also works on program listings. For VIC and 64.

A very useful function found on many other computers is missing from Commodore computers. Many computers allow the programmer to stop and restart a program listing or run using CTRL-S and CTRL-Q.

Pressing the CTRL key on the VIC or 64 will slow the listing down, but to carefully study a program it's often necessary to stop the listing. Having to continue the listing by retyping LIST followed by some line numbers (if the program is long) is an inconvenience. Additionally, there are times when you want to stop a program (maybe to study some output) and restart it at will.

Since I was anxious to try some machine language programming, I decided to write a program to add this feature. CTRL-S (for stop) and CTRL-Q (for restart) seem to be standard for these functions on many computers. The program is designed in such a way that the realtime clock will continue to be updated while processing is stopped.

The machine language for the program in the DATA statements is loaded by the BASIC program. Simply type in the program and run it to load the ML. The program loads beginning at location 679 (\$02A7) in some unused locations below the BASIC program area, so it will not interfere with any BASIC programs. The SYS statement in line 30 starts the machine language program. Unfortunately, if RUN/STOP-RESTORE is ever used to stop a program, you will find that the CTRL-S and CTRL-Q functions become inoperative. You can get them back by typing SYS 679.

Briefly, the program works as follows. When it is initially started with SYS 679 in BASIC, the hardware interrupt (IRQ) vector is changed to point to this program. The program is accessed each time the hardware interrupt occurs (every 1/60 second). The program checks for a CTRL-S keypress. If it's detected, it stops the listing or run and then checks for CTRL-Q. When CTRL-Q is pressed, the listing or run is restarted.

Part 1

Baker's Dozen

Lawrence Cotton

A short, carefully designed program can produce some amazing results. To demonstrate, here's the first of a three-part series of 13 graphics and sound programs which entertain and amuse. A number of effective programming techniques are demonstrated also.

Program length cannot be equated with program quality. You might remember your first efforts at BASIC programming, and in looking back see how much more efficient and effective your programming methods could have been. Sometimes, just a few lines can go a long way.

In this series, we'll look at some programs which are designed to show off the graphics and sound capabilities of the 64. You'll notice that each of the programs is short and to the point. This makes the listings easier to understand so you can see what's happening and incorporate the ideas into your own programs. Or experiment with these short programs, expanding them to do more.

This month, the four selections are graphics programs: "Quilt," "Double Diamond," "Tunnels," and "Christmas Tree." As the series continues, you might want to experiment by combining sound from one program (we'll look at sound programs next month) with graphics from another. Most of the programs involve POKEing characters to the screen in visually pleasing patterns and colors. Feel free to substitute your own characters, colors, or limits. It's best to have a color TV or monitor.

Quilt

This ten-line program produces a multicolor patchwork quilt which changes repeatedly until you press RUN/STOP-RESTORE. Let's look at the program to see how it works.

Line 10 clears the screen (CHR\$(147)), changes the character color to white (CHR\$(5)), and makes the background and border colors black (POKE 53280,0 and 53281,0). In line 20, R is the amount to be added to screen memory locations to get the corresponding color memory locations. A is the increment.

Line 30 and the first half of line 40 choose random sizes of blocks to be "painted." In the last half of line 40, a random character (M) is chosen to paint the blocks.

Lines 50 and 60 make sure the selected block will fit on the screen; if not, another size is

chosen.

Lines 70-100 perform the painting of the blocks. A loop within a loop paints a block of size N characters by P characters in color Q starting at location V. Line 100 then jumps back to restart the process.

Double Diamond

This program's a bit longer (23 lines), but the effect is quite nice. It draws two superimposed diamonds of random characters and colors.

Let's look at the key lines. Lines 30 and 40 contain values for the location of the diamonds (V and W) and for the creation of the diamonds within diamonds (S and U).

Line 50 picks a random color (T).

Lines 60-120 POKE random characters and colors to the screen and increment the position of characters by A, B, C, and D to produce diagonal motion to form the left diamond. Lines 150-200

do the same for the right diamond.

Each of the diamonds (V and W) is limited in size in lines 130 and 210. Lines 220 and 230 pause then loop back to create new diamonds. Again, to stop the program, press RUN/STOP-RESTORE.

Tunnels

Probably the most interesting visual effect this month is "Tunnels."

Line 20 sets up variables for drawing the rectangles and starts at screen location 1984. Lines 30 and 70 control the number of rectangles drawn in each loop.

Lines 40, 60, and 80 determine the rectangles' positions and increase their size by one as they are drawn.

The rectangles are created in lines 120-190. Numbers 66 and 67 are the values to POKE for vertical and horizontal lines, and 73, 74, 75, and

85 are the POKE values for the four corners of each rectangle.

Christmas Tree

Finally, let's do a program in the holiday spirit. "Christmas Tree" draws a twinkling tree formed of "lights" which randomly turn on until the tree is completely filled. It then continues twinkling until you press RUN/STOP-RESTORE.

If you'd like to change the shape of the tree, be sure to change the 156 in lines 40-60 to the total number of spots you want to light up.

Line 90 POKES the random spot with an asterisk (#42) and its corresponding color memory location with a random color code from 1 to 14 (omitting black and light gray). The DATA statements in lines 110-360 are the actual screen locations for the asterisks to be POKEd.

Feel free to experiment with the variables in these programs and see what interesting modifications you can come up with. Next month, we'll look at some programs which integrate sound and graphics.

See program listings on page 160. @

Disk Merge

Robert D. Riemersma, Jr.

A disk full of useful subroutines can be a great help when you're writing a program. But to be truly useful, two or more might need to be merged. This utility does it for you. For the VIC or 64, with a disk drive.

"Disk Merge" does just what its name says. It reads two BASIC programs from a disk and merges them into a new file on the disk. To merge more than two programs, run it more than once.

A simple appending program (see the February 1984 GAZETTE Feedback for an example) will add one program to the end of another. A merge program is more sophisticated. It must look at the line numbers and insert them in their proper place, as if shuffling a deck of cards.

Four Questions

Type in and save the program. Before running it, make sure the two programs to be merged are on the same disk. They must be PRG (program) files. Disk Merge won't work on sequential or relative files. It's a good idea to turn off any other peripherals, especially printers.

Run it and you'll be asked four questions. (The STOP key is disabled during input, so if you want to escape the program, type the asterisk (*) and press RETURN.)

Primary File?

Enter the name of the primary file you'll be merging. Keep in mind that if the two programs have a line number in common, the primary file takes precedence. For example, if they both include a line numbered 210, only the line from the primary file will appear in the final merged program.

If you have a dual disk drive, you can in-

clude the drive number by entering a quotation mark, drive number, colon, and the filename. This allows you to merge programs from two different disks. Note that this doesn't apply if you own two 1541s (device 8 and device 9). It will only work with a dual drive (drive 0 and drive 1) such as the Commodore 4040 or an MSD. With 1541s, the two programs must be on the same disk.

Secondary File?

Answer this question with the name of the second program, the one which will be merged into the first.

Merged File?

Enter a name for the new program, the output file.

Base Address? 1025

The VIC-20 and 64 automatically relocate BASIC programs on a standard LOAD, so it doesn't really matter what the number is. Simply press RETURN. However, if you want the program to work on a PET/CBM, the base address 1025 will create a program that runs on the VIC, 64, or PET/CBM models (within the usual limits of compatibility).

After answering the questions, two things will happen. You'll see the disk drive's red light turn on, and numbers will appear on the screen. The numbers tell you which line is being processed and written to disk.

On the left, you'll see the primary file's current line number. On the right is the line being merged from the secondary file.

When the program ends, you have two options. You can run it again (to merge more programs), or load the newly merged program, which should be ready to run. On large programs, the merge may take several minutes.

See program listing on page 172. 

COMPUTE!'s GAZETTE Back Issues

JULY 1983: Commodore 64 Video Update; Snake Escape; Alfabug; VIC Marquee; Word Hunt; Learning To Program In BASIC; Quickfind; 64 Paddle Reader; Machine Language For Beginners; Enlivening Programs With Sound; Using Joysticks On The 64.

OCTOBER 1983: The Anatomy of Computers; Telegaming Today And Tomorrow; Commodore's Public Domain Programs; Oil Tycoon; Re-Beep; Aardvark Attack; Word Match; Machine Language For Beginners; How To Use Tape And Disk Files; Understanding 64 Sound; Speeding Up The VIC; HOTWARE; Improving 64 Video Quality; Using The VIC's Clock.

