BATTERIES INCLUDED

"The Energized Software Company!"

We started with Commodore, designing programs that quickly became industry success stories. Now we're moving on, applying our expertise to other systems. Look for Apple, Atari, IBM, and Commodore software with the Batteries Included label!

"The best Atari word-processor ever."
ANTIC MAGAZINE

"...capable of very large and complicated searches ... a very good system."
TPUG MAGAZINE

"Performance: excellent ...
Error-Handling: excellent ...
Value: excellent"
FAMILY COMPUTING
(a "Billboard" magazine
#1 best seller)

Look forward to excellence, in every respect. Power and performance, ease of use, incredibly low prices, for programs that help you in so many ways.

"quite simply the best ... the highest rating possible."
ANALOG COMPUTING

Also from BATTERIES INCLUDED:

Calkit: problem-solving spreadsheet program with built-in templates for the most-needed home and business applications — including income tax, budgets and many more.

B/Graph: professional-quality graphics/charting and statistical analysis package turns your data into superb visuals.

Sales Force: professional sales management and reporting program saves you valuable hours.

"Keys To Typing": easy to follow tutorial program typing teacher.

"Literature Challenge — Introduction To Shakespeare": learn about the bard's three most-taught plays — and have fun! (Other authors on the way.)

B.I.-80 Column Display: add-on module doubles your screen capacity and improves visibility.

HOME ORGANIZER SERIES home database managers. (8 programs including Home Inventory, Recipes, CheckBook, Address Book, Audio/Video Catalogue and more)

Master Of The Lamps:
A Unique Adventure In Home Computer Software.

The King Is Dead. You're Next In Line.

But wait. Before you put on the jeweled turban and lift the royal sabre, there are a few "formalities" you must go through. Sometimes... "deadly" formalities.

When the king dies, three lamps are shattered, the pieces scattered to the wind and three evil genies escape. Now your journey to the throne begins, the perils await. As prince you must retrieve each piece of each lamp and capture each genie.

Fly with the wind on your carpet of magic. Enter, if you dare and if you can, the incredible world of each genie. Hold on to your carpet as you swoop, dive, bank and careen

through always-moving diamond-shaped gates. Gates that guard each genie's domain. Calculate. Plan. Consider. Quickly. Quickly. Your heart is racing. Your mind must race ahead.

Each genie will challenge you with his ancient, mystical trials.

Concentrate. Listen to the tones. Watch the colors. Remember. Hone to their sharpest, your mental and physical reflexes. Each trial is harder. And the time to respond gets shorter.

The throne awaits, but not forever. The gong is struck, it tolls...

Introducing the Most Powerful Business Software Ever!

FOR YOUR IBM • APPLE • MAC • TRS-80 • KAYPRO • COMMODORE • MSDOS OR CP/M COMPUTER*

50% OFF!

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSARECEIVABLES™ \$99.95

VERSARECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

VERSAPAYABLES™ \$99.95

VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSAPAYROLL™ \$99.95

VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

VERSAINVENTORY™ \$99.95

VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSALEDGER II™ \$149.95

VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software.**

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II™ manual will help you become quickly familiar with VERSALEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

FOR COMMODORE OWNERS ONLY!

Commodore owners *only* may now take 50% off our listed price of any module(s) from our VersaBusiness Series. All sales are final (our normal 30-day money back guarantee does not apply to sale items).

White Lightning

The Games Designer used
by the Professionals
Commodore 64™

Now, without any knowledge of machine code, you can write fast, smooth, professional, totally original games and market them without paying royalties.

Even if you have already mastered machine code, we believe that the time and problems saved by writing in White Lightning's FORTH-based high level language could revolutionize commercial games writing for years to come.

IDEAL IDEAL is an Interrupt Driven Extendible Animation sub-Language. Once you have mastered IDEAL's easy to learn set of over 100 commands and just a little FORTH, you will be ready to produce arcade-quality games even if you don't know machine code. Up to 255 software sprites, each with its own user-defined dimensions, can be moved around the screen (or memory), scrolled, spun, reflected, enlarged or inverted with amazing speed and smoothness. Operations are possible between screen windows, sprites and

sprite windows. Software sprites can even stretch across several screens, so those difficult scrolling landscapes that form the basis of so many games are easy to achieve. White Lightning also adds PLOT, DRAW, POLY and CIRCLE as well as fully supporting the Commodore's own excellent hardware sprites and sound facilities. The IDEAL routines operate in hi-res or 4-color modes.

MULTI-TASKING Because White Lightning uses interrupts, you can effectively run two programs at once. This means, of course, that games like Space Invaders and Defender can be written without complex timing calculations. So while one program smoothly scrolls the landscape, the second animates the other characters. This is undoubtedly one of White Lightning's most powerful features.

MARKETING AND PORTABILITY Although White Lightning uses an integer FORTH as its host language, programs can be written in a combination of Commodore BASIC, FORTH,

IDEAL and machine language. The final program will run independently of White Lightning and absolutely no marketing restrictions are imposed.

BASIC LIGHTNING In addition to the White Lightning program itself, the package also includes an extended BASIC. This BASIC adds more than 200 reserved words including all the IDEAL commands, procedures and a full set of structured programming commands. Up to five tasks can be run simultaneously. BASIC Lightning is also available separately.

SPRITE DESIGN White Lightning comes complete with a separate sprite designing program. Two libraries of sprites are included and up to 255 sprites can be designed with loading and saving facilities between sessions.

The package comes complete with two 100-page manuals and a free demonstration program is included to show off the potential of the system.

If your local dealer doesn't stock White Lightning, just send off this order form for our rapid despatch service. All checks in \$US please.

RUNNING RUMINATIONS

Rally Round CES!

The personal computer market desperately needs a shot in the arm. Will June's Consumer Electronics Show in Chicago provide the prescription for an ailing industry?

CES has traditionally been *the* occasion for manufacturers to showcase their latest computer products. It comes at a particularly critical time this year for the industry in general and for Commodore in particular.

Commodore has recently taken a sound thrashing in the press. It appears that industry analysts are anxious to erect a premature gravestone for the company that revolutionized home computing.

At a time characterized by a declining interest in computers, sagging sales and a general malaise in the industry, CES is an opportunity for Commodore to spark new interest in its products and generate some excitement with innovative applications. Commodore must disprove the pundits' assessment that the company came out of the blocks too fast, spent its vitality and now lacks the stamina to go the distance.

Before gleefully predicting the demise of Commodore, the analysts and doomsayers should take a closer look at Commodore's latest offerings, the C-128 and the Amiga. After all, to the majority of people, that's how the company is known and judged—by its products that are available.

While the Amiga is still under wraps (the public unveiling is slated for mid-July), the *RUN* staff has been putting the C-128 through its paces since early April. The general consensus is, "The C-128 has the potential to be a big seller." According to our tests, the new machine can lay claim to 100 percent C-64 software compatibility. The special help keys, the help commands and the enhanced Basic 7.0 are a programmer's delight. The C-128 features the capability to run CP/M software; a versatile, faster disk drive; and an improved monitor. These features, together with a low Commodore price, make the C-128 a winner.

Only someone with antifreeze in his veins would fail to be moved by the prospects of this machine. It is definitely an improvement over Commodore's C-64, the best-selling microcomputer to date. Apple has nothing like it. Neither has IBM nor Atari.

As the release date for the machine—together with its new monitor and disk drive—approaches, and as developers begin to introduce C-128 software, I expect to see

a great deal of excitement generated about the new machine at CES.

Commodore predicts sales of a million units by the end of fiscal 1986. This may be a little optimistic, but Commodore definitely has the product; now it's up to marketing.

Surely, Commodore cannot be charged with lacking innovation in its product-marketing scheme. Just five short years ago, the VIC-20 (with only 5K, remember?) was introduced for \$300. Today, for the same price, you can get a machine (the C-128) with 75 times the capability and 100 times the potential. Not bad.

Next month I'll report on my impressions of the CES show, together with reactions and comments from developers and show-goers. db

Reader Cooperation

RUN is the only Commodore-specific publication that includes the names and complete addresses of its authors with each article published. We provide this information as a service for readers who want to contact the authors to request further information or comment upon the articles. (Fan letters are welcomed.)

We feel that both readers and authors benefit as a result of this exchange. Reader feedback can be very gratifying, but it has come to our attention that many readers are taking advantage of this service offered by *RUN* and its authors.

If you expect a response to a query, please include a self-addressed, stamped envelope. If you're responding to an author's offer to provide a copy of his published program, be sure to include a cassette or disk and a mailer with the proper postage, as well as the requested fee to cover the copying costs.

RUN magazine boasts a very active readership, so a published article will generate hundreds of responses. Most authors are not equipped to handle such a volume. To make their lives a little easier, please follow the directions contained in the article.

Also, since some of our authors have several articles in print, specify what article you're talking about. If you're having problems with a particular program, include enough details to help the author isolate the problem.

RUN's authors are more than willing to help their fellow computerists get the most out of their Commodores, but your cooperation would greatly help them to help you. I know that you'll appreciate the same courtesy when you've published your first article in *RUN*.

BELIEVE IT OR NOT!

- A neutrino has neither mass nor a charge, but travels at the speed of light!
- A 1950 study predicted all computing in the U.S. through 1999 could be done by 5000 computers!
- An integrated program with the power of Lotus 1-2-3 is available on the C64!

Until now, while useful programs existed for the C64, you had to use different commands for each. Even worse, they couldn't share data. Now there is one integrated program with the power of Lotus 1-2-3: **VIZASTAR**. It has a spreadsheet, a database and graphics. It took Kelvin Lacy, who wrote the acclaimed "Omniwriter" for Hesware, 15 months to develop Vizastar. It is totally menu-driven and written 100% in 6502 machine code. You can go instantly from spreadsheet to database or graphics and data is shared by all. It is compatible with virtually all word processors and printers. All Vizastar commands can be automated, so you can create your own applications and run them with one keystroke. Bet you think, with integration must come compromises. Nope. Read on and decide for yourself.

Actual Screen Dump Printed by VIZASTAR

The VIZASTAR Spreadsheet

It is a full-featured spreadsheet, as powerful as Multiplan. But much faster — faster than many on the IBM-PC! Remarkably, 10K of memory is available for spreadsheet use. Below VIZASTAR is compared against the other leading spreadsheets.

	CALC RESULT	MULTI- PLAN	VIZA STAR
No. of Rows	254	255	1000
No. of Columns	63	63	64
Vary Indiv. Columns	NO	YES	YES
Date Calculations	NO	NO	YES
No. of Windows	2	8	9
Built-in Functions	21	39	33
Link Spreadsheets	NO	YES	NO
Sort	NO	YES	YES
Program Mode	NO	NO	YES
Money-back Guarantee	NO	NO	YES
Retail Price	99.95	99.95	119.97

The VIZASTAR Database

It is a fast, random-access database, with file size limited only by available disk space. Create file layouts by simply painting a picture of the layout on up to 9 screens, showing where each field starts and ends. Vizastar does the rest. You can modify the layout at any time. To process the data, you use the familiar environment of the spreadsheet.

The VIZASTAR Graphics

Open a window anywhere and display a high-resolution bar or line graph of spreadsheet or database data. Or display the data as a pie chart or spectacular, 3-D multibar graph.

"I have been using Vizastar daily. I find it is the most powerful spreadsheet on the market for the C64 and the only spreadsheet that I will personally recommend for serious use."

Richard Tsukiji, President,
U.S. Commodore Users Group

"The power and design of Vizastar is spectacular. One of the "Best 5" software for the C64 of the 1000s I've seen."

Mike Hayes, Commodore Dealer

[Vizastar is] a phenomenal piece of programming which could turn the home computer market on its head."

California Magazine 2/85

RISK-FREE OFFER

VIZASTAR comes with a cartridge, a 1541 diskette with a backup, reference and tutorial manuals. The 50 page tutorial manual is full of examples and pictures, to guide you step-by-step. Vizastar is priced at **ONLY \$119.97**. The power of Vizastar may be hard to believe, but its value is hard to beat. We are so positive you will be delighted with it that we offer a hard-to-believe 15 day Money-Back Guarantee. Try it Risk-Free. Call us today or send a check or Money Order. VISA/MC accepted.

C-64 screen into two different-colored sections. Lines 1-3 will detect typing errors in your Data statements; you should delete them when the program asks you to, then save the remaining lines as your master routine. It will be compatible with most Basic programs, especially the ones not involving machine language.

Delete lines 1-3 and run your program. Anytime after doing this, you can split the screen by executing SYS 40800. The split will remain until stop/restore cancels it; it can be recalled by repeating the SYS 40800.

You can change the top color by changing the sixth item (002) in line 21, or, after running the program, by entering POKE 40877,c (where c is the number for the color you want). You can change the bottom color by changing the eighth item (007) in line 18 or by POKE 40855,c. The screen split can be after any line, and its location is controlled by the fifth item in line 13 (010=split occurs after tenth line). To change the split location on an already-split screen, enter POKE 40812,n:SYS40800 (where n is the number of lines to appear above the split).

To purchase by mail, send check or money order to Electronic Arts, P.O. Box 306, Half Moon Bay, CA 94019. Add \$3 for insured shipping & handling. Indicate machine version desired. Allow 1-4 weeks for delivery. Apple II family available now at \$39.95. C-64 available now at \$34.95. For a copy of our complete catalogue and direct order form, send 50¢ and a stamped, self-addressed envelope to Electronic Arts, 2755 Campus Drive, San Mateo, CA 94403.

sory perception. You tell your friends that your computer "knows" you and will not cooperate with anyone else. Then you load ESP, type RUN and press the return key. The program runs fine. (It also disables List, to protect our little joke.)

The fun starts when you ask someone to run the program. Your friend types RUN and presses the return key, but the computer refuses to obey and instead disables the keyboard! You miraculously enable it again and run the program effortlessly; anyone else who tries it will fail. The computer appears to respond only to your mystical presence.

Here's how it works. After typing RUN, you hold your finger on the return key a little longer than normal (line 30 checks for this). When your friends fail to do this, lines 80-110 cause an apparent crash. To enable the keyboard, you discreetly press the back-arrow key, which gets you out of the loop.

If your friends suspect your slow action with the return key, mislead them by pressing it normally and immediately holding down the N key. This is easy, because you just had your finger on it from typing the word RUN. When they have been mystified long enough, you press the back-arrow key while the program is running, and List is re-enabled.