MARCH 1984: The Electronic Castle; Managing Your Home With Your Computer; Getting Started With A Disk Drive, Part 5; CUT-OFF!; Poker; Tree Tutor For Tots; Guess America!; Sea Route To India.

APRIL 1984: Robots: The New Mobile Computers; How To Start A User Group; Bingo 64; Making Calendars; French Tutor; Hints & Tips: Adding A Second Joystick To The VIC; Power BASIC: Numeric Keypad.

MAY 1984: Exploring 64 Sound; SpeedScript Revisited; Sound Sculptor For The 64; Props; Mind Boggle; Memo Writer; The Beginner's Corner: Teaching Music With Computers.

JUNE 1984: The Future Of Computer Games: Software That Thinks For Itself; 3-D Tic-Tac-Toe; Castle Dungeon; Therapy; File Copier; Power BASIC: One-Touch Keywords; The Beginner's Corner: Planning A Game Program.

JULY 1984: In Touch With Your Computer: Graphics Tablets And Light Pens; Space Patrol; Robot Math; Ultrafont +; Machine Language For Beginners: What Is Machine Language?; The Beginner's Corner: Quilt Squares.

AUGUST 1984: A Survey Of Printers For The VIC And 64; Selecting A Printer Interface; Campaign Manager; Sprite Magic; Balloon Blitz; Disk Purge; The Beginner's Corner: Using A Printer.

Issues not listed are not available.

Back issues of COMPUTE!'s GAZETTE are \$4 each. All prices include freight in the U.S. Outside the U.S. add \$1 per magazine order for surface postage, \$4 per magazine for air mail postage. ALL BACK ISSUES ARE SUBJECT TO AVAILABILITY.

NEWS & PRODUCTS

VIC, 64 Interfaces

Omnitronix Incorporated has released two interfaces for use with the VIC-20 or Commodore 64.

The parallel printer interface connects to the user I/O port on either the VIC-20 or the 64 and comes with a driver software disk which allows CBM printer emulation, such as tabbing.

Printers without bitmap graphics capability can print Commodore graphics and control codes in the form of mnemonics or the CHR\$ code.

Suggested retail price is \$39.95.

The second interface, the Deluxe RS-232 Interface, which also plugs into the user I/O port, provides many RS-232 signals, including ring detect. It has three user-selectable switches allowing settings for DTE/DCE, pin 5, or pin 20 handshaking, and selection of a BUSY line polarity.

The interface comes with either a male DB25 on a three-foot cable or a PCB mounting female DB25, making it compatible as a replacement for the Commodore 1011A.

Included in the \$39.95 retail price is a BASIC terminal program which can be typed in.

Omnitronix Incorporated
P.O. Box 43
Mercer Island, WA 98040
(206) 236-2983

The NOMAD personal robot for the Commodore 64 retails for \$179.95.

Personal Robot For 64s

Genesis Computer Corporation has introduced NOMAD, a personal robot for use with the Commodore 64.

NOMAD is driven by stepper motors, and can move forward, reverse, right, and left. It has ultrasonic "eyesight" which allows it to detect objects in its path.

NOMAD's robot control language allows the user to create complex patterns of movement. The robot also can be controlled through a joystick. NOMAD plugs into the 64's user port and comes with its own power supply and a 25-foot cord.

An optional BASIC enhancement cartridge is available which adds NOMAD control commands such as AHEAD, BACK, LEFT, and RIGHT.

NOMAD has a suggested retail price of \$179.95. The BASIC cartridge retails for \$39.95.

64 Productivity Software

PFS:FILE and PFS:REPORT, previously available only for IBM and Apple computers, have

been released for the Commodore 64 by Software Publishing Corporation.

PFS:FILE works like a paper filing system, allowing the user to record, retrieve, update, and review information. Data can be organized on forms which are user-designed.

PFS:REPORT sorts, calculates, formats, and prints summary tables from the information in files created with *PFS:FILE*. It prints multiple columns per report, including three calculated columns.

Totals, subtotals, averages, subaverages, counts, and subcounts can be printed for every column. The software also has sorting capabilities, as well as automatic page numbering, title printing, and centering.

PFS:FILE retails for \$79.95. *PFS:REPORT* is available for \$69.95.

Real Estate Game, Hardware For VIC And 64

Real Estate 64, a Monopoly-type game with 3-D graphics for the Commodore 64, has been introduced by Handic Software.

The firm also has introduced Vic-Switch, a multi-user disk system for the VIC and 64; Super Box 64, an expansion unit for the 64; and a 300 baud modem.

Real Estate 64, available on disk for \$49.95, includes traditional Monopoly features such as buying streets, going to jail, chance, and the use of dice.

The Vic-Switch was developed for educational use, but can be used in any situation where more than one person needs access to the same disk or printer. Up to eight VIC-20s or C-64s can be hooked up to one Vic-Switch. All CPUs have access to disk drive and printer. Retail price is \$149.95.

The Super Box 64 allows up to three cartridges to be plugged in simultaneously. Other features include an IEEE interface, reset function, and multi-user capabilities. It retails for \$149.95.

The 300-baud modem (\$149.95) is switch controlled, allowing either originate or answer options. It connects to the user port of the VIC or 64.

VIC-20 Keyboard Program Module

Micromechanisms, Inc. has introduced a Keyboard Program Module which, when combined with a VIC-20, creates a multi-function ASCII encoded keyboard for use with more sophisticated computers.

The plug-in module does not physically modify the VIC-20, allowing the computer to continue to run applications and games. The module also con-

verts VIC function keys into special character codes required by the Wordstar word processor.

Suggested retail price is \$35.

Quality Electronics Inc.
Micromechanisms Division Inc.
P.O. Box 1150
112 Maple Avenue
Dublin, PA 18917
(215) 249-0331

The address and telephone numbers for Mosaic Electronics, maker of the Access-M memory expansion system for the Commodore 64, is P.O. Box 708, Oregon City, OR, 97045; (toll free) 1-800-2ADD-RAM or (503) 653-7885. The information was inadvertently omitted from the December *News & Products* section.

New Educational Software Series For The 64

Orbyte Software has introduced a line of 56 home educational software titles—*Challengeware*—for the Commodore 64.

Geared primarily for children from pre-school through upper elementary grades, the 110 programs are divided into nine areas: pre-school concepts, mathematics, grammar, science, social studies, economics, reading, foreign language, and logic and strategy.

The programs retail for \$39.95 each.

COMMODORE 64™
GETS AWAY FROM BASICS
with

*Oxford
Pascal*

FOR THE COMMODORE 64

From Limbic Systems, Inc. -- OXFORD PASCAL, developed by Oxford Computer Systems (Software), Ltd., creators of *PETSPEED-- the BASIC compiler recommended by Commodore.

OXFORD PASCAL OFFERS --

- Complete implementation of Standard Pascal
- This disk to disk compiler allows you to take full advantage of the Commodore 64's memory for Pascal programming.
- Operates with either single or multiple drives
- Extensions to Pascal include: chain, border, examine, include, peek, poke, voice, volume and much more.
- A comprehensive tutorial manual with many examples

MORE FEATURES FOR LESS MONEY... OXFORD PASCAL

VISA & MasterCard accepted

*PETSPEED is a trademark of Oxford Computer Systems (Software), Ltd.

Biofeedback, Utility Programs For 64

The *Stress Manager*, a biofeedback monitoring system, and *HomePak*, a utility program, have been introduced for the Commodore 64 by Batteries Included.

The *Stress Manager* allows home computer owners to assess their thought patterns and physiological impulses in order to gain an understanding of factors which contribute to stress.

It uses a galvanic skin resistance (G.S.R.) method to measure a user's vital statistics. A pair of fingertip pads measure fluctuations in the skin's electrical conductivity, and these impulses are transmitted to *The Stress Manager* for analysis.

After the results are interpreted, they are displayed on three graphs. Another feature is an audio cassette, which includes methods of relaxation and stress reduction.

Suggested retail price is \$79.95.

HomePak combines on one disk a telecommunications terminal program, an information management system, and a word processor for a suggested retail price of \$49.95.

Each of the *HomePak* programs is capable of reading files created by the others.

HomeTerm, the telecommunications program, features a text edit window which is available for simultaneous text creation and reception. The user can define screen color, text margins, word wrapping, and key clicking (each keystroke made audible with a beep). An on-screen clock keeps track of

the time elapsed since the user logged onto a bulletin board or information service.

HomeFind, the information manager program, features an English command structure to simplify use. Printed reports from *HomeFind* can be used by the *HomeText* word processing program.

HomeText features include the ability to set margins, indentations, line centering and spacing, and placement of headers, footers, and page numbers.

It also has the ability to delete portions of text and reinsert them at any point within the text body. *HomeText* is capable of supporting most major printing functions, including bold-face, underlining, and extended character width.

Batteries Included
3303 Harbor Blvd., Suite C9
Costa Mesa, CA 92626
(714) 979-0920

A scene from *Spitfire Ace*, a new flight simulation game from MicroProse.

Spitfire Ace For 64

MicroProse Software has announced *Spitfire Ace*, a World War II fighter pilot simulation game, for the Commodore 64.

Players maneuver their aircraft through a series of fighter tactics, including aileron rolls, loops, split S's, and Immelmann turns, while engaged in an aerial dogfight.

Suggested retail price for *Spitfire Ace* is \$29.95.

MicroProse Software
10616 Beaver Dam Road
Hunt Valley, MD 21030
(301) 667-1151

Art Heist Game

The Heist, a disk-based game for the Commodore 64 which features 90 different booby trapped rooms, has been introduced by the MicroFun division of MicroLab.

The rooms are on three different levels of an art gallery, and super spy Graham Crackers

must maneuver through them in order to steal the gallery's entire collection.

Terrorists have hidden doomsday plans, concealed on a microdot, on one of the pieces of art in the gallery. You must find it in time to avoid destruction.

Suggested retail price is \$35.

MicroFun
2699 Skokie Valley Road
Highland Park, IL 60035
(312) 433-7550

Commodore Voice Command Module

ENG Manufacturing, Inc. has introduced Chirpee, a module which allows Commodore computers to receive and interpret selected commands.

According to product developers, Chirpee can accept commands spoken in any language because of its phonetic recognition ability, and can be trained to respond to one voice, or a number of voices.

Suggested retail price for Chirpee is \$179.95.

ENG Manufacturing, Inc.
4304 W. Saturn Way
Chandler, AZ 85224
(602) 961-0165

64 Math Game

Divex, a math game designed to improve children's understanding of multiplication and division, has been introduced by Intelligence Quest Software, a

division of The Avalon Hill Game Company.

The game contains three difficulty levels. The player, at the controls of a laser cannon, must choose between correct and incorrect answers by destroying the wrong answers before they can touch down.

In all cases, when the player destroys a correct answer by mistake, the computer will sound out and flash the correct answer on the screen.

Divex is designed for children 8-12 years old. Suggested retail price is \$16 for the cassette version, and \$21 for the disk.

Intelligence Quest Software
The Avalon Hill Game Company
4517 Harford Road
Baltimore, MD 21214
(301) 254-5300

64 Advertising Display Program

AdvertiserOne, a program to display user-designed messages on the Commodore 64, has been announced by MicroAds.

The display messages are generated and maintained with the Commodore 64's standard screen editor. Displays can be based on message files and a standard command file which comes with the system, or with a user-created command file that can control the sequence, color, and text of the displays.

Message display features include: heading, subheading, and main message areas; ability to

change heading, subheading, and main message text at any time; use of multiple message text and background colors; automatic text centering; and sprite graphic designs.

Suggested retail price is \$19.95.

Typing Program For 64

Typetown Races, a touch typing tutorial for the Commodore 64, has been introduced by Softech.

The program, first in a series of self-improvement packages from Softech, contains more than 100 lessons, all of which are designed to teach touch typing. Included are the complete upper- and lowercase alphabetic, numeric, and special character keys. Users can progress at their own speed.

Typetown Races is available on disk for \$24.95.

BRITISH INTELLIGENCE

INTRODUCES GAMES WITH INTELLIGENCE - AND FREE WORD PROCESSING !!!

From now until Christmas we are giving all of our customers a Christmas present. Every program we sell for the 64, IBM, VIC20 or TRS80 Color will include a free copy of Maxi-Pro - the handiest and easiest to use word processor available. Last year Maxi-Pro's sold for \$29.95. This year it is FREE with all British Intelligence Programs.

DUNGEONS OF MAGDARR - Serious D of D for up to 8 players. Features full 3d GRAPHICS! You get a choice of several characters that grow from game to game and are interchangeable with characters from our famous Dungeons of Death game. A real dungeon with level after level of monsters to conquer and treasures to find - all in hi-res 3d graphics.

Available On: TRS80C, IBM PC, CM064

TAPE \$19.95

DISK \$24.95

QUEST - A different kind of Graphic Adventure. It is played on a computer generated maze of Alesia. You'll have to build an army and lead them through combat, bargaining, exploration of ruins and temples, and outright banditry! Takes 2 - 5 hours to play and is different each time.

Available On: TRS80C, IBM, CM064, VIC20, IBM PC, T199, T199 EXT, BASIC, IBMPC

TAPE \$14.95

DISK \$19.95

PYRAMID - ONE OF THE TOUGHEST ADVENTURES. Average time through the pyramid is 50 - 70 hours. Clues are everywhere and some ingenious problems make this popular around the world FULL GRAPHIC ADVENTURE.

Available On: TRS80C, IBM, CM064, VIC20, IBM PC

TAPE \$19.95

DISK \$24.95

TOO NEW FOR PICTURES !!

In a last minute Christmas coup, British Intelligence has snagged the rights to Europe's most popular graphic Adventures. **BASTOW MANOR**: A cult game in Europe and Australia. **SUPER BLUETH**: A Sherlock Holmes type Adventure. **NUCLEAR-WARGAMES**: A supercomputer wants to start WW III.

Phone or write for complete descriptions. Available on Commodore 64 Only. Tape or Disk \$19.95

MARS - Your ship crashed on the Red Planet and you have to get home. You will have to explore a Martian City, repair your ship, and deal with possibly hostile aliens to get home again. This is recommended as a first Adventure. It is in no way simple - playing time normally runs from 30 to 50 hours, but it lets you try out Adventuring before you battle the really tough ones. Full Graphics Adventure.

Available On: TRS80C, CM064, IBM PC

TAPE \$19.95

DISK \$24.95

BAG-IT-MAN - The ultimate arcade game for TRS80C or MCD64. This one has three screens full of BAGS OF GOLD, CARTS & ELEVATORS TO RIDE IN, MINE SHAFTS, and TWO NASTY GUARDS. Great sound and color and continuous excitement.

Available On: TRS80C, CM064

TAPE \$19.95

DISK \$24.95

SOFTWARE PRICES ARE DROPPING!

How To Type In COMPUTE!'s GAZETTE Programs

Each month, COMPUTE!'s GAZETTE publishes programs for the VIC-20, Commodore 64, Plus 4, and 16. Each program is clearly marked by title and version. Be sure to type in the correct version for your machine. Also, carefully read the instructions in the corresponding article. This can save time and eliminate any questions which might arise after you begin typing.

We publish two programs, appearing in alternating months, designed to make your typing effort easier: The Automatic Proofreader, and MLX, designed for entering machine language programs.

When entering a BASIC program, be especially careful with DATA statements as they are extremely sensitive to errors. A mistyped number in a DATA statement can cause your machine to "lock up" (you'll have no control over the computer). If this happens, the only recourse is to turn your computer off then back on, erasing whatever was in memory. So be sure to *save a copy of your program before you run it*. If your computer crashes, you can always reload the program and look for the error.

Special Characters

Most of the programs listed in each issue contain special control characters. To facilitate typing in any programs from the GAZETTE, use the following listing conventions.

The most common type of control characters in our listings appear as words within braces: {DOWN} means to press the cursor down key; {5 spaces} means to press the space bar five times.

To indicate that a key should be *shifted* (hold down the SHIFT key while pressing another key), the

character is underlined. For example, A means hold down the the SHIFT key and press A. You may see strange characters on your screen, but that's to be expected. If you find a number followed by an underlined key enclosed in braces (for example, {8 A}), type the key as many times as indicated (in our example, enter eight SHIFTed A's).

If a key is enclosed in special brackets, $\text{\textcircled{A}}$, hold down the Commodore key (at the lower left corner of the keyboard) and press the indicated character.

Rarely, you'll see a single letter of the alphabet enclosed in braces. This can be entered on the Commodore 64 by pressing the CTRL key while typing the letter in braces. For example, {A} means to press CTRL-A.

The Quote Mode

Although you can move the cursor around the screen with the CRSR keys, often a programmer will want to move the cursor under program control. This is seen in examples such as {LEFT}, and {HOME} in the program listings. The only way the computer can tell the difference between direct and programmed cursor control is the *quote mode*.