This ESP trick is easy to perform, and, with a little practice and showmanship, you can baffle even the most knowledgeable computerists.

```
10 REM ESP - DON THORPE

Don Thorpe
Glenunga, South Australia

\$214 Ghostfreezers—In Activision's Ghostbusters game, one screen requires you to maneuver a ghost into a trap using laser beams. A simpler way is to align your men so they totally overlap one another, appearing to be only one man. When the ghost flies over you, press the fire-button, and the ghost will stop. Press it again and he's history.

Maurice Arkinstall
Houston, British Columbia

\$215 Doodle and Print Shop combined—

If you own these excellent programs, you might like to put some Print Shop lettering on the screen, then decorate the display with Doodle's superior drawing options. If you have a machine language monitor, you can do it with

ease. Let's say you wrote something with Print Shop and saved it as TEXT. Just enter your monitor and do this:

```
.L "TEXT",08 (load from monitor)
.T 4000 5F3F 6000 (transfer Print Shop screen to Doodle area)
.F 5C00 5FE7 01 (add color: black)
.S "DDTEXT",08,5C00,7F3F (save, adding "DD")
```

Then, from Doodle, load TEXT and doodle to your heart's content. Of course, you can substitute any name for TEXT, as long as you add the DD when saving it as a Doodle file.

Erik Francois
Vienne, France

\$216 Wolfenzauberei—When your Beyond Castle Wolfenstein man is killed, the computer asks you to press the space bar to restart the game. If you remove the disk before pressing the space bar, what follows is sheer magic (in German, *Zauber*); the game will restart in the position right before you died or got caught. After restarting, reinsert the disk and resume where you left off.

Darius Hatami
Mystic Islands, NJ

\$217 Star Wars trickery—If you own Star Wars the Arcade Game for the C-64, and would like a fast way to the death star, try this: Start the game and press the restore key and the space bar simultaneously. This should stop most of the fighters in their tracks and cause the rest to move in a straight line. Repeat the procedure, and all fighters should stop. Now, with the enemy disabled, kill his forces off and you should appear at the trench.

Jared Groth
Detroit, MI

\$218 Datassette audio—If your video monitor has sound capability, you can use it to listen to your Datassette tapes. Such listening is most informative and often helps diagnose difficulties with the tape system. To do the magic, enter POKE 54296,15 then turn your volume up to max. When you load, save or verify, you should hear the tape loud and clear.

Dan Kennedy
Gearhart, OR

\$219 Dead Datassette—If your Datassette suddenly stops operating, but everything else works fine, the chances are good that part of your power supply has blown. The power supply provides both 5 volts dc and 9 volts ac, with the latter used for the tape deck. You can use a Radio Shack #273-1515 transformer, 18 volts center-tapped, to bypass a defective 9-volt supply. Unless you're qualified in electronics, you should get a knowledgeable friend to help you.

Strip the round power supply cord and identify the red and blue wires, plus two black ones. Cut the black wires and connect them to the 9-volt ac from your new transformer, and you should be back in business. If you

Fleet System 2.TM

Word processing that *spells* V-A-L-U-E.

Complete word processing with built-in 70,000 word spell checking - Only \$79.95

Up till now, you'd have to spend a minimum of about \$70 to get a good word processor for your Commodore 64TM. And if you added a small, *separate* spell checking program, you'd be out well over \$100!

Now there's Fleet System 2! It's two powerful programs in one, and it's perfect for book reports, term papers or full office use.

Fleet System 2 combines the EASIEST and most POWERFUL word processor available with a lightning-fast 70,000 word spelling dictionary — all in one refreshingly EASY TO USE integrated system. Finally, spell checking is now available at your fingertips.

You can even add over 15,000 "custom" words to the built-in 70,000 word dictionary. And at a suggested retail price of \$79.95, Fleet System 2 really spells V-A-L-U-E, and 70,000 other words too!

Fleet System 2 helps people of all ages to learn to *spell correctly* and *write better* too. It's the ONLY full featured word processor that provides you with helpful writing and vocabulary feedback such as: the total number of words in your document, the number of times each word appears, and total number of "unique" words, just to name a few.

Fleet System 2 has every important feature that will help you make child's play

out of the most heavy duty typing tasks. There's Built-in 80 Column Display — so what you see is what you get, Horizontal Scrolling During Typing, Easy Correction and Movement of Text, Page Numbering, Centering, Indenting, Headers and Footers, Math Functions, Search and Replace, Mail Merge, BUILT IN 70,000 word SPELL CHECKING and much, much more!

Ask for Fleet System 2.
Exceptionally Easy. Packed
with Power. Perfectly
Priced.

Power 64

A

A Utility to Help Strengthen and Increase Your Programming Power

Commodore Basic as implemented on the C-64 is an adequate programming language. Even the improvements made for the Plus/4's Basic 3.5 leave a lot to be desired for the serious Basic programmer.

Commodore 64 owners can remedy many of these limitations with a package called Power 64, a programming utility from Pro-Line Software. It is written by superstar programmer Brad Templeton, and the documentation was composed by Jim Butterfield, whose light and matter-of-fact style makes it fun to learn almost anything.

Power 64 does use up some of the C-64's available memory, and although this has never caused me any problems, you should keep it in mind when developing lengthy programs.

The features of Power 64 have been broken into two sections. The More Power program contains additional functions not available in the main program; it can be loaded whenever you wish.

What can you do with this program? Here are some of Power 64's features: automatic line-numbering, an option to delete a specific range of lines, a command to dump active Basic variables, a Renumber command, a trace feature for program debugging, and a Why command that helps you locate the specific cause of a program error.

These options are just the beginning. You can search for certain patterns (lines containing NQ\$, for example), and perform a search-and-replace, which is very helpful when you discover that you've used the same variable for two different quantities.

One of the features I often use is the Test option. This allows you to try out a subroutine before you actually put it into a program. Power 64 also allows you to scroll forward and backward through a program listing—no more having to jump from one segment of a program to another.

You can program instant keywords, which saves the time it takes to type in commands and strings each time

you use them. Many of the more common commands are programmed for you, but you can redefine them as you wish.

True program merging is not only possible with Power 64, but it becomes so simple that you will wonder how you ever lived without it.

Several additional features of Power 64 go beyond the scope of this quick overview. The program's author has even left hooks in the program so that additional commands can be added at a later date.

What is missing from Power 64 are graphics and sound commands. Other Basic extenders, such as Simons' Basic, do offer these commands. For pure programming ability, however, they do not necessarily provide the ease and versatility of Power 64.

If you do a lot of programming, you will find that Power 64 restores the enjoyment of programming that might have been lost as your home projects became more complicated. I wouldn't be without it! (*Pro-Line Software, 755 The Queensway East, Unit 8, Mississauga, Ontario, Canada L4Y 4C5. C-64/\$49.95 disk.*)

Jim Grubbs
Springfield, IL

Report Card

A

Superb!

An exceptional program that outshines all others.

B

Very Good.

One of the better programs available in its category. A worthy addition to your software library.

C

Good.

Lives up to its billing. No hassles, headaches or disappointments here.

D

Mediocre.

There are some problems with this program. There are better on the market.

E

Poor.

Substandard, with many problems. Should be deepsixed!

Flight Simulator II

Put yourself in the pilot's seat of a Piper 181 Cherokee Archer for an awe-inspiring flight over realistic scenery from New York to Los Angeles. High speed color-filled 3D graphics will give you a beautiful panoramic view as you practice takeoffs, landings, and aerobatics. Complete documentation will get you airborne quickly even if you've never flown before. When you think you're ready, you can play the World War I Ace aerial battle game. Flight Simulator II features include ■ animated color 3D graphics ■ day, dusk, and night flying modes ■ over 80 airports in four scenery areas: New York, Chicago, Los Angeles, Seattle, with additional scenery areas available ■ user-variable weather, from clear blue skies to grey cloudy conditions ■ complete flight instrumentation ■ VOR, ILS, ADF, and DME radio equipped ■ navigation facilities and course plotting ■ World War I Ace aerial battle game ■ complete information manual and flight handbook.

Which game? (8-9)5
You're making your way north, on Baker
street. A dark alley extends to the
east.

You can't go in that direction!
:S
You dead-end in the alley. A fat man
lies in a corner, fast asleep.

game, other than those you might decipher from the game description and screen shots on the back of the box. That's as it should be, for too many clues would spoil the fun.

To escape from the island, you must solve logical puzzles. And you must find your way out of other areas of the game until you reach your final destination and discover your true identity. There is a certain amount of realism here, as you can solve the puzzles by doing what a desperate person would do under the same circumstances.

The quality of the graphics is excellent, aside from the one or two times that the color of an important object blended so much into the background that, were it not for the accompanying text, I might never have seen it.

More than 80 screens make up the game, each displayed through the eyes of your character. Some of the screens are animated, and I found that I awaited each with great anticipation.

You may call on the buzzard for help a maximum of three times during the game. After that, instead of the usual cryptic clue, you'll be told to think for yourself.

On the flip side of the disk is an introduction to text adventures, and instructions on how to word your commands and use logic. There is also an introduction to Condor, the buzzard.

Should you find yourself in a real bind, Activision will (for \$1 to cover postage and handling) send you a book of clues. Or, if you keep walking into that hotel room only to be shot by the man in the bed, and if the mail is too slow, and if you can't stand the mystery for another minute, you may call the Mindshadow hotline.

Mindshadow represents a giant step for Activision. The former video-game people are continuing to offer innovative software for the home computer market. I recommend Mindshadow. It's definitely worth your time and your money. (Activision, Inc., 2350 Bayshore Frontage Road, Mountain View, CA 94043. C-64/\$29.95 disk.)

text and graphics adventure game from Activision.

You begin on a desert island, a victim of amnesia and abandonment. Unlike the Zork class of game, your purpose is not to explore, but rather

to escape. Since you accumulate no points, the only way for you to tell a bad move from a worthwhile move is to notice whether or not it results in your death.

There are virtually no clues to the

AMAZING DAISY

NOW! FULL SIZE, FULL FEATURE, LETTER QUALITY AT ONLY \$353

If you have been searching for a letter quality printer you probably found that the flood of claims and counterclaims were a real roadblock in your search. Not long ago we were in the same position. We tried to determine which daisy wheel printer had all the features anyone could want, but would also appeal to the cost conscious buyer. Recently several manufacturers introduced printers that had features we were seeking. After a thorough assessment we eliminated all but one which precisely met our qualifications.

THE RESULTS ARE IN

We found the printer which has all the features anyone could want. We've named it the Arotek Daisy 1120, a real heavy-duty workhorse printing at 20 characters per second. The manufacturer is Olympic Co. Ltd., a highly respected Japanese firm.

FEATURES GALORE

This printer has it all. To start with, it has a front control panel with indicators for Pitch Selection which allows for 10, 12, or 15 characters per inch (CPI) or Proportional Spacing. There is a Select (Online) button (with indicator) and a Line Feed button. You can also set Top-of-Form or Form Feed with the touch of the TOF button. Other front panel indicators include Power and Alarm.

To load a sheet of paper, simply place it in the feed slot and pull the paper bail lever. The paper feeds automatically to a 1 inch top margin and the carriage aligns to the selected left margin. In this manner, each page can have identical margins.

You can continue to use your Commodore while the Daisy 1120 is printing.

The built in 2K buffer allows a page or two of concurrent printing and use of your computer for the next job. To really take advantage of your printer's optional features, the automatic Cut Sheet Feeder eliminates tiresome paper handling. Also available is the adjustable Tractor Feed option. *Compare our option prices!*

Best of all the Daisy 1120 is quiet: only 57 dB-A (compare with an average of 62-65 dB-A for others).

COMPLETE COMPATIBILITY

The Daisy 1120 uses industry standard Diablo® compatible printwheels. Scores of typeface styles are available at most computer or stationary stores. You can pop in a 10, 12, 15 pitch or proportional printwheel and use paper as wide as 14". At 15 CPI you can print 165 columns—a must for spreadsheet programs.

The Daisy 1120 uses the Diablo Hytype II® standard ribbon cartridges. Again universally available.

Not only is the hardware completely compatible, the control codes recognized by the Daisy 1120 are Diablo 630® compatible (industry standard). You can take advantage of all the great features of word processing packages and automatically use superscripts, subscripts, automatic underlining, bold-face (shadow printing) and doublestrike.

The printer has a set of rear switches which allow the use of standard ASCII as well as foreign character printwheels. Page length can be set to 8, 11, 12, or 15". The Daisy 1120 can also be switched to add automatic line feed if required.

THE BEST PART

When pricing a daisy wheel printer with all these features (if you could find one), you would expect to pay \$600 or \$700 dollars. The options would add much more, but our exhaustive research has paid off for you the Commodore user. We can now offer this printer for only \$353. Order yours today!

NO RISK OFFER

Try the Daisy 1120 for 2 weeks. If you are not satisfied for ANY reason we will refund the full price—promptly. A full 1-year parts and labor warranty is included. Another indication of quality and reliability.

THE BOTTOM LINE

Arotek Daisy 1120 (Order#1120) \$353 w/standard Centronics parallel interface and 2K buffer.

Options

Auto Cut Sheet Feeder (#1110) \$188

Tractor Feed (#1112) \$77

KARTRIDGE KRACKER

NOW you can own this unique and powerful tool which will allow you to dump the contents of 8K and 16K cartridges onto disk! But what's really great is that you can also RUN the cartridges programs without plugging in the cartridge! The KRACKER gets YOU INSIDE the cartridge! Put all your favorites on disk and get rid of the clutter. This package provides you with the software and hardware needed to get started. Program on disk included. (Some cartridges require use of external RAM not included)

\$44.95

SOFTWARE PROTECTION HANDBOOK

3rd Edition

THIRD EDITION! NOW AVAILABLE!

If you're tired of being harassed by protected software and too many copy programs, then this is the book for you! This 224 page manual covers the gambit from legalities to protection methods to step-by-step back up procedures. Now you can learn both how to protect and unprotect software! The techniques covered include copying cartridges to tape or disk, tape protection, and disk protection. Disk protection covers error no.'s 20, 21, 22, 23, 27 and 29 plus single track formatting, header modification, header swapping, half track reading and writing, reading and writing modified bit densities, formatting illegal tracks/sectors, sync writing and more! The Third edition explains, tells how to detect and how to write them with included software. Eleven useful utilities and many protection listings! Our disk analysis programs reveal the protection methods used on your originals. A diskette with all software is available for a minimum extra charge. This may not be the only book you should have for the C-64, but it is certainly the one book you should not be without!

APOLLO COPIES IT ALL

APOLLO Does it All. This program is the latest generation of copy programs. It will do everything the \$39.00 and \$49.00 programs will do and **more**. It Copies **ALL** drive errors, bad tracks and sectors, non-standard format, bad syncs, and half tracks. We feel this is the best program of its kind available...

\$29.95

MSD Sure Copy

At last a complete utility package for the MSD Dual Drive. This is the first MSD utility program that does it all. The main menu options include:

- Copy Protected Disk
- Copy Files
- Format a Disk
- Change Disk Name
- Quit
- Copy Unprotected Disk
- Scratch a File
- Rename a File
- View Directory

\$39.95

Sure Copy will put all errors automatically on disk: 20, 21, 22, 23, 27 and 29's.

D-CODER

- Translates any machine language program into easy-to-read English descriptions with complete explanations of each command!
- Makes complete notations of all important memory locations accessed by the program! (SID, VIC, MOS, KERNAL, etc.)
- Gives you three ways of accessing programs:
 - 1) Will read and list programs from DISK
 - 2) Will read and list programs from MEMORY!
 - 3) Direct user input (from magazines, etc.)
- Can be used to locate and examine any machine language program's protection routines!
- Can be used to easily break apart machine language programs for study and examination!
- Printer option for complete hard copy listings!

You no longer need to be an EGGHEAD to read Machine Language.

\$19.95

N-CODER

\$19.95

the machine language manipulator...

The perfect companion program to D-CODER!

Allows you to easily make changes in machine language programs... right on the disk!

- Rewrite ability allows code to be altered and then rewritten directly to the disk!
- Features sector-by-sector scrolling assembly language display of machine language programs!
- Notation of ASCII text equivalents for easy spotting of embedded text strings!
- Handy reference display of all assembly language commands and their ML numerical equivalents!
- Byte splitter for easy splitting of decimal addresses into low byte-high byte format!

Super Loader

Super Loader is a Kartridge that plugs into your expansion port, that allows the computer, on power up start the disk drive and load the first preselected program on the disk.

- Change colors
- Load wedge
- Works with more drive
- Takes up no memory
- Reset switch included

Only **\$29.95**

TOOL BOX

This Disk has over 100 routines, some of them are routines for protection, smooth scrolling, modem routines, and sound and color

routines. They can easily be incorporated into all of your programs. It is also fully documented.

\$19.95

If the space program had advanced as fast as the computer industry, this might be the view from your office.

And space stations, Martian colonies, and interstellar probes might already be commonplace. Does that sound outlandish? Then bear these facts in mind:

In 1946 ENIAC was the scientific marvel of the day. This computer weighed 30 tons, stood two stories high, covered 15,000 square feet, and cost \$486,840.22 in 1946 dollars. Today a \$2,000 kneetop portable can add and subtract more than 20 times faster. And, by 1990, the average digital watch will have as much computing power as ENIAC.

The collective brainpower of the computers sold in the next two years will equal that of all the computers sold from the beginning to now. Four years from now it will have doubled again.

It's hard to remember that this is science fact, not fiction. How do people keep pace

with change like this? That's where we come in. We're CW Communications, Inc.—the world's largest publisher of computer-related newspapers and magazines.

Every month, over 9,000,000 people read one or more of our publications

Nobody reaches more computer-involved people around the world than we do. And nobody covers as many markets. In the United States we publish three computer/business journals. *Micro Marketworld*, for businesses selling small computers and software. *On Communications*, the monthly publication covering the evolving communications scene. And *Computerworld*, the newsweekly for the computer community, is the largest specialized business publication of any kind in this country.

We also offer seven personal computer publications. *InfoWorld*, the personal computer weekly, is a general interest magazine for all personal computer users.

The other six are monthly magazines that concentrate on specific microcomputer systems. *PC World*, the comprehensive guide to IBM personal computers and compatibles. *inCider*, the Apple II journal. *Macworld*, the Macintosh magazine. *80 Micro*, the magazine for TRS-80 users. *HOT CoCo*, the magazine for TRS-80 Color Computer and MC-10 users. And *RUN*, the Commodore 64 & VIC-20 magazine.

And we have similar publications in every major computer market in the world. Our network of more than 55 periodicals serves 25 countries. Argentina, Australia, Brazil, Canada, Chile, Denmark, Finland, France, Greece, India, Italy, Japan, Korea, Mexico, The Netherlands, Norway, People's Repub-

lic of China, Saudi Arabia, Southeast Asia, South Africa, Spain, Sweden, United Kingdom, United States, and West Germany.

The sooner we hear from you, the sooner you'll hear from our readers

Simply put, we'll make it easy for you to reach your target audience—and for them to reach you. Call today for more information. You'll find the number below.

WILLIAM BRAMBLE, III

*D*esign your own spiffy programs with colorful Koala (or other graphics programs) pictures. This short utility lets you easily load those works of art into your own programs.

Program Painter

By ART PARADIS

While the KoalaPainter program lets you create colorful pictures that you can save on disk, it doesn't enable you to use those pictures with ease in your own programs. But now there's a program that does. The K-PIC-Converter program loads a Koala picture file, then outputs the file to disk in a usable format.

Also, you can easily modify K-PIC-Converter to perform the same task on picture files of other graphics programs. You need only change the addressing information in lines 1220-1240 to accommodate the format of the other picture files and replace lines 400-490 with a command to load them. This assumes that they load into an accessible place in memory, not under the Kernal or Basic ROM.

Using the Program

The format of the Koala filename presented a bit of a problem in that the filename is always 15 characters in length, and the first character is always a nonprinting reverse character (called up by the command CHR\$(129)). This made entering the Koala filename into K-PIC-Converter a bit tedious, what with having to pad the filename with spaces and count the characters. Therefore, I developed a short machine language routine that takes care of the nonprinting character and the padding of the filename.

When the program requests the

Koala filename, you enter the alphabetic characters only—no reverse symbol and no extra spaces.

When you run the program, you'll be asked to enter a Koala picture filename and reminded not to enter the reverse symbol or trailing spaces. At this time you should have in your drive the disk containing the Koala picture file you wish to convert.

The Koala file will then be loaded into memory, and you'll be asked to insert the disk on which you wish to save the new picture file. Next, you'll be asked to enter a filename for the new picture file and a background color number (0-15).

The new picture file will then be recorded on your disk in a usable format and loaded back into memory in a usable location. A message will be displayed, asking you to press a key to view the picture. This is done to verify a successful operation.

New Files

Your new picture file will actually be three separate sequential files. I decided to break the Koala file into three segments for easier handling. Since they're sequential files, you may load them into any proper location for multicolor hi-res graphics. I chose to load them into high memory (bank 3) in order to keep them out of your Basic program area.

When you list the disk directory, you'll see that the filenames consist of

identifiers in addition to the filename you specified. They will be: CM, for color memory; TBS, for video matrix; and BIT, for bit-map information. This avoids trying to save three files with three different names.

Pictures in Your Program

Listing 2 is an example program that allows you to view your new picture files by using subroutines. You may include the subroutines in your programs to call your pictures from disk as they are needed. This lets you use as many pictures in your program as you have room for on your disk(s), without using up any Basic program space (great for an adventure game).

To call a Koala file from within your program, you have to assign a filename to F\$, set the background color and then use the Gosub statement to load the Koala file. For instance:

```
10 F$ = "FILENAME"  
20 A$ = "0:CM" + F$:B$ = "0:TBS" + F$:C$ =  
   "0:BIT" + F$  
30 BG = NUMBER  
40 GOSUB 9000: GOSUB 9110
```

Lines 10-40 are similar to lines 140-200 in Listing 2. Be sure to include lines 9000-9240 in your program. Incidentally, assigning the background color in this way allows you to use the same picture with different backgrounds (a day and night scene, for example).

RUN It Right

C-64; C-128 (in C-64 mode)

RUN JULY 1985 / 21

Program Operation

The operation of the main program is fairly straightforward. It accepts a Koala filename input and Pokes it into memory at a location that is then accessed by the machine language routine to load the Koala file.

Next, it asks you to enter certain information and then outputs the new files to disk. This is done by putting addressing information, in low-byte/high-byte format, in the A, X and Y registers of the microprocessor, via memory locations 780, 781 and 782. It then calls the Kernal Save routine with a SYS 65496 command. A similar process is used to reload the files into memory.

The program then switches to high memory (bank 3) and relocates the screen to allow viewing of the picture after a key is pressed. When you press a key again, the program switches back to normal low memory (bank 0).

This process is a little slow because

the top line of color memory is saved in an array when switching from the picture screen in high memory to the text screen in low memory, and it's restored when switching back again. If this weren't done, the text screen might mess up color memory for the picture.

You needn't save color memory if you switch to the picture screen before loading a picture. Also, if you switch to the picture screen first (bank 3, in this case), you'll be able to see the picture take form as it loads. I find this much more interesting than watching a blank screen while the picture loads. This is the procedure I used in Listing 2.

The bit-map information loads at 57344, under the Kernal. This is the only space available in high memory for an 8000-byte segment. Color memory loads at 55296 because it cannot be used anywhere else.

Video matrix loads at 49152. I

chose this location so I could include sprite information for a specific picture and save it with the video-matrix file. If you choose to do this, you may include many sprite configurations in your programs in the same manner that you include pictures, without using Basic program space to Poke them into memory. Multicolor sprites seem to work best with multicolor pictures.

To quit the program, press Q. The files generated by K-PIC-Converter can be used by any language that can read C-64 Basic sequential files.

If you don't want to type in the listings, just send me your name and address and \$7, and I'll send you a disk, postage paid, containing K-PIC-Converter and the example program. 

Address all author correspondence to Art Paradis, 2147 W. Romneya Drive, Anaheim, CA 92801.

A High-Performance Turtle

By RICHARD HOLLERAN

*Slow and steady will win
the race every time. Just type in
this Basic program to add nine
new commands for using high-
resolution turtle graphics on your
C-64 or C-128.*

The accompanying turtle graphics routines (see Listing 1) add nine new commands to Basic. You can use these commands in a program as easily as any other Basic command. Listing 1 will activate the commands for you, and Listing 2 will give you an idea of how to use them in your own programs. The routines are written in machine language and do, indeed, execute quickly.

The Commands

A short explanation of each new keyword follows. For a fuller illustration of their use, type in Listing 2.

RESET is the initialization command; it centers the imaginary turtle on the hi-res screen and clears and turns on the hi-res screen.

HIRES allows you to switch directly to the hi-res screen without clearing it or repositioning the turtle.

TEXT switches you from the hi-res to the text (normal) screen.

COLR allows you to select the hi-res colors. For example, COLR 0,6 sets the screen to black (0) and the turtle lines to blue (6). The numbers of the colors are the same as those found in the C-64's owner's manual. (It's unfortunate that this command cannot be spelled COLOR, but the embedded OR keyword prevents it.)

LEFT X alters the turtle's heading in the counterclockwise direction. X is any number or numeric expression and is measured in degrees.

RIGHT X alters the turtle's heading in the clockwise direction. X is any number or numeric expression and is measured in degrees.

MOVE X is the command that propels the turtle, causing it to draw a line on the screen. X is any number or numeric expression. However, if X is negative, no move will take place.

TAILUP causes the turtle to lift its tail, allowing it to move without drawing.

TAILDOWN sets the turtle's tail down so that it will leave a line when it's moved. The tail is always set down by RESET.

PLOT plots any specified X,Y point on the hi-res screen. X values are limited to the range 0-319, Y values to 0-199.

If the turtle's travel takes it off the screen, no harm is done. The point or line is simply not Poked into memory. However, in the case of the PLOT command, a Y value greater than 255 will cause an Out Of Range error.

Shaping Up Your Pixels

On many computers, the shape of an individual pixel (picture element) is rectangular rather than square. On the 64, in particular, the pixels are taller than they are wide. As a result, a line that is 100 pixels long horizontally appears shorter than a 100-pixel line plotted vertically.

To compensate for this difference,

RUN It Right

MAKE A BACKUP COPY WITH

NEW!
Version 2.2

DiskMaker

with
MasterKey

99%
EFFECTIVE

THE AUTOMATIC DISK BACKUP SYSTEM FOR YOUR 64 & 1541 DRIVE!

- Uses NEW Vari-sector track scanning process
- Actually copies a FULL disk in only 3 MINUTES!
- Easiest to use — TOTALLY automatic copy utility
- NEW Auto-Sensor detects and copies half-tracks
- Breaks through LATEST protection schemes
- 3 copiers in 1! Includes FAST Copier, VARI-SECTOR Copier, and HALF-TRACK Nibbler
- Copies normal & HALF-TRACKS up to track 40
- NEW sync-seeking logic reduces copy time
- 100% machine code for fast, RELIABLE operation

- NO analysis required, just swap disks...& NO damaging drive knock during errors, format, or copying
- Detects & DUPLICATES extra sectors, hidden ID's, altered headers, frequency & track density
- All copiers AUTOMATICALLY put "errors" on backup
- UNLOCKS protected disks for backup copying
- FASTEST & most advanced backup copier you can buy
- Writes errors 20, 21, 22, 23, 27, 29 WHILE COPYING!
- Transforms your 1541 into a SUPER-FAST copy drive!
- PRODUCT SUPPORT tel. #, revisions, and upgrades

UP TO 4 TIMES FASTER THAN OTHER COPIERS!

ONLY

\$49.95

for entire system

To order CALL **805-687-1541 ext. 84**
Technical line 805-682-4000 ext. 66

Order by phone 24 hrs./7 days or send cashier's check/money order payable to BASIX. Visa, MasterCard & American Express include card # and exp. date. CA residents add 6% tax. Allow 2 weeks for clearance of personal and co. checks. Add \$3.90 shipping/handling for continental U.S., \$5.50 for UPS air. COD's shipped to 48 states only, add \$4.00. AK, HI, APO, FPO, add \$7.50. CANADA add \$10.00. Other Foreign orders add \$15.00, and remit certified U.S. funds only. No credit card orders from outside North America. Dealers & Distributors invited & supported.

when the program computes the increment in the Y direction (the sine of the current angle), the increment is multiplied by a fraction, the default value of which is 0.75. I have found this value to be correct when using the 64 with a Commodore 1701 monitor. While using a Gorilla monitor, I have found that 0.8 is a good value. To determine whether or not you may want to change the value of this fraction, type:

```
RESET:FOR T=1 TO 4:MOVE 90:LEFT
90:NEXT
```

If the resulting picture looks very nearly square, fine. If your picture appears taller than it is wide, then you'll want a smaller fraction, say 0.65. If your picture is wider than it is tall, then use a larger fraction, such as 0.8. (These values are suggestions only.) With a little bit of experimentation, you should be able to find the fraction that best suits your monitor. In order to test a value, substitute it

for Z in A=USR(Z) and enter it on your 64. For example, A=USR(0.8).

Behind the Scenes

You may be interested in learning the method I've used to add these new commands to Basic. Rather than use a wedge (as far as I know, this program is compatible with the DOS wedge), I delved deep into the Basic interpreter to see how it tokenized keywords. I discovered that when Basic is unable to tokenize a word, it assumes that it is looking at a variable name and jumps to the LET keyword routine (it is because of this that it is unnecessary for you to type LET every time you assign a value to a variable).

It is possible, as this program illustrates, to move Basic into RAM and redirect this particular jump to a routine that checks for additional keywords. If the program is still unable to tokenize the word, then the jump to LET is belatedly made. (Note that this

program does not convert a token to a corresponding number as Basic does. As a result, a token must be converted every time it is encountered.)

The main advantage that this implementation has over the wedge is speed. While a wedge intercepts every single character Basic encounters, the method used here looks only at characters Basic can't resolve into tokens. The only thing that is slowed as a result is the assumed LET. The slowdown is imperceptible, and, if you were really interested in getting as much speed as possible, an explicit LET is faster, anyway.

I hope you have fun with this program. If at any point you find the computer rejecting the turtle commands, POKE 1,54 should correct the problem. R

STARPOINT SOFTWARE proudly presents

ISEPIC

[say Icepick], a revolutionary new concept in software de-protection for the Commodore 64. ISEPIC is not a disk duplication system, but an extraordinary hardware/software combination that actually bypasses any disk protection scheme. ISEPIC captures and saves the protected program as it runs in the 64's memory, this "snapshot" becomes accessible to the user for complete inspection and alteration. From this image, ISEPIC can automatically create a compact, auto-booting, fast-loading file which is completely unprotected and self contained.

- ☆ Copies ALL memory-resident software
- ☆ ISEPIC'd programs load many times faster than originals
- ☆ ISEPIC is invisible to software—cannot be defeated
- ☆ Eliminates drive "knock" due to antique protection schemes—adds years of life to your drive
- ☆ Automatically "cracks" protected programs into single, auto-booting, super-fast loading files
- ☆ Place multiple programs on a single diskette
- ☆ Create auto-booting, fast-loading versions of your own programs
- ☆ Cracked programs are completely self-contained and run independently of the ISEPIC adapter
- ☆ Copies software with a flick of a switch
- ☆ ISEPIC comes complete and ready-to-run, just plug into expansion port
- ☆ Programs cracked by ISEPIC may be used on MSD or 4040 drives as well as hard disks regardless of original protection schemes

When ordering by mail:

- * \$64.95 + 3.00 shipping
- * \$64.95 + 4.00 COD orders
- * Calif. residents add 6% sales tax
- * VISA or Mastercard accepted
- * Shipping out of USA \$6.00

Please allow 4-6 weeks for delivery.

EARL KELLENY

No more endless waiting for your database records to print out. Let DFPrint, another module to add to the previously published Datafile, speed things up for you.

Datafile Fast Print

By MIKE KONSHAK

By now, probably several thousand readers of *RUN* are using my database management system, Datafile (November and December 1984), which was published with two companion programs called DFReport and DFMail. This article is an addendum to Datafile; it introduces a program that significantly improves Datafile's performance.

Before I describe this new addition, however, let me first review Datafile, then address an important issue.

A Brief Look at Datafile

Datafile provides a quick and easy way for you to create a custom database that you can store in sequential files. You may add, delete, modify, sort and view records, as well as format a disk, scratch and rename files.

Once you've created a datafile and accumulated records, you may transfer program control to either DFReport or DFMail. These programs allow you to print custom-formatted reports and labels. After you define the printouts, the formats are written to the disk into special format files alongside the datafiles.

During printing, you may choose from options that allow you to print all the records in a file, individual records (by record number) or only those records with common fields. After you print something, you may continue printing, transfer to another program or quit.

I've just given a very brief description of Datafile (you will have to read the back issues for more information). My goal was to introduce Datafile to those folks out there who are new to *RUN*. That way, the rest of this article will make some sense.

A Problem and its Solution

One factor that makes Datafile nice to use is its speed in bringing up records in your datafile. This is possible because the entire datafile is held in memory in string arrays.

One drawback of a memory-based database is the limited number of records possible. Databases are flexible in that you may define the number of fields per record, as well as their length. Obviously, many long fields per record will result in fewer records. On the other hand, the fewer and shorter your fields, the more records you can store.

Another drawback, which I find particularly annoying, is garbage collecting, which my wife, Becky, describes as "the lights are on, but nobody's home."

In order for the computer to ensure that you have room to run your program, Basic will allocate, on a continual basis, any memory space that may be available. Assume, for example, that the variable A\$ is set to equal

COMMODORE USERS LIKE
RUN MAGAZINE

which takes up 33 bytes of memory (each character and space uses one byte). Now, also assume that right behind A\$ is B\$, which is equal to

RE-RUN IS A NEAT DISK

Counting the number of characters and spaces in B\$, you see that B\$ takes up 21 bytes.

Now do as follows: C\$=A\$:A\$=B\$:B\$="". It appears that A\$ is now 21 bytes instead of 33; B\$ is now a null string, or 0 bytes, instead of 21; and C\$, which wasn't even in existence before, is now 33 bytes. (B\$ is still addressable in a memory location, even though it does not carry any significant value.)

But, believe it or not, B\$ still takes up 21 bytes because of its initial value. A\$, although it now only has 12 significant bytes, is still 33 bytes long for the same reason. The total number of bytes used by A\$, B\$ and C\$ is then 75 (33+21+21), even though those variables only contain a total of 54 characters and spaces.

After a while, Basic realizes that the changes to the variables are wasting too much space. The operating system then takes over, interrupting whatever the program happens to be doing in order to free up memory space.

When it finishes, A\$, B\$ and C\$ will only be using up 54 bytes of memory. The time that this takes is strictly dependent upon the number

RUN It Right

C-64; C-128 (in C-64 mode); 1541 disk drive
Any ASCII or Commodore printer

of variables you use and the size of your program. (If you have many variables and a large program, your computer will appear to lock up.) You may perform the same memory-freeing operation yourself by using the Basic token FRE(0).

What does all this have to do with Datafile? The records stored in memory are kept in large arrays, which do not take up much space when empty. If a datafile accumulates a large number of records (around 75% full), garbage collecting may become a severe nuisance.

Since strings are never moved in the Datafile program, you may not notice it very much, unless you delete or modify records. But, in the printing programs (DFReport and DFMail), variables are reassigned continually (because there was no way around it), and the garbage collector raises its nasty head.

I use a sample datafile of 450 records to test Datafile. It takes 3½ hours to print out the entire file. Every 25 records or so, the computer goes bye-bye for around 12 minutes. I'm sure many of you have experienced this tedium.

Well, the wait is over—Datafile Fast Print (DFPrint) has arrived! It cures the garbage-collection problem simply by never giving the operating system a chance to get involved.

DFPrint is an independent program that reads your datafile directly from the disk drive and, using your predefined format files, prints your reports or labels without interruption. My 450-record datafile now only takes 12 minutes to print out!

All About DFPrint

The rest of this article will be devoted to describing the operation and use of DFPrint. If you're already familiar with using DFReport or DFMail, you'll notice many similarities in the menus and sequence of operation. Both report and label functions are combined in DFPrint, with one additional feature—DFPrint lets you send printer commands without exiting the program. (More about this later.)

DFPrint Instructions

To load DFPrint, type LOAD"DFPRINT",8<return>, then RUN<return>.

The following menu appears. Note that reversed screen characters are enclosed in brackets in the text. Keys to be pressed are surrounded by inequality signs (< >).

■

*The wait is over—
Datafile Fast Print
has arrived! It cures
the garbage-collection
problem simply by
never giving the
operating system a
chance to get
involved.*

■

```
[ DATAFILE FAST PRINT ]
[ BY MIKE KONSHAK (C)1985 ]
```

THIS PROGRAM WILL PRINT A SEQUENTIAL FILE, WHICH WAS PREVIOUSLY WRITTEN AND FORMATTED BY [DATA FILE], DIRECTLY TO THE PRINTER. THE ORDER OF THE RECORDS WILL BE THE SAME AS THE MOST RECENT SORT AS WRITTEN IN THE CURRENT FILE.

```
[O]PEN FILE ON DISK
[S] DISK DIRECTORY
[Q]UIT PROGRAM
```

```
[ PRESS THE APPROPRIATE KEY ]
```

Insert the disk containing the sequential datafiles created by Datafile. Pressing S will display the disk directory, so you may view the files on the disk. Pressing Q obviously terminates the DFPrint program. Pressing O will initiate a prompt, asking for the name of the datafile that you want printed. Enter the name of the file (MAIL LIST, for example), then press the return key.

Note: Do not enter the special characters as displayed on the directory. These characters (DF], RP] and ML]) keep related datafiles and format files together without a conflict in duplicate names.

If you entered a filename that isn't present on the disk, you'll receive an error message and must try again. Having successfully opened an existing datafile, you will be presented with the following menu:

```
[ RECORD PRINTOUT MENU ]
[L]IST UNFORMATTED
[R]EPORT FORMAT
```

```
[M]AILING LABELS
[C]HANGE LABEL SIZE
[S]END PRINTER COMMANDS
[E]XIT TO RESTART
```

```
[ PRESS THE APPROPRIATE KEY ]
```

List Unformatted

This option lets you print your datafile without a predefined format. The records will be numbered and printed in rows, one field after another. Review the article on DFReport for more information.

Pressing L will immediately start the disk drive, turning on the red light, and the screen will display the following:

```
[ PRINT OPTIONS MENU ]
[A]LL RECORDS IN FILE
[F]IND RECORDS WITH COMMON
  FIELDS
[E]XIT BACK TO START
```

```
[ PRESS THE APPROPRIATE KEY ]
```

Pressing E closes the current file, turning off the drive light, and sends you back to the beginning of the program.

Pressing A starts the drive spinning and the printer printing. Because the printer is slower than the drive, you'll notice the drive's motor turning on and off during the printing operation as it waits for the printer to catch up. If your printer has a 2K or larger buffer, the drive will not cycle as often.

Pressing F displays the following. (Note: For demonstration purposes, the sample file, MAIL LIST, will be used to demonstrate the operation.)

```
[FIND RECORDS WITH COMMON ITEMS]
```

```
[1] LAST NAME
[2] FIRST NAME
[3] CODE
[4] STREET
[5] CITY
[6] STATE
[7] ZIP
[8] PHONE
```

```
WHICH FIELD IS TO BE SEARCHED? <1>
<return>
```

"My purchase of RUN is a better investment than my computer—I get a much higher return on a much smaller investment!"—

D. Suggs, Tallahassee, Fla.

Join the thousands of C-64, Plus/4, and VIC-20 users around the world who enjoy subscribing to **RUN** every month. They've found **RUN** to be an unrivaled Commodore resource. And they're right—**RUN** is one of the fastest-growing Commodore magazines on earth!

The convenience of personal delivery, plus a savings of **44% off** the newsstand price are yours when you subscribe to **RUN**—the year-round Commodore companion.

You get **12 great issues** for just **\$19.97**, plus special announcements and offers available only to **RUN** subscribers!

Each month, you'll learn the fun of computing while exploring the limitless possibilities of your Commodore.

Here's what satisfied readers are saying:

"I read many magazines after I bought my 64, but I

think that yours is the best. I now have a subscription and look forward to every new issue."—Eric D. Stolen, Manistee, MI

"In a remarkably short time, **RUN** has become the best journal for Commodore computer users... I appreciate the coverage you devote to reader comments and questions (Magic, Mail **RUN**, and Commodore Clinic), as there is nearly always an interesting hint or tip in one of these columns!"—J. O'Hare, Victoria, B.C. Canada.

Throughout the year, you'll find:

- Exciting tips, Commodore tricks, and programming ideas in **RUN**'s most popular column, "Magic".
- Challenging, fun, and educational software.
- A rundown of the products best suited for the new C-16 and Plus/4.

The benefits roll on... time-saving programming ideas, no-punches-pulled product reviews, applications to broaden your computing horizon, tutorials and assistance from renowned authors in the Commodore field, and of course, great ideas and tricks that have worked for fellow Commodore users.

Act today—and **save 44%**—joining the thousands of subscribers who've found that **RUN** is their best computing companion. Just send in the coupon or insert card, or call **TOLL-FREE 1-800-258-5473**. In NH, dial 1-924-9471.

Commodore 64, VIC-20 and PLUS/4 are registered trademarks of Commodore Business Machines, Inc.

YES! I want to make a great investment.

Send me 12 issues of **RUN** for the low subscription price of \$19.97. I'll save 44% off the newsstand price.

RUN • Box 954 • Farmingdale, NY 11737

357B3

ber (in the above example, field #1), then press the return key. The next prompt asks for a common item in the field entitled LAST NAME. When you press K and the return key, the disk drive starts spinning.

As the program searches, it displays the record number currently being processed. Every time it finds a "K" as the first character in field #1, it causes the printer to print the record. If there aren't any records that match your entry, nothing is printed. Again, review the earlier articles for an expanded explanation.

CAUTION: Once the printing operation has started and the sequential file is being read, no interruptions will be permitted. Any situation that causes the operation to cease will force you to restart the entire process.

After the program finishes reading and printing files, you'll be returned to the beginning of the program. There will be a new option that states:

[R]EPEAT FILE: [MAIL LIST]

This allows you to continue working on the file you originally opened (in this case, MAIL LIST). Pressing R sends you directly to the Record Printout menu as before, where you choose one of the various options. The explanation of the options continues.

Report Format

Pressing R at the Record Printout menu initiates a prompt for the name of the report format file you'll be using for your report. The name of the datafile you originally opened will be shown (MAIL LIST). If this is the name of the format file you want to use, press the return key. Otherwise, enter an alternate name.

The disk drive will load the format into memory. The Print Options menu will be displayed as previously described under LIST UNFORMATTED, with a note that says "Position Paper In Printer At Top of Page."

The report heading will then be printed, followed by the spinning of the disk drive and the printing of the records. Automatic paging will occur every 60 lines, with the titles of columns printed at the top of each page. If you have Datafile 2.9, the summation, or totaling, of the last column will perform as usual, if formatted accordingly.

Mailing Labels

Pressing M at the Record Printout menu will again prompt a request for the name of the mailing label format to be used. Press the return

■

*This program's
Printer Command
routines give you
many options for
utilizing the
capabilities of your
printer, depending, of
course, on its
flexibility.*

■

key or alter the displayed name accordingly.

The Print Options menu will also display an option not found in the report sequences:

[T]EST LABEL(S)

Every time you press T, the printer prints a series of numerals based upon the selected label size. The default size is the standard label. Use this function to align your labels before you start printing records. Remember, once you start printing, there's no turning back!

Change Label Size

Pressing C at the Report Printout menu allows you to change the size of the labels you're printing. (The format of the labels is still defined by your format file.) One use of this feature is that you might obtain a batch of odd-sized labels that you'll want to use with an existing format. Another possibility is to print out an address file, previously formatted for labels, on tractor-feed postcards. You should see the following screen:

```
[          LABEL SIZE          ]
[ST]ANDARD - 5 ROWS PER LABEL
             1/16 BY 3 1/2 INCHES
[L]ARGE - 8 ROWS PER LABEL
             1/16 BY 3 1/2 INCHES
[O]THER - CUSTOM LABEL SIZE OR
          NUMBER OF CHARACTERS PER ROW
NOTE: LABELS ARE SEPARATED BY
      ONE ROW
      32 CHARACTERS PER ROW IS STANDARD
[  PRESS THE APPROPRIATE KEY  ]
      Measure your labels and compare
```

them with a short printout of your file. If you have a label or special form that does not meet the first two choices, S or L, then press O. You will be given the following prompts:

ENTER NUMBER OF ROWS ON LABEL? 5
ENTER # OF CHARACTERS PER ROW? 32

Enter the dimensions that will perform best for you. A few trials may be necessary.

Send Printer Commands

This routine, obtained when you press S at the Report Printout menu, allows you to utilize the various capabilities of your printer. The screen displays:

[PRINTER COMMAND]

THIS ROUTINE WILL SEND CHARACTER STRING [CHR\$()] COMMANDS TO AN ASCII PRINTER. COMMANDS MUST BE ENTERED IN THE FORM OF INTEGERS SUCH AS:

```
? 27 (ESCAPE CODE)
? 66 (PITCH CODE)
? 2  (COMPRESSED MODE)
? *  (END THE SEQUENCE)
```

THIS WILL BE SENT TO THE PRINTER AS:

PRINT#4,CHR\$(27)CHR\$(66)CHR\$(2)

UP TO FOUR (4) NUMBERS MAY BE SENT, THE FIRST NORMALLY BEING [27], THE ESCAPE CHARACTER. END THE SEQUENCE BY PRESSING [RETURN] WHEN THE ASTERISK IS SHOWING. PRINTERS WILL VARY, SO CHECK YOUR MANUAL FOR THE CODES.

[ANY KEY] TO CONTINUE OR [EXIT]

The above screen displays an example of a series of codes that force a Gemini 10X printer to print in 12 characters per inch (cpi), which provides a 96-character-wide report. Since DFReport defines a report up to 132 characters wide, this is a handy feature if your printer only has a nine-inch carriage. You might use this routine to print labels in italics at 10 cpi, then to print reports in pica type at 15 cpi. Many options are possible, depending on the flexibility of your printer. If you choose to continue, the result is:

```
[          SEND PRINTER COMMAND          ]
ENTER CODE, THEN PRESS [RETURN]
[RETURN] ONLY TO QUIT
? 27
? 66
? 2
?*
[A]NOTHER CODE
[T]EST CHANGE
[E]XIT TO PRINT
[  PRESS THE APPROPRIATE KEY  ]
```

A NEW YEAR, A NEW ReRUN

1985 March Quarterly

You live in a complicated world. The last thing you need is stress that comes from do-it-yourself programming.

This year, let the new **ReRUN** give you great ready-to-load Commodore-64, Plus/4*, and VIC-20 programs more often.

Beginning in March, the best and most recent programs listed in **RUN** can be yours every four months. That's right, **ReRUN**'s going quarterly! AND... Commodore-64 and VIC-20 programs will be offered on separate cassettes/disks! No more getting only half of what you're looking for.

Every quality cassette or disk will contain approximately 10 outstanding programs for home, business, or school. And just in time to help you face the IRS, the March **ReRUN** will be highlighted by "Tax Records 64"... it keeps track of all your deductions so that you do less groaning on April 15! (Runs on the C-64 and Plus/4.)

Also, in March, "Hi Res Painter" will let the artist in you create a masterpiece on your VIC screen. Plus, March **ReRUN** offers challenging, fun-filled games like "Quatro" and "Fly The Grand Canyon".

Your quarterly comes with a complete booklet of documentation and loading instructions. The hard work has already been done. All you do is load, run, and enjoy!

Order your March **ReRUN** on cassette for just **\$11.47,**** or on disk for just **\$21.47**. Simply return the coupon today, or call **TOLL FREE 1-800-258-5473**. In NH, dial 1-924-9471.

It can be just the beginning of more enjoyable, relaxing programming in 1985!

* Plus/4 programs are contained on the C-64 loader.

Commodore 64, VIC-20 & Plus/4 are registered trademarks of Commodore Business Machines, Inc.

** Prices include postage and handling.

Disks contain more programs than cassettes.

I Want To Begin '85 With Great Programming!

Please send me the March issue of **ReRUN**:

May Not Reprint Without Permission

Pressing the return key when the asterisk (*) is showing, without entering a number, displays the options shown above at the bottom of your screen. If you press E, you'll return to the Report Printout menu. No printer codes will have been sent.

Pressing T prints the alphabet on your printer in order for you to see what effect your command had on the printout. Pressing A lets you send another series of codes, either to cancel the current modification or to

send new or additional codes (you might want compressed print in a Double-Strike mode). Press T each time to check the changes.

Note: Do not send commands that will skip over the perforations of the paper, since the report part of both DFReport and DFPrint take care of this task.

If you missed the earlier issues or do not wish to type in the listings, send me \$8, and I'll supply you with a disk containing the current revi-

sions of Datafile (2.9), DFReport, DFMail and DFPrint, along with several sample datafiles and format files.

If you have any problems or suggestions that need a reply, send me a self-addressed stamped envelope and I'll try to respond as soon as possible. Also, let RUN's editors know how you like the programs. R

Address all author correspondence to Mike Konshak, 4821 Harvest Court, Colorado Springs, CO 80917.

Listing 1. DFPrint program.

A BRIGHT NEW STAR FOR A COMMODORE TO PRINT BY

Now you can own
a sophisticated, afford-
able printer that's made just for
your C-64.[™] Star's new SG-10C.[™]

Here's a dual-mode Star printer that delivers 120 cps draft/30 cps *near-letter-quality*. With an ample 2K memory capacity. Interface cable. And friction and tractor feed. All standard.

The SG-10C is Star's made-for-Commodore[®] printer. Made to be the easiest to interface. Made with more features (no add-ons necessary—just

plug into your computer and go to work). And made at a price that can't be beat. There just isn't a better mate for your Commodore.

You've got the computer. Now get everything out of it. Get the Commodore-dedicated SG-10C from Star. It's the best connection you'll ever make.

star[®]

THE POWER BEHIND THE PRINTED WORD[®]

200 Park Avenue, New York, NY 10166

Chicago, IL (312) 773-3717 • Boston, MA (617) 329-8560
Irvine, CA (714) 586-8850

Flying your helicopter low to the ground, you must use lightning-fast reflexes to evade ground obstacles and merciless attacks by heat-seeking missiles.

Chopper Run

By HOWARD CAMPBELL

You are the pilot of a reconnaissance helicopter trapped within enemy territory. In an effort to return to your home base, you must cross a heavily defended mountain region. You must fly low to the ground in an attempt to evade a heat-seeking missile that is trying to destroy your chopper. You must destroy the missile first, by forcing it to strike the ground obstacles you're trying to avoid. Each time a missile is destroyed, it is replaced by another one.

Preparing for Fight or Flight

This is the scenario for Chopper Run. Before playing, plug your joystick into control port 2. Your helicopter will move in the direction in which you push your stick.

After loading and running the program, the computer will ask if you wish to read the details about the game. Press the Y key to read the details or the N key to continue to the game.

Next, you will be asked to choose a skill level from 0 (hardest) to 5 (easiest). The more difficult the skill level, the faster the missile speeds towards your helicopter. After you've chosen a skill level, press the return key. On the screen you will see that you are in enemy territory.

At the beginning of the game, your helicopter is at the bottom center of the screen. The ground objects scroll down the screen, creating the illusion that you are flying above the ground. Push your joystick forward to advance your chopper up the screen. If you don't do this, the heat-seeking

missile will smash into your chopper, and you'll have to start the game over.

Move your chopper in any direction to avoid ground objects and the approaching missile, but don't advance too far up the screen. You won't be able to react soon enough to swerve away from ground objects.

Chopper Strategy

No matter in which direction you move your chopper, the missile will always be vertically aligned with it. You can avoid getting hit by the missile by positioning your helicopter in front of a ground object. This way, the missile will hit the ground object and destroy itself. A new missile will then appear at the bottom of the screen and begin advancing.

The screen continuously displays your score and the highest score in the game so far. There is no maximum score. The game ends when either your chopper crashes or is hit by a missile.

That's all there is to it. But don't let Chopper Run's simplicity fool you; it takes a lot of practice just to evade the ground objects and missiles, and it takes an even greater skill to destroy the missiles.

If you don't want to type in this program yourself, send me a self-addressed stamped mailer, a blank cassette and \$3, and I'll send you a copy of the program on tape. [®]

PERIPHERAL SYSTEMS of AMERICA INC.

UNBEATABLE BELIEVE IT!

Others may talk, but **no one** can deliver the **features**, the **performance** or the **compatibility** of our remarkable **CS-1 Disk Drive**. Go ahead. Make us prove it! Bring us your toughest test, your trickiest problem — if it works on the 1541™, it will work on the powerful CS-1. But you be the judge . . .

WE'RE BETTER. BELIEVE IT!

The CS-1 is not only **compatible**, it goes one step further. It comes with its own proprietary operating system called **Q-DOS™**, which doesn't have the bugs and quirks that exist in the 1541 DOS. Now, the SAVE function works like it's supposed to. Now, you can reduce read errors with a built-in automatic DATA ERROR CORRECTION capability . . . and much more!

ALL THIS, PLUS AN ADDED BONUS!

Buy a CS-1, and you'll receive the two most popular computer utilities . . . absolutely **FREE**. They include **COPY-Q™**, the high-speed, single or dual drive copy program that gives you quick and easy back-ups. And **Q-LOAD™**, the program that speeds up the loading time on most programs. That's almost \$100.00 worth of powerful software **FREE** with your new CS-1 Disk Drive!

SO GO AHEAD. PUT US TO THE TEST.

Visit your local computer store today and test drive the new CS-1. You'll like what you see . . . and Seeing is Believing.

JAMES ENDICOTT

Watch Your Speed!

By JOSEPH J. SHAUGHNESSY

Is your disk drive just puttering along, or is it breaking the speed limit? Whichever, these two programs act as an efficient traffic cop in helping you to check and adjust your drive's motor speed.

One source of disk drive problems, though not as common as misalignment, is incorrect rotational speed. The disk drive is designed to rotate the disk at a preset rpm. With the passage of time and use, the drive speed can change (usually increasing).

This does no harm up to a point, but eventually the speed may deviate enough that you will start to experience errors in loading and saving programs. (You might mistake this for an alignment problem.) With the following two programs, you can remedy this problem yourself.

Listing 1, Disk Spinner, starts your disk spinning and keeps it going as long as you want. This is useful for one method of adjusting the motor speed on either the VIC-20 or the C-64. It can also be used with disk-head cleaners to keep the drive operating for the recommended 60 seconds.

Listing 2, the 1541 Motor Speed Check, lets you check the motor speed without disassembling your disk drive; you can also use this program to adjust the motor speed. This second program can only be used with the C-64; I could not develop a similar program for the VIC-20, due to differences in the real-time clocks built into the two computers.

Motor Speed Problems

If you have a C-64, run Listing 2 before disassembling your disk drive to see if your motor speed is within the acceptable limits. A word of caution here: If your disk drive is out of alignment, or the motor speed is too far off the mark, this program may not work. Since motor speed is a less frequent problem, you should always suspect misalignment first. If you are doing a realignment on your disk drive, you should check the motor speed at the same time, while you have your disk drive disassembled.

If you need to adjust the motor speed, you must completely remove the plastic case from the disk drive and place the drive upside down on your work area. (For disassembly instructions, see the companion article, "Keep Your Disk Drive in Line.") To make the adjustment, you will need a small flat-head (regular) jeweler's screwdriver, or other similar thin flat metal instrument.

With the disk drive upside down and the front door facing you, you will see a small hole on the left-hand side, about one inch from the front of the drive. Look inside the hole. You should see a very tiny screw. There should be, but may not be, some gradation marks next to the screw.

This little screw is what is used to adjust the disk motor speed. It is very sensitive, so you needn't turn it much. By following the instructions in Listing 2, C-64 owners can quickly adjust the drive's motor speed.

For VIC-20 and C-64 Owners

Both VIC-20 and C-64 owners can use the following method. With the disk drive disassembled and upside

down, notice that there is, in the center, near the front of the drive, a small wheel with a striped pattern on it. This is the drive motor. The striped pattern is used to adjust the motor speed.

You must work in a room with fluorescent lights or have a desktop fluorescent lamp to illuminate the disk drive. Notice that the striped pattern is marked with a 60 on the outer ring and a 50 on the inner ring. This refers to the type of power you are using. In North America, we use 60-cycle power, and therefore use the outer ring for adjustment. Most other parts of the world use 50-cycle power; hence the inner ring.

Turn on the computer and disk drive (be careful around the exposed parts). Load in the Disk Spinner program and run it. Observe that under the fluorescent lighting, the pattern on the motor seems to stand still or slowly rotate. Try turning the adjustment screw slightly. Notice that the apparent rotation of the pattern changes. Your motor speed is in adjustment when, by turning the adjustment screw, you can make the pattern appear to stand still.

After you have made the adjustment, press the space bar to stop the program and drive. When finished, reassemble your disk drive (with power off, please!).

These short programs are included in the disk-duplicating offer at the end of my companion article, "Keep Your Disk Drive in Line." 

Address all author correspondence to Joseph J. Shaughnessy, 8438 Lynda Sue Lane W., Jacksonville, FL 32217.

Keep It Clean

By MARGARET MORABITO

The maintenance of computer hardware has had little emphasis in user manuals and computer literature in general. For example, the *1541 Disk Drive User's Manual* fails even to mention that your drive's head will need cleaning periodically. The upkeep of the mechanical internal workings of computer equipment should not remain a mystery, as this void in your knowledge can lead to unnecessary equipment failure and costly repairs.

This article will help to clear up the mystery and will answer some questions you may not yet have asked, but inevitably will when your drive starts making mistakes when loading and saving programs. Specifically, you'll learn the how-to's of using a universal disk-drive head-cleaning kit to clean your 1541 disk drive.

Think of your disk drive as similar to an eight-track or cassette tape deck. They each have a head mechanism that presses against a moving surface in order to interpret information held on the magnetic tape or disk. After prolonged use, the head mechanism begins to collect foreign matter, such as dust and grime.

This collected matter impairs the head's ability to accurately transfer information. When your disk drive starts making loading and saving mistakes, your first act should be to clean the head, not go to the computer repairman.

How Your Drive Works

Here's a brief description of your Commodore disk drive. The 1541 is a single-head disk drive that handles single-sided disks. This means that the drive has only one read-write head and that only one side of your disk can be read. Because you insert

Learn this simple procedure for cleaning your disk drive head, and you may prevent serious equipment damage.

your disk with the label upward, many people believe that the information is on the upper side of the disk and the head is also on the top. This is logical, but incorrect.

The read-write head in your 1541 disk drive is underneath the disk and reads the bottom surface, not the top. So if you *must* throw your disks on grubby tables, throw them upside down. This will help deter damage to the information-bearing side of your disk. The best way to handle your disk is, of course, always to place it inside the protective envelope before putting it down.

Take a brief look at the top side of your disk. The large hole in the center is where the drive grabs the disk to spin it. The elongated opening beneath this hole is used as a pressure point. The flip side is the important side; it allows the drive head to touch the magnetic surface of the disk for reading and writing information.

If you peer inside the open door of your drive, you can see a white sectioned plastic disk on the top center and a gray plastic disk on the bottom center. These sandwich the central disk hole and cause the disk to spin when the drive is engaged. The drive head is about two inches beyond the hub mechanism and can't be seen without disassembling the drive (see Photo 1). But you don't have to see the head to clean it, so disassembly is not needed.

However, knowing the location of the head and what part of your disk needs to touch it is important when you try to use a universal cleaning kit with no machine-specific instructions.

Cleaning the Head

In order to clean the drive head, you'll need a 5/8-inch head-cleaning kit. You don't need to use a Commodore head-cleaning kit; the stores that sell Commodore computers also sell the universal kits under many brand names. As long as the kit has the correct size of disk, it will work.

Prices vary, but you should expect to pay around \$15. These kits will have a couple of floppies containing cleaning disks made of a white material. They also include a bottle of cleaning solution. Some kits may offer additional equipment for cleaning other parts of your computer.

ReRUN's GAMEPAK

When All You Want To Do Is Play Games

Now, a software package for Commodore 64* users who have dreamed of the ultimate in fun and games—**The ReRUN GAMEPAK!**

Action, skill, intrigue, and suspense, all on your choice of ready-to-run disk or cassette. The very best games ever published in RUN, **plus** several never-before-published bonus programs!

THE THRILL IS BACK!

This **Special Edition** brings back the thrill of Commodore games. You spend your time **playing** instead of programming. No keyboarding, no debugging, no headaches.

It's every Commodore user's entertainment extravaganza—the only **ReRUN** package of its kind this year!

NEW GAMES, NEW CHALLENGES

Order your copy now and enjoy the challenge of playing never-before-published games like:

- **"Ski"**... a downhill race with obstacles such as gates, trees, and even the Devil! Joystick optional!
- **"Hassle-Castle"****... a top-notch adventure game.

Find your way out of an ancient castle, but watch out for the obstacles. Realistic sound effects!

The ReRUN GAMEPAK also features a host of **RUN** favorites such as:

- **"Mystery of Lane Manor"**... a who-dunit game requiring a quick mind and quick hand.
- **"Find-the-word"**... helps you create your own find-the-word puzzles instead of relying on the Sunday paper.

IT'S EVERYTHING YOU'VE DREAMED OF!

The **GAMEPAK** includes a booklet with complete documentation and loading instructions. The hard work has already been done for you—you just load, run, and have fun!

Let **The ReRUN GAMEPAK** turn your game dreams into a reality by ordering your copy today. It's as easy as returning the coupon below, or by calling **TOLL FREE 1-800-258-5473**. IN NH, DIAL 1-924-9471.

Disks contain more programs than cassettes. Programs will run on the C64 and C128
* Commodore 64 is a registered trademark of Commodore Business Machines, Inc.
** Hassle-Castle is available on disk only.

YES! I want the ultimate in Commodore fun and games!

Please send me **The ReRUN GAMEPAK:**

Instructions accompanying most kits are scanty. They often fail to show you explicitly which side of the cleaning disk should be up or down. You could damage your drive's head if you run a single-sided cleaning disk wrong side down.

A standard cleaning disk is shown in Photo 2. To use the disk, pour cleaning fluid onto the exposed white material seen through the large cut-out section. This area corresponds to the exposed elongated opening on the bottom side of your disk, where the read-write head touches it. Insert the cleaning disk into your drive with the large cutout on the bottom side. The kit instructions will tell you to run the drive with the cleaning disk inside for 30 seconds.

For Commodore users, this is quite a feat, as there is no command for engaging the drive for such a long period of time. You could issue a series of dummy load commands, which would eventually add up to the 30 seconds, but this is cumbersome. For a short program that you can use to accomplish the 30-second drive action, see Joe Shaughnessy's article,

"Watch Your Speed," elsewhere in this issue.

Once the drive has been engaged for 30 seconds, the procedure is complete. Each cleaning disk has a multi-blocked label for you to check off the cleaning session you have just performed using that particular disk. Most disks can handle 13 sessions, but this will vary according to how dirty your drive is each time you use the kit. If the white material looks dirty, throw the disk away.

That you should clean your drive head is not debatable. How often you do this varies, however. Some kits recommend cleaning once a week,

but it actually depends on how often you use your drive. If your computer is being used eight hours a day, five days a week, then definitely clean it once a week. If you only use it in the evenings for an hour or so, you probably only have to clean it every month. Let common sense be your guide.

As you can see, cleaning your drive head is simple and easy, but it is still very important. Do-it-yourself maintenance is vital to a properly working computer system. You also can save lots of money by avoiding high-priced professional maintenance and even higher-priced repairs.

In addition, you should think about other simple maintenance measures that you can take to avoid future repairs—for example, keeping a dust-cover on your keyboard when not in use. Just don't take it for granted that your equipment will work forever without regular maintenance. R

NOT JUST ANOTHER PRETTY (INTER)FACE

THE PRINTMASTER/+G With IntelliFeatures™

If you don't care what your printouts look like, you could use any old interface. If you want full performance, with advanced features you can use, then the PRINTMASTER/+G is for you! The Printmaster/+G has many features found no where else: Full graphics compatibility with Epson, Star, Tally, Okidata, Gorilla, NEC, and more. Graphics speed has been maximized by reducing or eliminating print head shuffling. It's fast! Completes Commodore printer test program in 4 minutes, 400% faster than most other interfaces. Emulation, transparent, listing, and decimal modes, plus two special wordprocessing modes. Cassette or externally powered.

WHAT ARE INTELLIFEATRES? These are the special advanced features of the Printmaster/+G. Set all margins and page length. Single page pause. Double density and reverse graphics switch settings. Secondary address lock. Enhanced graphics characters. The Printmaster ROM contains some special Commodore machine language routines which you can access with a LOAD command, just like a disk drive. LOAD "S"; 4,1 displays the disk directory without destroying BASIC memory. LOAD "STATUS"; 4,1 displays complete Printmaster settings and status. And more! Add \$2.50 for shipping. Suggested retail \$119.95.

LOOK! 16K BUFFER EXPANSION - Plugs safely inside Printmaster/+G case. Accepts 16K in 40 seconds. Includes a second ROM which adds many more fantastic IntelliFeatures: LOAD "RENUM"; 4,1 rennumbers a Basic program. LOAD "OLD"; 4,1 recovers a NEW'd Basic program. LOAD "INSERT"; 4,1 merges a Basic program. Design and use Special character sets. LOAD "EDIT"; 4,1 to design special characters. Program any character to be up to 90 CHR\$. Many more features than we can list here. \$89.95.

LOOK! PRINTMASTER/S for RS232 printers - All of the features of the Printmaster/+G for an RS232 printer. Do graphics characters and dot graphics on your serial Epson or other supported printer. 300, 600, 1200, 2400 baud, word and parity. DTR or Xon-Xoff handshake. Plus/Minus 12 volts. Specify male or female DB25 connector. Add \$2.50 for shipping. \$139.95.

Keep Your Disk Drive in Line

By JOSEPH J. SHAUGHNESSY

Here's a do-it-yourself project that will save you costly repairs due to disk drive misalignment. Knowing how to use a Phillips-head screwdriver is the only prerequisite.

This article provides you with tips that might save you enough to pay for your subscription to *RUN* magazine for many years to come. I wish someone else had written it two years ago. I would have saved about \$100 in technician fees for service on my disk drive.

There are several million of you Commodore owners who have the 1540 or 1541 disk drive, and almost every one of you has needed, or will someday need, to have your disk drive realigned. Some of you probably need it right now and may or may not know it. Misalignment is the most common cause of failure in this disk drive.

Most of this article will consist of giving you step-by-step instructions for a do-it-yourself project, realigning the read/write head on your 1540 or 1541 disk drive.

Caution: Because you will be working with an electrical device, there is always the danger of electric shock or injury. Children and others unwilling or unable to follow directions and observe safety precautions

should not attempt this project. Neither *RUN* magazine nor the author will assume liability for damage or injury to yourself or your equipment. Performing this work will also void your warranty, so make sure that you have owned your disk drive for at least 91 days.

The only tool required is a small (size 1) Phillips-head screwdriver. An optional tool is a pair of needle-nose pliers for replacing some of the screws during reassembly. If you want to drill two holes in the bottom of your plastic case, you will also need an electric drill with an appropriate-sized bit (more about this in the reassembly section).

Preliminary Information

First, I'll discuss how programs and files are stored on disk. Each disk has 35 tracks, arranged concentrically, with track number 1 being the outermost and track 35 the innermost. Each track has from 17 to 21 blocks (the inner tracks have fewer blocks). Each block can store 256 bytes (or characters) of data. The middle track is track 18, which is special.

The first block (block 0) of track 18 is used to store the name and I.D. number that you gave the disk, a few other special codes and the BAM (block availability map). The disk drive uses the BAM to determine which blocks are available for storing

data and which blocks have already been used. The remaining blocks (1 to 18) of track 18 are used to store your disk directory.

The disk directory contains the names of your programs and files and also information on the type of file, its length and where the starting point is on the disk. Your actual programs and files are stored on the disk's remaining blocks. (664 blocks are usable on a brand new disk.) Storage of your programs and files begins on tracks 17 and 19 and proceeds both inward and outward from the center track, with 1 and 35 being the last tracks used.

When your disk drive begins to go out of alignment, the first tracks to become unreadable are on these outermost tracks (1 and 35). You'll find that you can load in programs near the beginning of your directory, while programs near the end will load with difficulty, if at all.

Ordinarily, programs near the beginning of the directory are stored near the center of the disk, since they were saved first, and later programs are stored farther out from the center. The last thing you will lose, as the alignment gets worse, is the ability to read the directory.

You can also tell that you are losing alignment when program loads start taking an exceptionally long time, and your red disk drive light flutters and blinks and the drive seems to chug and makes awful sounds (which are caused by the read/write head resetting itself against its stop when the first attempt to read a block is unsuccessful).

On a perfectly aligned disk drive, the red light will come on and remain steady throughout the load, with one major exception. Some companies copy-protect programs by deliberately "bad sectoring" certain blocks on the disk. During or after the program load, these "bad" blocks are checked by the program. If the disk drive can't read the bad block, the program knows that it is probably not dealing with a pirated disk. If it can read the block, the program will usually shut itself down.

It is suspected that the most probable cause of disk-drive misalignment is using commercial software with this "bad sectoring" type of copy protection. The repeated hammering of the read/write head against its stop may eventually knock the drive out of alignment.

Another reason for the red light

Photo 1. Drive with cover removed.

blinking during the loading of commercial software is that some companies load programs in sections, and the red light goes off between these sections. Other possible causes would be transporting your drive to another location, mishandling, long usage or, perhaps, gremlins.

The simplest test for disk-drive misalignment is to run the performance test program (using a disk you don't need anymore) or the short program found later in this article (using any disk—the program won't hurt it). Neither of these programs, however, will check for perfect alignment, since I've had disk drives that I know are not in perfect alignment pass these tests. The best way to test your drive is to use my Safe and Fast Disk Checker program (published last month in *RUN*), which runs both quickly and smoothly (see step #15 in the alignment procedure).

Once you've determined that your disk drive needs realignment, you're ready to advance to the actual alignment procedure.

In brief, you will first check the alignment of track 18 by loading in a long directory. You'll next check the alignment of the outermost and innermost tracks by running the short program in this article. Finally, you will check every track and sector for perfect alignment by running my Safe and Fast Disk Checker program.

We are now ready to begin. *Please* think and practice safety while doing this!

Disassembly Instructions

1. Turn off the disk drive power switch and disconnect all cables from the rear of the disk drive.

2. Place the drive upside down on a flat surface and remove the four Phillips-head screws.

3. Gently lift the disk drive off of the top cover and place right side up on a flat surface. Put aside the top plastic cover until reassembly time.

4. Photo 1 shows the top metal cover, which is held in place by two Phillips-head screws. Remove these screws and the top metal cover.

5. The green power light located on the lower front of the drive's plastic case is connected to the now-exposed circuit board by two wires and a plug. Note the orientation of this plug and remove it. This will disconnect the green power light.

6. Replace the top metal cover over the circuit board using two Phillips-head screws.

7. Remove the disk drive from the lower plastic case by removing the six screws and lifting it out.

8. Place the disk drive upside down on a flat surface next to your computer. At this point, you should notice the stepper motor and the two screws that hold it in position (Photos 2 and 3). These screws pass through slotted holes in the stepper motor mounting, thereby allowing the stepper motor to be rotated by a small amount when these screws are loosened.

9. Plug the connecting cord from the computer into the disk drive. Plug in the power cord to the disk drive. *Warning:* from this point on, *do not* touch any of the exposed electrical components in the rear of the disk drive. It is all right to touch the power switch to turn the drive off and on, but don't touch anything else back there. It is also all right to touch

Photo 2. Location of stepper motor.

the protective metal case that is built around your disk drive.

If, for any reason, you were to get a shock from your metal case, immediately unplug the disk drive and take it in for professional service—you have a dangerous short circuit and more problems than just misalignment. (I have never heard of this happening, but anything is possible. It is not required in the alignment process to touch any of the electrical devices in the rear of the disk drive, so why take chances? Stay away!)

Alignment Procedure

1. Turn on your disk drive, TV or monitor and your computer. Note that your green power-on light for the disk drive will not work, since it is disconnected.

2. Type in `POKE 53281,1` {return}. Next, hold down the CTRL key and push the 1 key. This will give you black characters on a white screen. (This step is optional, but I like it.)

3. Hold down the shift key and push the CLR/home key. This clears the screen and leaves your cursor in the upper-left corner.

4. Place a disk in the drive. Note that you will have to put the disk upside down (disk notch to the right), since your drive is upside down. Preferably, the disk you select should have a long directory (lots of programs) in order to make it more dif-

Photo 3. Close-up of stepper motor.

ficult for the disk drive to load the directory.

5. You will now begin typing in instructions and a short program that will make life simpler while aligning the disk drive. Do not get ahead of me on this, since any deviation from the following instructions will mean extra typing and work for you.

6. Type in `LOAD "$",8` {return}. The disk drive light will come on and the message Searching For \$ will appear. Next will appear the Loading message or, if your drive is badly out of alignment, you will get the File Not Found message. Then the Ready message will appear, along with the blinking cursor.

In some cases, the disk drive will find the directory (\$) and attempt to load it, unsuccessfully. In this case, your disk drive may "hang up" (your cursor does not come back to the screen). For this condition, turn your computer off, then on again, thereby resetting it, and try a different disk.

7. During the directory load, observe your drive's red light. If it comes on and remains steady, with no flickering or blinking, then proceed to step 9. If it flutters and pauses or if you get the File Not Found message, continue on to step 8.

8. You must get the disk drive sufficiently operational to read the disk directory. First, press the CLR/home key (without the shift key). Your cursor will now be flashing in the upper-left corner, on the "L" of `LOAD"$",8`.

With your Phillips-head screwdriver, *loosen* (not remove) the two screws on the stepper motor (they may be hard to unscrew the first time). It is not necessary to turn off the disk drive or remove the disk during this procedure.

Rotate the stepper motor about $\frac{1}{16}$ of an inch in either direction. Retighten the screws until they are snug. Hit the return key on your computer. The directory will again attempt to load. Repeat step 7.

If the directory still will not load properly, rotate the stepper motor in the other direction and try again. You may have to readjust several times in order to get a good load of the directory. If, no matter where you adjust the stepper motor position within the range of the slotted holes, you cannot get a good directory load, go to the section in this article entitled "Other Troubleshooting Tips."

9. At this point, you should have had a good directory load. This indicates that track 18 is sufficiently in alignment and can be read by the disk drive. This is the easiest track to align and seems to have a wider tolerance for alignment. Tracks 1 and 35 are a little more critical.

Returning to the screen display, after loading the directory, the cursor should be flashing under the Ready message. Do not list the directory! Type in the New command and press the return key. The Ready message will again appear, with the cursor flashing underneath.

10. Next, type in the following short program beneath the latest Ready message, using carriage returns at the end of each program line.

```
10 OPEN 15,8,15:OPEN 5,8,5,"#"
20 PRINT#15;"U1:"5;0;1;1:GOSUB 60
30 PRINT#15;"U1:"5;0;35;1:GOSUB 60
40 CLOSE 5:CLOSE 15
50 END
60 INPUT#15,A;A$;B;C:PRINT A;A$;B;C
70 RETURN
```

Immediately after line 70, type RUN and hit the return key.

11. The short program you have just entered will begin executing and will check to see if block 1 of tracks 1 and 35 are readable. Two messages will appear under your last Run command. If the disk drive is in fairly good alignment, both messages will say 0 OK 0 0 and you can jump to step 14. If not, you will get an error message, such as 21 READ ERROR 1 1 or 27 READ ERROR 35 1 or something similar. The last two numbers in the error message refer to the track and block that was unreadable.

12. If you received an error message in step 11, you must further "tune" your disk-drive alignment. Loosen the two stepper-motor screws and rotate the stepper motor by a

very small amount, in one direction. Retighten the screws.

On your second or third time through this step, you may be rotating the stepper motor by a small amount in the opposite direction. You are looking for that "just right" position and will find it by trial and error.

13. Here is where you are rewarded for following directions. You don't have to type everything in again on the retest. First, push the CLR/home key (do not use shift), then hit the return key. Since your cursor was once again on the "L" of LOAD "\$",8, the directory will begin loading. Once again, observe your red light during the program load, as in step 7. If everything is all right, proceed. Otherwise, readjust the stepper motor in the opposite direction and try again.

After the load, your cursor will be flashing on the "N" of NEW. Hit the return key again. Now your cursor will be blinking on the "1" of program line 10. Press the return key eight more times and your short program will be reentered in the computer and will begin running. You must reenter the program this way, because every time you load in the directory, you write over whatever else might be in the computer's memory. (The format of this screen makes it easy to keep testing the disk drive without a lot of typing.)

Once again, you will get two messages. (The new messages will write over the old ones, but there's no harm in that; if it bothers you, use your cursor controls and the space bar to erase the old messages prior to hitting the CLR/home key.) Repeat steps 11, 12 and 13 as often as necessary, until, by trial and error, you get two messages that say 0 OK 0 0.

14. Basically, you have fiddled with the orientation of the stepper motor until the disk drive loads well enough for you to be able to read both tracks 1 and 35. At this point, your disk drive is in fair, but probably not optimal, alignment. There is one final "supertuning" check for optimal results.

15. As I mentioned earlier, my Safe and Fast Disk Checker program is in last month's *RUN*. Originally, this program was only meant to check for bad sections on your disk. However, in developing this article and the procedures herein, I found that this program was an invaluable alignment tool. In just a few minutes, the S & F

Photo 4. Front-top view of the drive, showing the location of the read/write head and the capstan.

Disk Checker checks every single track and block on the disk, whereas the program in step 10 above checks only the first block of tracks 1 and 35.

The final step in your alignment procedure is to load in the S & F Disk Checker and run it. Since you are working with a disk drive that may not be in perfect alignment, cover the disk's write-protect notch with a piece of tape. If your drive is in perfect alignment, the S & F Disk Checker program will run both quickly and at a uniform rate of speed.

If the rate of checking slows down or falters, or if the disk drive must reset itself, it is not perfectly aligned. Do not turn off your computer or disk drive. After the S & F Disk Checker program stops (or you stop it by hitting the run/stop and restore keys), once again loosen the stepper-motor screws and readjust the stepper motor by rotating it a very tiny amount. Retighten the screws and run the S & F Disk Checker program again.

Continue this final adjustment process until the program runs all the way through without pausing or slowing down. Then run the program with several different disks to make sure that you can read them all. Some of your latest disks may have been formatted when your disk drive was in the process of going out of alignment; these disks may be difficult to read. Salvage what you can from them and put their contents on other disks.

As a final test, I run the S & F Disk Checker program on the test/demo disk that came with my Commodore drive, since I'm fairly sure this disk was prepared on a properly aligned drive.

From my experience, there is only one "perfect-alignment" position for the stepper motor. The disk can still be read if the motor position is slightly to either side of "perfect," but the drive hesitates and pauses. The S & F Disk Checker will help you go from this workable position to the perfect position.

Other Troubleshooting Tips

Photo 4 shows the top of the mechanical portion of the disk drive from the front. Sometimes, no matter what you do with rotating the stepper motor, you are unable to get a directory to load. I know of three possible solutions, and there may be more:

1. Electronic failure. This is beyond the scope of this article. Take your disk drive in for repair.

2. The left arrow in Photo 4 points to a black lever, which is attached to a pressure pad holding the disk against the read/write head after the disk is inserted. If you lift this lever just slightly, you will see the pressure pad and the read/write head underneath. I know of a few cases where this black lever has become stuck while people have been working with the stepper motor. A few jiggles should free it up.

3. The right arrow in Photo 4 points to the cylinder-shaped capstan, which is mounted on the shaft of the stepper motor. The rotation of this capstan, with the motion transferred through a strap and pulley arrangement, is what moves the read/write head over the disk during use.

Directly above this capstan is a small trapezoid-shaped flat plate, which is held in place by one Phillips-

head screw. That flat plate is the stop for the capstan's rotation. This stop occasionally will be knocked askew and must be repositioned. To get at the stop plate and its holding screw, it is necessary to remove the top circuit board. If you try this, remember to have the disk drive unplugged (no power), and remember where all the wires go for reassembly.

Reassembly Instructions

1. Turn off the disk drive and remove all cables from its rear.

2. One helpful hint at this point. I drilled two $\frac{7}{8}$ -inch diameter holes in the bottom of my disk drive's plastic case, so I would never again have to disassemble the drive to get at the adjusting screws for the stepper motor. Now I just turn the disk drive over and begin the realignment, with no disassembly required.

3. Make sure that the stepper-motor screws are *tight!*

4. Place the disk drive in its lower case and install the six screws. I find that the needle-nosed pliers are helpful in placing these screws in their holes.

5. Remove the top metal cover and plug in the green power light. Remember which way the plug faces.

6. Replace the top metal cover.

7. Replace the top plastic cover with the four screws.

8. Reconnect the cables in the back of the disk drive.

I hope you have enjoyed this article and will find it useful.

The Safe and Fast Disk Checker for the Commodore 64 is available from me, in both the original Basic version and in a compiled version (twice as fast). For VIC-20 owners, I have a functional but simplified version, which can also be used in the alignment process.

I will provide all three versions on the same disk, with mailer and postage included, if you'll send me your name, address and \$8.

a Breakthrough in Value! **ULTRABYTE** NEW PRODUCTS - ALL with FREE BACKUP COPIES

ULTRABYTE DISK NIBBLER

Uses proprietary revision of disk operating system (DOS) to make a bit by bit copy. This process, called nibbling, copies the format, data and errors, all at the same time. Errors are not recognized and do not hammer the drive. Built in fast load environment allows copies in 8 minutes with a single 1541 disk drive.

- Easy to use. No separate analysis or error production
- Choose 35, 36, 37 or 38 tracks to copy incl. half tracks
- Makes up to 5 copies of each original — (UNIQUE FEATURE)
- Backs up 99% of all protected software
- Free backup copy - two disks for the price of one

\$39.95 FOR 2 COPIES OF THE
DISK NIBBLER

plus \$4.00 shipping and handling. Mastercard, Visa, Check or M.O.. Foreign orders or COD add \$2.00. Calif. add 6.5% (\$2.60) sales tax. Additional backup copies are \$20.00 plus \$3.00 shipping. ATTENTION: Owners of ULTRACOPY whose names are in our file may order a single copy for \$20.00 plus \$3.00 shipping.

FREE BACKUP DISKS

McMURPHY'S MANSION *New* AN ULTRABYTE TEXT ADVENTURE

It seems that an unknown uncle has died in faraway Scotland and left you his vast fortune. \$10,000,000 to be exact !!

There is only one small problem. Dear old uncle McMurphy was a bit demented and has hidden your inheritance somewhere in his mansion.

He left you only one small clue, a brass key.

It is now up to you to find your fortune.

- 30 - 60 hours of challenge
- Sealed envelope of hints for beginners
- Instruction manual included
- Solution sheet available

➡ **\$29.95** for 2 disks ←
plus \$4.00 shipping. COD or
Foreign add \$2.00. CA tax \$1.95

THE DISK SURGEON *New* AN ULTRABYTE DISK UTILITY

- Read data from, edit and write to disk
- Analyze disk errors without "hammering"
- Write errors 20, 21, 22, 23, 27 & 29 on disk
- Read data under errors, erase errors
- Decimal, HEX, Octal & Binary conversions
- Format a single track with any ID
- Detailed instructions for beginners
- Much more

INCLUDES THREE PUBLIC DOMAIN COPY PROGRAMS THAT ARE NOT PROTECTED

- 1) FILE COPY to copy portions of a disk
- 2) SINGLE TRACK COPY
- 3) 4 MINUTE COPY of entire disk. Protected disks also require error production

➡ **\$29.95** for 2 disks ←
plus \$4.00 shipping. COD or
Foreign add \$2.00. CA tax \$1.95

SPECIAL FEATURE CHARTPAK-64

Now you can make professional quality charts and graphs instantly with our all-time best selling software package. You can choose from up to 8 different chart formats from CHARTPAK-64's easy-to-use selection menu. Your pie, line or bar charts automatically drawn, scaled, labeled and positioned, but you can easily change them to suit your requirements.

CHARTPAK-64 uses the data that you enter and edit from the keyboard or you can transfer data from Multiplan, CalcResult or your own files. You can also chart statistical information since CHARTPAK-64 can do averages, standard deviation, least squares and exponential smoothing. Your charts may be printed in either of two sizes on most dot matrix printers. Includes complete user's handbook. **\$39.95**

CHARTPLOT-1520 excellent charts to be printed on the inexpensive 1520 plotter. **\$39.95**

CHARTPLOT-64 unsurpassed quality charts on most X-Y plotters. **\$84.95**

TAS-64

CHART YOUR OWN STOCKS...

Sophisticated technical analysis charting package for serious investor. Capture data from DJN/RS or Warner Services or enter and edit your data. 7 moving averages, 3 oscillators, trading bands, least squares, 5 volume indicators, relative charts, much more. Two size hardcopy. **\$84.95**

DATAMAT-64

ORGANIZE YOUR DATA...

Powerful, easy-to-use data management package uses menu selections. Free form design: 50 fields/record; 2000 records/disk. Sort on multiple fields in any combination. Complete selection and formatting for printing reports. **\$39.95**

Memory Jogger

Here's the world's simplest database. It makes information retrieval quick and easy.

By *BLAINE JOHNSON, JR.*

Memory Jogger isn't the most complex database around, but it gets the job done. There are only two "working" lines in this program: 20 and 30! The rest is just window dressing. You can use the program for birthdays or anniversaries, for club or church manpower, or for any type of cross reference you wish.

The program is set up for the C-64's 40-line screen, but will run as is on the VIC-20 (just leave out the first line, which sets the screen background and letter colors). Actually, it should run on any machine that uses the Get and If... Then commands.

My program is set up for hams (amateur radio operators). If I hear someone on the radio and can't recall his name, I wait for him to identify, then type the first letter of his suffix, and, *voilà!*—I get a listing of his name, telephone number and any other pertinent information I had included about him. Also, if I am talking to a ham and forget his call, I type the first letter of his name and get the same information.

If you would like to build a program for your church group, to jog your memory as to which members

are handy at what, you might start your lines like this:

```
101 IFH$="E"ORH$="J"THEN
    PRINT"555-1234*HARRY JOHNSON*
    ELECTRICIAN*101
102 IFH$="P"ORH$="B"THENPRINT
    "889-9876*JOE BROWN*PLUMBER*102
103 IFH$="E"ORH$="T"THEN
    PRINT"544-1212*BILL THOMPSON*
    ELECTRICIAN*103
```

For birthdays or other special dates, you might use this format:

```
101 IFH$="M"ORH$="H"THENPRINT
    "1/5/55*MARY*(HENRY'S GRAND-
    DAUGHTER)*101
102 IFH$="B"ORH$="J"THENPRINT
    "6/22/48*BOBBY*(JANE'S OLDEST
    BOY)*102
```

Helpful Hints

A few helpful hints:

- Don't leave any spaces (your Commodore will put them in where they're necessary).
- Use abbreviations at all times (T {shift}H for THEN and ? for PRINT).
- Don't use the ending quotation marks (the return key takes care of that).
- Always include the line number at

the end of your Data statement. That way, the line number will print out on the screen, making it easier to make corrections later, should your facts change.

Line 31 will clear your screen. (Without it, as you continue to use the program, the screen will fill and begin to scroll.) Type my program, including the REM lines, so you will know what to expect. Starting at line 101, type in your own information. By including the REM statements, you won't have to refer to the magazine to remember how to make changes and additions.

Lines 11 and 12 both contain 40 equals signs (=) to match the C-64's 40-column screen. Note that these lines should be shortened, and the title in line 10 should be shifted left for the VIC-20. Memory requirements will depend upon how long and inclusive a cross-reference program you wish to make. ®

Address all author correspondence to Blaine Johnson, Jr., Rt. 2, #5 Shoo Fly Circle, Ridgeville, SC 29472.

RUN It Right

To enter The Great RUNaway, all you have to do is fill out the attached coupon or a facsimile, and send it in to arrive before August 31, 1985, and you are officially entered. That's it. Enter as many times as you wish. Just send each entry in a separate envelope. Of course, there can be only one prize awarded per household and all entries must be received before August 31, 1985. The odds of winning a prize will depend on the number of entries received.

Taxes and duties on all prizes are the sole responsibility of the winners. No substitutions will be made for any of the prizes.

All prizes will be awarded. In the event that all prizes are not claimed, random drawings will be held from all entries received to award unclaimed prizes. All federal, state and local laws apply. Void wherever prohibited by law. Open to residents of U.S., its possessions, Canada and Mexico.

All winners will be notified by phone and mail. Anyone of any age may enter, but prizes won by a minor must be claimed by parent or legal guardian. A complete list of winners will be published in *RUN* magazine. Employees of CW Communications, Inc., its affiliates, subsidiaries, advertising and promotion agencies and the families of each are not eligible to enter. Entry constitutes permission to use winners' names, photographs, or other likenesses for promotional purposes without further compensation to the winners. Winners will be selected in a random drawing held on Tuesday, September 3, 1985.

RUN Magazine will not be responsible for lost, misdirected or late mail.

Summertime ReRUN Where The Programming Is Easy

1985 Summer Edition

Summer is hot enough without the added stress that comes from do-it-yourself programming.

This year, *programming can be a breeze!* Let the new ReRUN give you great ready-to-load programs for the Commodore 64 and Plus/4*.

You'll get the best and most recent programs listed in RUN...this summer, and then every three months. That's right ReRUN's gone quarterly!

Every quality cassette or disk will contain approximately 10 outstanding programs for home, business, or school. Your sensational summer of programming begins with a RUN super special—a complete terminal program for telecommunications!

For summer fun, you'll learn how to add "zaps" and "poings" to your programs with "Sound Effects", while "Biorhythms Chart" lets you explore the ups and downs of your life.

Plus, you'll benefit from the financial organization assistance offered in "Money Manager" (runs on C-64, Plus/4, and 16).

Your summer edition comes with a complete booklet of documentation and loading instructions. The hard work has already been done. All you do is load, run, and enjoy!

Order your Summer ReRUN on cassette for just \$11.47, ** or on disk for just \$21.47. Simply return the coupon or attached order card today, or call TOLL FREE 1-800-258-5473. In NH, dial 1-924-9471.

It can be the beginning of a summer filled with enjoyable and relaxing programming!

Plus/4 programs are contained on the C-64 loader.
The ReRUN Summer Edition programs available on cassette and disk for the C-64 only.
Available in June. Disks contain more programs than cassettes.

*Commodore-64, Plus/4, and 16 are registered trademarks of Commodore Business Machines, Inc.

**Prices include postage and handling.

The Handicapper

Use your **Commodore 64** to improve your performance at the track! These fine programs for **Thoroughbreds, Harness Horses** and **Greyhounds** combine the power of your computer with the savvy of a veteran handicapper. Spend a few minutes entering data, and The Handicapper will rank the horses or dogs in each race. All the information you need is readily available from the Thoroughbred Racing Form, harness or greyhound track program. We even provide a diagram that shows you where to find it!

Horse racing factors include speed, class, past performance, post position, stretch gain, beaten favorite, jockey or driver's record, weight (for thoroughbreds) and parked-out signs (for trotters). **Greyhound factors** include speed, past performance, class, favorite box, kennel record, breaking tendencies, beaten favorite.

Instructions and wagering guide included. **Thoroughbred, Harness or Greyhound Handicapper**, only \$34.95 each on tape or disk. Any two, just \$54.95. All three only \$74.95.

PROGRAM ENHANCEMENTS

From time to time, RUN publishes interesting reader additions or modifications to programs that have appeared in previous issues.

VIC-20 Datafile Enhancement

If you own a 40-column expanded VIC-20, the Datafile programs published in the November and December 1984 issues (p. 74 and p. 80, respectively) will run without any problems if you make two minor changes in lines 12 and 22 of the original program.

The changes are as follows:

```
12 POKE 36879,X:PRINT"CHR$(X)":  
GOSUB16:IFX=0 THEN GOTO 66
```

Change the X in the Poke and Print statements to whatever color codes you wish.

```
22 MEM=X:EN=0:EM$=D$:ET=0:ES=0:  
A1$=D$:A2$=D$:A#$=D$:RETURN
```

Change the X in the MEM statement to the amount of memory available after loading the program.

Dennis R. Paquette
5748 Gross Drive
Dayton, OH 45431

Gemini10 Printer Enhancements

The Lister-Filter program (p. 82, September 1984) is one of the best you have yet published. The best feature is the part of the listing (lines 1010-1350) that allows you to customize the program to your Gemini10 printer.

On the Gemini printer, the code for the pi sign is CHR\$(187). To produce this sign, insert the following line:

```
1347 C=187:C$=CHR$(187):GOSUB4000
```

To produce the pound sign (£), substitute 195 for 187. To produce the up and left-arrow characters, substitute 164 and 166, respectively.

To change square brackets ([,]) to curly brackets ({, }), change the 93 in line 5140 to 125 and the 91 in line 5280 to 123. (Don't forget to change the checksum—the last number in the line—by adding the difference between each of these pairs of numbers.)

Another modification allows you to end the program and recall it, instead of reloading it, as the article suggests. Add lines 153, 6000 and 6010 to the program listing.

```
153 FORQZ=700TO723:READA:  
POKEQZ,A:NEXTQZ  
6000 DATA165,55,141,38,3,169,157,  
141,39,3,96,165,56,169,202,141,38,3,  
169,241  
6010 DATA141,39,3,96
```

Now you can end the Lister-Filter program by typing SYS 713 or recall it by typing SYS 700 and then pressing the run/stop and restore keys.

Circle 304 on Reader Service card

you could be the one to WIN \$5000 by playing the exciting game of MAD SCIENTIST 64

MAD SCIENTIST 64 is a disk based educational game for the Commodore 64tm. Actually a game within a game—you advance by solving "game clues". Along the way, you receive "solution clues" based on U.S. history & current events. Very interactive like the Adventure & Infocom games.

To promote this game, we are offering five cash prizes to the best registered game players: a Grand Prize of \$5000 and four separate second place prizes of \$2500 each. Entrants will be divided into 5 equal groups by postal zip. The Grand Prize will go to the best overall score. The highest score in the other 4 groups receive the second place prizes.

All prizes will be awarded. You must return an answer sheet. Provisions for breaking ties. Extensive protection against cheating. 15 day money back guarantee.

Game shipments begin Jun 15, 1985. Answer sheets must be received by us no later than Nov 15, 1985. Winners will be announced on Dec 20, 1985.

Only U.S. entrants are eligible for the cash prizes, & in the U.S., the cash prize is void where prohibited by law.

To receive your MAD SCIENTIST 64 game disk, manual, blank scoresheet, and registration send \$24.95 plus \$2.00 shipping & handling to:

Database Management On the C-64

By BOB GUERRA

So, you've decided to buy a database program. Well, before you start worrying about which package is right for you, the first question you should ask yourself is, "Do I really need one?"

If all you want is to keep a small list of the people you send Christmas cards to every year, then the answer is probably no. Short lists can be kept perfectly well in address books or on index cards. If, on the other hand, you need to keep track of a large body of information that has to be searched, sorted and updated frequently, then a database is one of the most valuable pieces of software you can own.

More than an Electronic File Cabinet

Although databases are often compared to file cabinets, with each record stored on your data disk corresponding to a page or folder in a file drawer, this analogy tends to underemphasize the usefulness of special database features, such as multiple-field sorting and automatic tabulation of numeric fields.

Furthermore, while large mailing lists, catalogued with a database, can be easily sorted and printed on individual mailing labels, you'd be hard pressed to get a shoebox full of 3" x 5" cards to be so cooperative. The idea of a database being an electronic substitute for a file cabinet is a bit like describing an advanced word processing system as an electronic pencil.

This isn't to say that a good database will solve all of your record-keeping problems or instantly create order out of chaos. Technology has a long way to go before we see a database system that boots itself and updates your files

■
*Who needs a database?
Maybe you. These powerful
productivity tools can help
you put your business (or
your life) in order, and
there's a package available
to fit every need and budget.*

■

every time you arrive home with a new stamp for your collection or meet someone you feel compelled to add to your address file.

Assess Your Needs

Although most people purchase database programs to create computerized address lists or to keep track of a growing collection (coins, books, records, stamps, etc.), the number of possible applications for databases is virtually limitless. Likewise, although all database programs function similarly, a tremendous variety of database programs is available to fit all needs and budgets.

At the low end, about \$30 will buy you a no-frills program that will allow you to maintain small files in pre-designed formats and perform simple searches and sorts with basic printing functions. Such a system may be all you need to help you organize your personal records or catalogue your favorite collection.

A small business, on the other hand, may need to spend around \$100 for a state-of-the-art information management system that will allow it to create large files, perform

extensive numeric calculations, design and print custom reports and, finally, protect valuable data by establishing security levels that limit access to functions and information to holders of specific passwords.

Since database systems vary so much in both price and available features, the first order of business is to assess your needs. Once you've decided the types of files you want to create and the ways in which you want to control your information, you can then select a database system that will handle your record-keeping needs without providing unnecessary features you'll never use.

The Home Cataloger

The Home Cataloger is a moderately-priced database with some useful features, including automatic totaling of numeric fields, multiple-field searches and sorts and one-key command entry. Perhaps the best feature, especially for first-time users, is the inclusion of ten pre-designed record formats that can be copied onto your data disk and used immediately. These database templates are designed to help you keep track of such things as coin collections, books, home inventory and travel expenses, to name a few.

If none of the available templates meets your record-keeping needs, or if you want to create a totally new format unlike any of those provided, it's a simple matter to create your own custom-designed format using one of the templates as a starting point. It is also easy to create report formats to your exact specifications for printing.

The Home Cataloger is not with-

out a few limitations, however. For example, although you can search your files for specific matches in one field or several, you cannot use conditional statements as matching criteria. This means that, while you can search your coin collection file for every coin struck in 1956, there's no way to search for all coins minted between 1920 and 1930. Only specific information within a field can be used as match criteria.

Other potential problems include limited storage capacity (see chart) and the rigid ten-field screen format to which all files must conform. If you have no real need for conditional matching or free-form file design and don't mind dividing files containing over 750 records among two or more data disks, then The Home Cataloger is an easy-to-operate alternative to some of the more advanced databases. (*Arrays Inc./Continental Software, 11223 S. Hindry Ave., Los Angeles, CA 90045.*)

Database 64

Database 64 is easy to operate, interfaces with some popular word processors (WordPro 3 Plus/64, PaperClip and others) and comes with a clearly written, though not particularly fancy, instruction booklet.

The program even allows you to search your file for information that falls within a specified range (such as all recipes with cooking times between 45 minutes and an hour). In fact, except for one major flaw, Database 64 would be a good choice for first-time users or people who need to keep simple files and don't require a lot of advanced features.

The problem, however, is cost. At \$59.95, Database 64 is simply overpriced. Compared to other database systems reviewed here, Database 64 is between \$10 and \$20 more expensive than comparable packages from other manufacturers. This is unfortunate because, as a no-frills package, this program has a lot going for it.

In addition to features already mentioned, Database 64 lets you search using only partial information as match criteria (wildcard search). Using this option, you can look for a name in an address file, even if you've forgotten the exact spelling, simply by entering as many characters as you can recall, followed by @.

Database 64 even lets you create custom label and report formats that you can save on your data disk. Be warned, however. You can probably

find the same features in a less expensive program and use the difference to buy some blank disks. (*Entech Software, PO Box 881, Sun Valley, CA 91353.*)

Pro-Data

Like Database 64, Nanosec's Pro-Data isn't packed with special features. It is an attractive program, however, that encourages users to create unique screen formats with few restrictions.

Rather than being locked into a rigid format, you are allowed to roam freely around the format screen, creating fields of up to 80 characters wherever you want. In addition, all C-64 graphics symbols can be used to draw boxes around specific sections of your form for emphasis or just to make the file format more attractive.

The only problem with using graphics characters in your screen formats is that if you only have a letter-quality printer, you will get some odd characters generated in place of graphics symbols when you use the built-in Screen Print function. Fortunately, flawless labels and reports can be produced no matter what type of compatible printer you own.

Pro-Data is a reasonably priced program that can handle basic record-keeping tasks in the home. The loose-leaf manual is well organized, and beginners should have no problems in following the step-by-step instructions.

Despite Pro-Data's user-friendliness, however, it is hard to call it a true database-management system because of its severely limited sorting ability. Although you can restrict lists by specifying a range for a particular field, there are no provisions for either alphabetizing lists or putting them in numeric order. Without these basic features, Pro-Data is simply an interesting but incomplete piece of software with limited potential. (*Nanosec Corp. Lincoln Plaza, 3544 Lincoln Ave., Ogden, UT 84401.*)

Datamat 64

When releasing a new product, most companies examine the competition and price their product accordingly. Fortunately for us, Abacus didn't. Any other software company might charge at least \$20 more for a database as good as Datamat 64.

With the exception of extensive calculating functions and the ability to limit data access to password

holders, Datamat 64 does everything some of the more expensive databases do, and it actually outshines a few costing 30% more.

For starters, Datamat is easy to use. Simply highlight the desired menu item by pressing the space bar or cursor key and hit the return key to select. Next, the free-form format design lets you create files that look the way you want them to.

Even the task of entering records into the file is made less tedious. Instead of returning you to a blank form for each new record, Datamat retains the information from the last entry, so that when several records share information in specific fields, those fields can be skipped after the first record in the series has been entered.

Everything about Datamat 64, from its large file capacity and acceptance of conditional search criteria to its easy-to-follow user's manual and free customer-support line, makes it the perfect database for most home applications. If you can find a copy, grab it before Abacus realizes its mistake and raises the price! (*Abacus Software, PO Box 7211, Grand Rapids, MI 49510.*)

Busidata and Flex File

Both Busidata, from Skyles Electric works, and Flex File, from Cardinal Software, are powerful databases originally designed by Michael Riley.

The two programs are virtually identical. Both allow you to create files with up to 20 fields per record and up to 70 characters per field. Files created with either program can be searched quickly for any record or group of records by specifying the information to be found in special, pre-designated key fields. As new records are entered using the Direct File Maintenance portion of the program, they are automatically sorted according to the key field you've chosen.

In addition, you can select from a menu of conditional statements to narrow your searches down to very specific groups of records. Some available conditionals include Greater Than and Less Than, Equals and Not Equal To (used on numeric fields), Precedes and Follows (alphabetically) and Pattern Matches.

Both programs let you design custom-label and report formats and allow you to perform extensive calculations to create special reports with several levels of subtotals, or directly within the files themselves.

This Ad Prepared MAY 1985

Finally, both can be used with some word processors to produce form letters and other useful documents.

So, which of the two programs should you buy? Busidata. The manual, though largely the same as Flex File's, uses larger print, making it easier to read. Also, Busidata has been compiled by Skyles, so that some portions may run faster. Finally, Busidata costs \$10 less than