Once you press the quote key, you're in quote mode. This mode can be confusing if you mistype a character and cursor left to change it. You'll see a reverse video character (a graphics symbol for cursor left). In this case, you can use the DELETE key to back up and edit the line. Type another quote and you're out of quote mode. If things really get confusing, you can exit quote mode simply by pressing RETURN. Then just cursor up to the mistyped line and fix it.

The Automatic Proofreader

"The Automatic Proofreader" will help you type in program listings from COMPUTE!'s Gazette without typing mistakes. It is a short error-checking program that hides itself in memory. When activated, it lets you know immediately after typing a line from a program listing if you have made a mistake. Please read these instructions carefully before typing any programs in COMPUTE!'s Gazette.

Preparing The Proofreader

1. Using the listing below, type in the Proofreader. The same program works on both the VIC-20 and Commodore 64. Be very careful when entering the DATA statements — don't type an I instead of a 1, an O instead of a 0, extra commas, etc.

2. SAVE the Proofreader on tape or disk at least twice before running it for the first time. This is very important because the Proofreader erases this part of itself when you first type RUN.

3. After the Proofreader is SAVED, type RUN. It will check itself for typing errors in the DATA statements and warn you if there's a mistake. Correct any errors and SAVE the corrected version. Keep a copy in a safe place — you'll need it again and again, every time you enter a program from COMPUTE!'s Gazette.

4. When a correct version of the Proofreader is RUN, it activates itself. You are now ready to enter a program listing. If you press RUN/STOP-RESTORE, the Proofreader is disabled. To reactivate it, just type the command SYS 886 and press RETURN.

Using The Proofreader

All VIC and 64 listings in COMPUTE!'s Gazette now have a checksum number appended to the end of each line, for example "rem 123". Don't enter this statement when typing in a program. It is just for your information. The rem makes the number harmless if someone does type it in. It will, however, use up memory if you enter it, and it will confuse the Proofreader, even if you entered the rest of the line correctly.

When you type in a line from a program listing and press RETURN, the Proofreader displays a number at the top of your screen. This checksum number must match the checksum number in the printed listing. If it doesn't, it means you typed the line differently than the way it is listed. Immediately recheck your typing. Remember, don't type the rem statement with the checksum number; it is published only so you can check it against the number which appears on your screen.

The Proofreader is not picky with spaces. It will not notice extra spaces or missing ones. This is for your convenience, since spacing is generally not important. But occasionally proper spacing is important, so be extra careful with spaces, since the Proofreader will catch practically everything else that can go wrong.

There's another thing to watch out for: if you enter the line by using abbreviations for commands, the checksum will not match up. But there is a way to make the Proofreader check it. After entering the line, LIST it. This eliminates the abbreviations. Then move the cursor up to the line and press RETURN. It should now match the checksum. You can check whole groups of lines this way.

Special Tape SAVE Instructions

When you're done typing a listing, you must disable the Proofreader before SAVEing the program on tape. Disable the Proofreader by pressing RUN/STOP-RESTORE (hold down the RUN/STOP key and sharply hit the RESTORE key). This procedure is not necessary for disk SAVES, but you must disable the Proofreader this way before a tape SAVE.

SAVE to tape erases the Proofreader from memory, so you'll have to LOAD and RUN it again if you want to type another listing. SAVE to disk does not erase the Proofreader.

Since the Proofreader is a machine language program stored in the cassette buffer, it will be erased during a tape SAVE or LOAD. If you intend to type in a program in more than one sitting or wish to make a safety SAVE, follow this procedure:

1. LOAD and RUN the Proofreader.
2. Disable it by pressing RUN/STOP-RESTORE.
3. Type the following three lines in direct mode (without line numbers):

```
A$="PROOFREADER.T":B$="[10 SPACES]":FO
RX=1TO4:A$=A$+B$:NEXTX
FORX=886 TO 1018:A$=A$+CHR$(PEEK(X)):N
EXTX
OPEN1,1,1,A$:CLOSE1
```

After you type the last line, you will be asked to press RECORD and PLAY. We recommend you start at the beginning of a new tape.

You now have a new version of the Proofreader (PROOFREADER.T, as renamed in the above code). Turn your computer off and on, then LOAD the program you were working on. Put the cassette containing PROOFREADER.T into the tape unit and type:

OPEN1:CLOSE1

You can now get into the Proofreader by typing SYS 886. To test this, PRINT PEEK (886) should return the number 173. If it does not, repeat the steps above, making sure that A\$ (PROOFREADER.T) contains 13 characters and that B\$ contains 10 spaces.

The new version of Automatic Proofreader will load itself into the cassette buffer whenever you type OPEN1:CLOSE1 and PROOFREADER.T is the next program on your tape. It will not disturb the contents of BASIC memory.

Automatic Proofreader For VIC And 64

Bug-Swatter:

Modifications And Corrections

• Programs 2 and 3 from "Machine Language For Beginners" (November 1984) were inadvertently omitted from the "Program Listings" section. They are the BASIC loader programs (the equivalent of the source code included in the article) which were mentioned on page 132. The two programs follow:

VIC Memory Display

```
800 FOR ADRES=830TO859:READ DATTA
810 POKE ADRES,DATTA:NEXT ADRES
830 DATA 169, 5, 160, 0, 153, 0
836 DATA 148, 153, 0, 149, 136, 208
842 DATA 247, 162, 0, 181, 0, 157
848 DATA 0, 16, 189, 0, 2, 157
854 DATA 0, 17, 202, 76, 77, 3
```

64 Memory Display

```
800 FOR ADRES=830TO877:READ DATTA
810 POKE ADRES,DATTA:NEXT ADRES
830 DATA 169, 7, 160, 0, 153, 0
836 DATA 216, 153, 0, 217, 153, 0
842 DATA 218, 153, 0, 219, 136, 208
848 DATA 241, 162, 0, 181, 0, 157
854 DATA 0, 4, 189, 0, 2, 157
860 DATA 0, 5, 189, 0, 208, 157
866 DATA 0, 6, 189, 0, 220, 157
872 DATA 0, 7, 202, 76, 83, 3
```

• Last month, we published a suggestion from a reader in Gazette Feedback ("An End To Disk Drive Chatter"). Several readers called to inform us that it sometimes doesn't work with *Easy Script*, and that their drives wouldn't read any files even after turning the drive off and on. No cause for alarm, however. We duplicated the problem once, and the drive locked up (although subsequent tests worked fine, eliminating disk drive chatter). Although the suggested technique works with most commercial programs, if your drive should lock up, the solution is to initialize the drive with this command:

```
OPEN15,8,15,"10":CLOSE15.
```

• The article for "Screen-80" (September 1984) stated that the program was compatible with the terminal software packaged with the 1650 Automodem. It is compatible, except that you can't use the function keys to change terminal parameters. If you want to be able to change parameters, follow this procedure:

1. Load 64 Term

2. Type this line (in immediate mode):

```
POKE44,64:POKE 16384,0:NEW
```

3. Enter this short program to modify 64 Term:

```
10 FOR T=4634TO4644:READD:POKET,D:NEXT
20 DATA 32,198,2,169,14,32,210,255,76,229,14
30 POKE2283,76:POKE2284,26:POKE2285,18
40 POKE45,38:POKE46,18:POKE44,8:CLR
```

If the label on your terminal software says *Autoterm*, don't use the above program. Instead, enter this one:

```
10 FOR T= 5633TO5643:READD:POKET,D:NEXT
20 DATA 32,198,2,169,14,32,210,255,76,87,16
30 POKE2664,76:POKE2665,1:POKE2666,22
40 POKE45,13:POKE46,22:POKE44,8:CLR
```

4. Type RUN. The above program makes some modifications to 64 Term.

5. Save this new version to a new disk or tape (be sure to keep the original 64 Term).

Once you've created the new 64 Term, you can load and run Screen-80. Get out of 80-column mode with RUN/STOP-RESTORE.

Next, load and run the modified 64 Term.

Change the parameters, using f4. When finished, press the E key. Instead of exiting to BASIC, you'll enter terminal mode (with 80-columns) with the new parameters set. We have tested these two modifications with different versions of 64 Term and Autoterm. There may, however, be other versions of these two programs, and Commodore may make changes in the future.

Readers might also note that our sister magazine, *COMPUTE!*, is planning to run a terminal program in the first few months of 1985. This program will be compatible with Screen-80, and can be used to access standard-ASCII bulletin boards and information networks.

• Reader Barry Friedman has pointed out an error in the "Gazette Feedback" item "PEEKing The Joystick" (November 1984). The example on page 12 should read IF (PEEK(56320)AND16)=0 THEN PRINT "FIRE". The "=0" is important because joystick movements turn bits off (making them zero) rather than turning them on.

• There are no errors in the "Turtle Graphics" programs from October 1984; however, the article contained some typographical errors on page 93, under "How It Works". The start of BASIC is moved up to \$4000, leaving \$0800-\$3FFF free (not \$0800-\$03FF). The sprite definitions do not go into the last 512 bytes of this free area—they are put into \$0E00-\$0FFF (decimal 3584-4095). ☺

Tiny MLX

For Unexpanded VIC-20

Machine Language Entry Program

Charles Brannon, Program Editor

Note To Readers

This is the final appearance of Tiny MLX in the Gazette. In order to better use space in the magazine and to help eliminate confusion for those typing in programs, all VIC machine language programs listed in MLX format will require VIC MLX. MLX, both VIC and 64 versions, will appear in alternate months. The use of VIC MLX requires 8K memory expansion, although expansion is often not required to run an MLX-entered VIC program (notes are always included in the article).

MLX is a labor-saving utility that allows almost fail-safe entry of machine language programs published in COMPUTE!'s GAZETTE. You need to know nothing about machine language to use MLX—it was designed for everyone. "Tiny MLX" is a special version for the unexpanded VIC.

MLX is a new way to enter long machine language (ML) programs with a minimum of fuss. MLX lets you enter the numbers from a special list that looks similar to BASIC DATA statements. It checks your typing on a line-by-line basis. It won't let you enter illegal characters when you should be typing numbers. It won't let you enter numbers greater than 255 (forbidden in ML). It won't let you enter the wrong numbers on the wrong line. In addition, MLX creates a ready-to-use tape or disk file.

Using MLX

Type in and save "Tiny MLX" (you'll want to use it in the future). When you're ready to type in an ML program, run Tiny MLX. Unlike regular MLX, Tiny MLX does not ask for the starting and ending address of the program to be entered. Instead, this information must be included in line 210. The values currently shown in line 210 are for the "Kablam!" program in this issue. It's also necessary to change lines 100 and 763 to use Tiny MLX with Kablam!, so be sure to check these lines if you're using an earlier version of

Tiny MLX. Refer to the article on page 60 for details.

You'll see a prompt corresponding to the starting address. The prompt is the current line you are entering from the listing. It increases by six each time you enter a line. That's because each line has seven numbers—six actual data numbers plus a *checksum number*. The checksum verifies that you typed the previous six numbers correctly. If you enter any of the six numbers wrong, or enter the checksum wrong, the computer rings a buzzer and prompts you to reenter the line. If you enter it correctly, a bell tone sounds and you continue to the next line.

MLX accepts only numbers as input. If you make a typing error, press the INST/DEL key; the entire number is deleted. You can press it as many times as necessary back to the start of the line. If you enter three-digit numbers as listed, the computer automatically prints the comma and goes on to accept the next number. If you enter less than three digits, you can press either the comma, space bar, or RETURN key to advance to the next number. The checksum automatically appears in reverse video for emphasis.

MLX Commands

When you finish typing an ML listing, you can then save the completed program on tape or disk. Follow the screen instructions. If you get any errors while saving, you probably have a bad disk, or the disk is full, or you made a typo when entering the MLX program itself.

Since Tiny MLX has no provisions for reloading a partially completed program, you must enter the ML program all in one sitting.

See program listing on page 173.

**All programs listed
in this magazine
are available on
the GAZETTE Disk.
See elsewhere in
this issue for details.**

Telecommunications Software

The listing below is the second half of the C/G Bulletin Board System. Part 1 and the article with instructions on use were published last month. Do not enter Part 2 until you have completed typing in Part 1 and you understand the procedure as outlined in the Commands section of the MLX article published last month. Load MLX, and use a starting address of 2049 and an ending address of 17828. Then type SHIFT-L to load Part 1 and begin entering the listing below.

Note To Readers And Disk Subscribers

The C/G Bulletin Board as listed in this and the December issues, and as published on the December disk, runs as expected. However, the board can crash if a caller dials the board and hangs up before connecting. We have corrected this problem on the January disk and will publish the correction in next month's "Bug-Swatter." Those typing the program in should not hesitate to continue as the correction will POKE several new values into the final program. Non-disk subscribers who would rather not wait may write or call for the correction.

Also note that all user IDs must start with 1001. They can then run up to 1999. As the system operator, your built-in ID is 1000, but you can't create a user file with this number.

C/G Bulletin Board, Part 2

To Order By Mail — Send personal check, money order, or certified check. For fastest service send money order or certified check. Allow 2 weeks for personal checks to clear.
Shipping & Terms — Add \$2.50 per order for shipping software and accessories. Add \$6.00 per order for COD. Add \$10.00 to ship printers and disk drives. \$8.00 to ship monitors. COD orders not accepted on printers and monitors. Foreign orders, APO, FPO, AK, and HI require additional amounts for shipping. We pay shipping on backorders. Orders shipped UPS unless noted otherwise. All prices reflect cash discount. Visa, Mastercard add 3%. Manufacturer's warranty honored with our invoice and original packaging. PA residents add 6% sales tax. Prices subject to change.

COMPUTE!'s Gazette for Commodore AUTHOR GUIDE

COMPUTE!'s Gazette for Commodore is looking for interesting, useful articles aimed at beginning to intermediate VIC-20 and Commodore 64 users. If you have an article idea or a good original program, we'd like to see it. Don't worry if you are not a professional writer. We are more concerned with the content of an article than its style. Simply try to be clear in your writing and check your program for any bugs.

COMPUTE!'s Gazette for Commodore is a consumer-oriented magazine for VIC-20 and Commodore 64 users who want to get the most out of their computers in a non-technical way. It is aimed primarily at home users, not all of whom necessarily want to become expert programmers. If your article covers a more advanced or technical topic, you may choose to submit it to our companion publication, **COMPUTE!**. If you submit an article to one of our magazines and we believe it would be more suitable to the other, we will transfer your submission to the right editors. The basic editorial requirements for publication are the same for both magazines; so are the payment rates.

The following guidelines will permit your good ideas and programs to be more easily edited and published. Most of these suggestions serve to improve the speed and accuracy of publication:

1. The upper left corner of the first page should contain your name, address, telephone number, and the date of submission.
2. The following information should appear in the upper right corner of the first page. If your article is specifically directed to either the VIC-20 or Commodore 64, please state which one. In addition, please indicate the memory requirements of programs.
3. The underlined title of the article should start about 2/3 of the way down the first page.
4. Following pages should be typed normally, except that in the upper right corner there should be an abbreviation of the title, your last name, and the page number. For example: Memory Map/Smith/2.
5. Short programs (under 20 lines) can easily be included within the text. Longer programs should be separate listings. *It is essential that we have a copy of the program, recorded twice, on a tape or disk.* The tape or disk should be labeled with your name and the title of the article. Tapes are fairly sturdy, but disks need to be enclosed within plastic or cardboard mailers (available at photography, stationery, or computer supply stores).

It is far easier for others to type in your program if you use CHR\$(X) values and TAB(X) or SPC(X) instead of cursor manipulations to format your output. For five carriage returns, `FOR I=1 TO 5:PRINT:NEXT I` is far more "portable" to other computers with other BASICs and also easier to type in. And, instead of a dozen right-cursor symbols, why not simply use `PRINT SPC(12)?` A quick check through your program –

making these substitutions – would be greatly appreciated by your editors and by your readers.

6. If your article is accepted and you have since made improvements to the program, please submit an entirely new tape or disk and a new copy of the article reflecting the update. We cannot easily make revisions to programs and articles. It is necessary that you send the revised version as if it were a new submission entirely, but be sure to indicate that your submission is a revised version by writing "Revision" on the envelope and the article.

7. All lines within the text of the article should be spaced so that there is about 1/2 inch between them. A one-inch margin should be left at the right, left, top, and bottom of each page. No hyphens should be used at the ends of lines to break words. And please do not justify. Leave the lines ragged.

8. Standard typing paper should be used (no onionskin or other thin paper) and typing should be on one side of the paper only (upper- and lowercase).

9. Sheets should be attached together with a paper clip. Staples should not be used.

10. A good general rule is to spell out the numbers zero through ten in your article and write higher numbers as numerals (1024). The exceptions to this are: Figure 5, Table 3, TAB(4), etc. Within ordinary text, however, the zero through ten should appear as words, not numbers. Also, symbols and abbreviations should not be used within text: use "and" (not &), "reference" (not ref.), "through" (not thru).

11. For greater clarity, use all capitals when referring to keys (RETURN, TAB, ESC, SHIFT), BASIC words (LIST, RND, GOTO), and three languages (BASIC, APL, PILOT). Headlines and subheads should, however, be initial caps only, and emphasized words are not capitalized. If you wish to emphasize, underline the word and it will be italicized during typesetting.

12. COMPUTE!'s Gazette for Commodore pays between \$75 and \$1000 for published articles. In general, the rate reflects the length and quality of the article. Payment is made upon acceptance of an article. Following submission (Editorial Department, COMPUTE!'s Gazette for Commodore, P.O. Box 5406, Greensboro, NC 27403) it will take from four to six weeks for us to reply. If your work is accepted, you will be notified by a letter which will include a contract for you to sign and return. Rejected manuscripts are returned to authors who enclose an SASE. We do not consider articles which are multiple submissions. If you wish to send an article to another magazine for consideration, please do not submit it to us.

13. Articles can be of any length – from a single-line routine to a multi-issue series. The average article is about four to eight double-spaced, typed pages.

14. If you want to include photographs, they should be 5x7, black-and-white glossies.

1541 FLASH!

It's No Flash in the Pan

The new Skyles Electric Works 1541 Flash! Commodore 64 three times faster than an unenhanced Commodore single disk drive with an IEEE interface. It gives your 1541 disk drive the speed of much more expensive drives—at three times its normal speed! The 1541 Flash! is faster than the MDS disk drives and any parallel interface faster than the Commodore 2031. The Skyles Electric Works 1541 Flash! is one of the most exciting time-saving devices we've ever seen.

■ It's Permanent

The Flash! is a permanent firmware installation in your Commodore 64 and 1541 disk drive. It has both a software (ROM) and a hardware component.

■ It's Transparent

Best of all, the 1541 Flash! is transparent. Computer operations all remain unaffected as it speeds up every disk-related function. And there is nothing new to learn for the Flash! No special tricks or techniques. Once it's in, just watch it go. We have tested it on well over one hundred programs and it loads spectacularly fast.

■ It's Flexible

And it's flexible. The 1541 Flash! adds 21 extra commands for the Commodore 64 user. These include a built-in "DOS WEDGE," eight editing and fast-transfer commands for the advanced programmer. Here is an example of what it can do: For programs that usually load with a "wait" command, just hit Shift/Run-Stop. A large spreadsheet program like **BUSICALC 3** then loads in about 25 seconds. Through keyboard commands or a hardware "off" switch, you can even return to the old, slow loading method, if for some reason you really want to. Or you can ignore all its commands, and just enjoy the speedy disk operations.

■ It's Serious

But if you are really serious about programming, the 1541 Flash! is a gold mine. For example, the manual will show you how to write software allowing data transfer to and from the disk drive at speeds up to 10 times the normal.

■ It's Easy

Installation of the 1541 Flash! consists of plugging a small assembly inside the Commodore 64 and two small assemblies plug into the Commodore 1541. Except for a small percentage of Commodore 64s, no soldering is required. Assembly instructions include detailed pictures and drawings. And installation is—well, a flash.

■ It's Available

Call Skyles Electric Works to place your order or to get more info on the 1541 Flash! Hurry up, though. They may be gone before you know it. **1541 FLASH! C-64/1541 \$89.95***

*There is an additional \$3.50 US and Canada, \$10.00 Europe and Asia, shipping charge per order. California residents add sales tax.

For CBM-64 and VIC owners only:

This is just 1 of 20 pages of the newest and biggest Skyles catalog, hot off the press.

We know you'll want this page, in its full 7 x 10 splendor, and another 19 pages of peripherals, software and books that will make your CBM-64 or VIC computer even nicer to live with. So, if we missed

sending you your very own copy within the last few weeks, call us at **(800) 227-9998** (unless you live in California, in which case call **(415) 965-1735**).

From Skyles Electric Works, the oldest and largest professional specialists in the business.

A Printer For All Reasons!

The GP-550-CD is an extra high quality graphic printer that offers both standard dot matrix printing and near letter quality printing all in a single unit.

FEATURES:

- Two print modes: Data Processing (DP) mode, Near Letter Quality (NLQ) mode.
- Lower noise level.
- High cost-performance.
- Two matrix configurations: 9 (H) x 8 (V) dots in DP mode; 9 (H) x 16 (V) dots in NLQ mode.
- Capable of printing 140 different characters: 96 ASCII characters plus 44 European characters and symbols.
- Various character modes for special effects: DP mode: Pica, Elite, Condensed NLQ mode: Pica, Elite, Italic Cursive, Superscript, Subscript and Proportional.
- Graphic printing of vertical 8-dot or 16-dot graphic data.

PRINTING MODE	DOT MATRIX (H x V) & SPACES	NUMBER OF COLUMNS	PRINT SPEED (CPS)	CHARACTER SPACING (CPI)	PASS
DP Mode:					
Pica	9 x 8 + 3	80	50	10	1
Elite	9 x 8 + 1	96	60	12	1
Condensed	5 x 8 + 2	136	86	17	1
NLQ Mode: NOTE: There is expanded (double-width) printing function in every character mode.					
Pica	9 x 16 + 3	80	25	10	2
Elite	9 x 16 + 1	96	30	12	2
Proportional	N x 16	—	—	—	2
Super/Subscript	5 x 8	136	43	17	2
Italic Cursive	12 x 16	80	25	10	2
Line Spacing 6, 8, 7½, 12, or N/120 (N = 0-99) lines per inch.					
Paper Feed Pin-feed and friction-feed (single sheet)					
Paper Width Adjustable from 4.5 to 10 inches (fanfold paper)					
Paper Type Fanfold or cutsheet paper					
Ribbon Single color, special self-inking cassette					
Dimensions 12" (D) x 16.5" (W) x 4.5" (H) (including paper separator)					
Printing Method Two-hammer					
Printing Format 9 x 8 (DP); 9 x 16 (NLQ)					
Character Kinds 96 ASCII + 44 characters and symbols					
Graphics Arbitrary combination of 8 dots or 16 dots.					
Multiple Copies 3 including original					

1 year parts & labor warranty

DITTODISK-64™

NEW

VIC & 64

DITTODISK 64 is a utility program that has been tested and found to be capable of copying most protected disks produced by the major software houses. A notable attribute of this copy program is its lack of a large manual. There are no menus and no disk analysis routines. The screen prompts will be all that you'll need to get you through 99% of your copying.

BE A COPY C.A.D. (CASSETTE AIDED DUPLICATOR) NOW YOU CAN MAKE BACKUP COPIES OF ALL THE COSTLY, NON-SAVEABLE CASSETTE PROGRAMS YOU BOUGHT.

OUR BACKUP V1.0 UTILITY PROGRAM WILL LET YOU MAKE DUPLICATES THAT RUN.

BACKUP V1.0 WILL WORK WITH A STANDARD 5K UNEXPANDED VIC. MEMORY EXPANSION IS REQUIRED TO COPY PROGRAMS LONGER THAN 3K BYTES.

COMPUTEREYES™

VIDEO IMAGES ON YOUR COMMODORE!

Finally... an inexpensive way to capture real-world images on your Commodore's Helix display! COMPUTEREYES™ is an innovative, slow-scan device that connects between any standard video source (video tape recorder, video camera, videodisk, etc.) and the Commodore's User I/O Port. Under simple software control, a live image is acquired in less than five seconds. A unique multi-screen mode also provides realistic, grey-scale images. Hundreds of applications!

Package includes interface module, complete disk to use software support on disk or tape (specify), owner's manual, and one year warranty. COMPUTEREYES™ is available from your dealer or direct from DIGITAL VISION for just \$129.95 plus \$4.00 S&H (USA).

Also available as a complete package including:
• COMPUTEREYES™
• Quality 512K video camera
• Connecting cable
for only \$349.95 plus \$9.00 S&H

Demo disk available for only \$10.00 (postpaid)

Mass. residents add 5% sales tax. Mastercard, Visa accepted. To order, or for more information, write or call:

Screen dumps of actual COMPUTEREYES™ images.

Also available for Apple II series.

TAX AID

FOR COMMODORE 64™ and VIC 20™

TAX AID

USE TAX AID

TO PREPARE YOUR INCOME TAX RETURN

■ Developed by an experienced accounting firm, TaxAid is accurate, easy to use, and comes with a detailed manual. Your tax data is permanently stored on tape or disk. The cost is tax deductible and low cost yearly updates are available. ■ TaxAid is menu driven with advanced editing features and will prepare any IRS form 1040. Calculations are automatic and all tax tables including income averaging are built in. Results can be directed to the monitor or the printer.

Call or write for complete brochure

THE AMAZING VOICE MASTER

- Record & playback speech in your own voice
- Recognize your spoken commands
- Hum or sing to compose or play music in real time — notes and chords!

All this and more for only: **\$89.95** Add \$4.00 for shipping & handling

You won't believe it until you hear it!

ASK YOUR DEALER NOW FOR A VOICE MASTER DEMONSTRATION

Or call (503) 342-1271 for a telephone demonstration and receive a FREE audio cassette demo tape.

Note: Early Voice Masters have trade in value! Call for details.

COVOX INC.

675-D Conger St., Eugene, OR 97402
Telex 706017 (AV ALARM UD)

Now there's PASCAL for the Commodore 64. And at a mini price.

Kyan PASCAL is a full-featured implementation of PASCAL — not a subset! With these features:

- ☐ high-performance compiler and comprehensive set of error messages for faster debugging
- ☐ speeds up to 40 times faster than Commodore Basic
- ☐ built-in full screen editor
- ☐ support for files, pointers, record types, sets and ordinal types used in sophisticated data structures.
- ☐ plus, a comprehensive tutorial manual illustrating the speed and power of PASCAL through sample programs.

Kyan PASCAL lets you develop programs on your Commodore 64 that are transportable to most mainframes. So it's perfect for students and working at home.

Try it for 15 days.

Order Kyan PASCAL, and if you're not completely satisfied, return the diskette and manual within 15 days for a full refund.

Kyan PASCAL with complete tutorial manual . . . \$49.95
(Add \$4.50 per copy for postage and handling. \$9.50 outside North America. California residents add 6.5% sales tax.)

To order, call 415/775-2923.

(VISA and MasterCard accepted.)

Or send check or money order to: **Kyan Software, Suite 183, 1850 Union Street, San Francisco, CA 94123.** Sorry, no C.O.D. orders accepted.

kyan

NEXUS: A Commodore computer user's group providing low-cost distribution of Public Domain software.

Each member receives, upon joining, a directory diskette containing: Listings of all programs offered

CURRENT CATEGORIES: Business, Graphics, Languages, Education, Math & Science, Sound, Telecommunications, Utilities, Miscellaneous and, of course Games.

- TPUG Members can access entire TPUG library.
- Associate members receive directory disk, quarterly updates (on disk), and access to our regular BBS for \$25/yr.
- Full members receive same as Associates PLUS access to our **TOLL-FREE BBS**. Fees vary according to when the Full member wishes to access the BBS. The periods of access are Night/Weekend, Evening, and Day as defined by the telephone company. In addition, EVE members get N/W access, and DAY members get EVE & N/W access. Fees are N/W — \$50/yr, DAY — \$65/yr.
- Members can earn **BONUS** points to be applied to the purchase of software disks.

Address: **NEXUS**

3547 Brookview Drive
Lexington, KY 40503

Phone: (606) 272-0276 (VOICE)
(606) 272-6340 (MODEM)

Payment by check, money order, Mastercard, VISA & American Express.

All software disks are tailored to the desires of the member. Compare what we offer with what other PD software distributors offer. They sell everyone the same disk containing the same software whether you want it or not.

PEEK A BYTE™ 64

A DISK AND MEMORY EDITOR

Peek A Byte is more than a disk editor - it features a C-64 memory display in HEX, ASCII, or screen code and a full page editor with cursor control. **YOU CAN PEEK A BYTE...**

Change file or disk names, recover "lost" programs, compare disk data, display free sector map, convert HEX/decimal, read disk drive memory, disassemble disk or memory data, print most screen displays... and much more!

IT'S EASY TO USE!

All commands are simple, easy to remember keystrokes and HELP screens are always available. Complete error handling for key entries and disk read/write errors. Tutorial manual for beginners and pros!

PEEK A BYTE IS FAST ML CODE

Above BASIC and compatible with many BASIC programs, ML routines, and the DOS Wedge 5.1. Doesn't "lock up" the computer.

QUANTUM SOFTWARE

P.O. Box 12716, Dept. 4
Lake Park, Florida 33403

PEEK A BYTE is a trademark of Quantum Software.

To order send check or money order, US funds. Foreign add \$4 for shipping and handling. Florida residents add 5% sales tax. For US COD orders add \$2. Phone orders call (305) 840-0249.

FREE! CONVERSION TABLES for converting between HEX, decimal, high decimal, binary, characters, and BASIC tokens. Send a self-addressed, \$2.00 stamped business envelope for info.

TURBO 64

\$19.95

Turbo 64 will turn your 1541 into a super fast and efficient disk drive. Loads programs five to eight times faster, works with 99% of your basic and machine language programs. The master disk allows you to put unlimited Turbo 64 boot copies on all your disks. This disk also includes:

Auto Run Boot Maker

Auto Run Boot Maker will load and auto run your basic or machine language programs.

\$19.95

DMS-Errors 20,21,22,23,27 & 29
Format Single Tracks
Read Disk Errors

1/2 Track Reader-read and select
1/2 track.

1/2 Track Formatter-Format a
disk with 1/2 tracks. This is
where the next protection
schemes are coming from.

Drive Mon-Disk Drive
assembler/disassembler. For
your 1541.

The Doc-Disk Doctor that reads
code under errors.

Sync Maker-Place a sync mark
on any track out to 41. Also
used for protection.

Sync Reader-Check for Sync
bits on any track out to 41.

Change Drive No.-Changes
drive number (7-30).

Disk Logger-Finds starting track,
sector, start and end addresses.

Disk Match-Compare any two
diskettes. Byte for Byte.

New Wedge-Easier to use DOS
wedge.

ID Check-Check ID's on any
track.

Unscratch-Restore a scratched
file.

View RAM-Visual display of the
free and used sectors on a
diskette.

Read/Write Test-1541
performance test.

Repair a track-Repair a track
with checksum errors. Reads
code under errors and restores
track.

Fast Format-Format a disk in
just 10 seconds (with verify!).

WAR GAMES AUTODIALER

- 1-Auto Dial will automatically dial a set of numbers you choose.
- 2-Review Numbers will review numbers that were answered by a computer.
- 3-Save Numbers will save numbers where a computer answered.
- 4-Hardcopy of Numbers will print out list of numbers where a computer answered.
- 5-LOAD Numbers will load in numbers to continue where it left off.
- 6-Continue will pick up dialing where it was interrupted.

\$29.95

GEMINI BIT COPIER

99.9% Effective!

- 3 Minute copy program-
- Copies Bit by Bit
- Eliminates worries of all Commodore DOS errors
- Very simple to use
- Half tracks
- 100% machine language
- Will not knock disk drive
- Copies quickly
- Writes errors automatically 20,21,22,23,27 & 29
- Errors are automatically transferred to new disk

- Copies identical syncs
- Supports use of two disk drives
- Unlocks disks to make your actual copies
- No need to worry about extra sectors
- This program covers all the latest protection schemes.

\$29.95

SOFTWARE PROTECTION HANDBOOK

This book "BLOWS THE LOCKS OFF" protected DISKS, CARTRIDGES, and TAPES! Protection "secrets" are clearly explained along with essential information and procedures to follow for breaking protected software. An arsenal of protection breaking software is included with all listings, providing you with the tools needed! Programs include high speed error check/logging disk duplicator... disk picker... disk editor... Cartridge to disk/tape saver and several others for error handling and advanced disk breaking. The cartridge methods allow you to save and run cartridges from disk or tape! The tape duplicator has never been beaten! This manual is an invaluable reference aid including computer and disk maps, as well as useful tables and charts. (212 pages 11 programs)

CONVERSE WITH YOUR COMPUTER

AT LAST! A FULL IMPLEMENTATION of the original ELIZA program is now available to run on your Commodore 64!

Created at MIT in 1966, ELIZA has become the world's most celebrated artificial intelligence demonstration program. ELIZA is a non-directive psychotherapist who analyzes each statement as you type it in and then responds with her own comment or question—and her remarks are often amazingly appropriate!

Designed to run on a large mainframe, ELIZA has never before been available to personal computer users except in greatly stripped down versions lacking the sophistication which made the original program so fascinating.

Now, our new Commodore 64 version possessing the FULL power and range of expression of the original is being offered at the introductory price of only \$25. And if you want to find out how she does it (or teach her to do more) we will include the complete SOURCE PROGRAM for only \$20 additional.

Order your copy of ELIZA today and you'll never again wonder how to respond when you hear someone say, "Okay, let's see what this computer of yours can actually do!"

READ WHAT THE EXPERTS SAY ABOUT OUR VERSION OF ELIZA: "Much more than a mere game... You'll be impressed with ELIZA... A convincing demonstration of Artificial Intelligence."

—PC MAGAZINE

"Delightful entertainment... An ideal medium for showing off your system."

—MICROCOMPUTING MAGAZINE

"ELIZA is an astounding piece of software... A fascinating program to use and study."

—BARON'S MICROCOMPUTER REPORTS

"ELIZA is a great way to introduce your friends to computers... A very funny party game."

—PETER A. McWILLIAMS

"ELIZA is an exceptional program, one that's fun to use, shows off your machine, and has great historical interest"

—POPULAR COMPUTING MAGAZINE

"This version of ELIZA is the best we have seen. As a party game, it is unmatched."

—HOME APPLICATIONS FOR THE C-64

ELIZA IS AVAILABLE IN THE FOLLOWING FORMATS:

(Please specify Disk or Cassette)

1. Protected Version \$25
(Protected Version can be run but not listed or modified)

2. Un-protected Commodore 64 BASIC Source Version \$45
(Source Version can be listed and modified as well as run)

Both versions include a six page user manual.

Please add \$2.00 shipping and handling to all orders

(California residents please add 6 1/2% sales tax)

SHOPPING MANAGER
A Grocery Shopping System

SHOPPING MANAGER: Displays all the items in your supermarket to you, an aisle at a time, starting at the store entrance and finishing at the checkout line. Function keys allow you to note coupon or sale items or add personal comments to any item. The printed shopping list is arranged in the same order that you will be walking through the store. No more forgotten items or backtracking.

MARKET MAPPER: Painlessly converts the SAMPLE datafile into an accurate map of YOUR supermarket. Nine datafile editing options include: printer dump; make a new file; edit existing; rearrange and merge aisles of an old file to create a new file; transfer and copy datafiles with disk or tape or both. Function keys make editing easy.

SAMPLE: a complete 1300 item supermarket datafile, which can be used "as is" or easily converted into an accurate map of your own store.

The system pays for itself through savings in time, money and gasoline wasted on "extra" trips to the store. You will shop less often and in less time. The system is very User Friendly with prompts and menus throughout.

For the C-64 or VIC-20 (w/16K expn) with Disk or Tape and Printer. The complete System for \$31.45

ALSO AVAILABLE: COLOR DEVICE—Plugs into the 5 pin video port on the C-64 and enhances the sharpness of your color TV. \$8.95 (Make sure your C-64 has a 5 pin port and not 8 pin).

Specify C-64 or VIC-20, Tape or Disk and send check or money order to:

Chateau d'Orleans

The designers at FALCON GAMES have worked to do what other software designers considered impossible: to create a mystery that is not a mere process of elimination, but a mystery with the diversity and detail of more than one hundred novels.

Our designers know the importance of realism. Real investigators don't mark suspects off of a list until only one is left; the truly proficient sleuth finds subtle clues, which would be overlooked by a novice. They are the clues that point the finger of justice toward the guilty. Just as in real life-experience is the key to success.

The setting is as important in a great software mystery as it is in a great novel. FALCON has chosen a magnificent chateau in the South of France. The entire grounds and four totally accessible floors with dozens of rooms require a thorough investigation. This is a real mystery for a real detective.

Chateau d'Orleans uses the exclusive interactive disk-text system for the Commodore 64 from FALCON. Send twenty-four dollars, postage paid, for a copy of the game and a detective's handbook to:

CARDCO "NOW" SOFTWARE

... available now for your Commodore-64™ and more!

A fine line of software developed by CARDCO for your Commodore-64 computer with all the features you should expect in much more costly software. CARDCO's "NOW" Series provides many unique and exclusive features and are packaged for easy reference, simple storage, instant recognition.

"WRITE NOW" ... WORD PROCESSOR SOFTWARE ... An excellent time saver, CARDCO offers the "Write Now" C/02 word processor program with built-in 80 column display. You see exactly what will print. All special codes can be transmitted to printers maintaining justification. Easy full-screen editing; works with any printer.

"MAIL NOW" ... MAILING LIST SOFTWARE ... CARDCO's D/01 "Mail Now" quickly (in memory) sorts by zip, category, name and state; fully compatible with "Write Now". Other fine features include; user-oriented; menu-driven operation; each disk supports 600 entries. Format can print single, double or triple labels across.

"SPELL NOW" ... Cardware D/04 ... a fine program designed as a spell checker for use with "Write Now" on the Commodore-64. A 34,000 word dictionary with two additional user constructed dictionaries. Menu-driven operation for ease of use. And "Spell Now" allows you to see each misspelled word in the context of your document for correction.

"FILE NOW" ... D/05 ... is a totally integrated, menu-driven database software package which interfaces with both the "Write Now!" for the 64 and the "Spell Now." 40K of working storage space is available with "File Now". "File Now"

appears on the screen as index cards for easier manipulation of your data base; you see 5 index cards at a time. Cards are user defineable, i.e., user determines what goes where on the "index cards" and can sort by any given field. Every card has a general topic field which allows for quick sorting through cards.

"GRAPH NOW" INCLUDING ... "PAINT NOW" ... D/06 ... This disk-based graphic/logo generator is totally menu-driven. Allows for the development of pies, charts, bar graphs and other vivid graphic illustrations. Also has the ability to design, and print logos and high resolution pictures. "Commodore-ready"; Interfaces with CARDCO'S "Write Now" Word Processor, "Mail Now", "Spell Now" and "File Now".

Write for illustrated literature and prices or see CARDCO Computer Accessories and Software wherever Computers are sold.

LOOK WHAT'S ON TELEVISION TONIGHT.

6:00

THE HULK

The first comic attraction in the QUESTPROBE™ Adventure Series. You become a super hero. A joint (ad)venture of Scott Adams, Inc. and Marvel Comics Group. (Diskette)

7:30

SOLAR FOX

It's erase or be erased as you navigate spaceship over a grid of colorful pulsating entities, armed with laser. Unlimited levels. A BALLY MIDWAY original. (Cartridge)

9:00

MAGIC DESK I

The scene opens on an office desk, complete with digital clock, typewriter, wastebasket and file cabinet. Select functions (typing, filing, editing) by pointing animated finger. (Cartridge)

6:30

MATH FACTS

(Ages 5 to 10) (Micro School) Educational TV. Practice in basic math facts. Several levels. (Easy to hard) (Diskette)

8:00

EASY SCRIPT

Our best wordprocessor. Displays 764 lines by 40 characters. Prints over 130 columns. Global/local search/replace/hunt/find. Super/subscripts. Insert/delete characters, lines, sentences, paragraphs. (Diskette)

9:30

INTERNATIONAL SOCCER

(Gold Medallion Game) Sports highlight. With passing, kicking, diving, goals, even trophies! Great color, 3-D realism. No locker room interviews. (Cartridge)

7:00

FRENZY/FLIP FLOP

(Ages 6 to 14) (Milliken Edulun) FRENZY (subtraction and division) The hungry gator arrives... save the fish... play the BONUS game... FLIP FLOP (transformed geometry) look at the two figures... do they need to flip, turn or slide? (Diskette)

8:30

THE MANAGER

A powerful database management system. For business, educational or personal files. Not for Rockford's files. With four built-in applications. Or design your own. (Diskette)

10:00

SIMONS' BASIC

Rated PG. Expands Commodore BASIC by an additional 114 commands. Convenient programming commands such as RE-NUMBER and TRACE plus graphics plotting command. (Cartridge)

Announcing the most exciting variety show on television.

Featuring many of the stars of arcade games, education and the business world.

Produced by (and for) Commodore, the people who bring you the Commodore 64™ a 64K computer that would be a value at three times its price. In fact, many of its competitors are three times its price.

Produced in living high resolution graphics with 16 available colors and with eight 3-dimensional sprites.

With a real high fidelity sound that covers a 9-octave range.

And a supporting cast of low-price, high capacity disk drives, printers, monitors (a better way to watch Commodore 64) and modems.

So, if you're not pleased with what's on your tv set tonight, simply turn on your Commodore 64.

COMMODORE 64
IT'S NOT HOW LITTLE IT COSTS,
IT'S HOW MUCH YOU GET.
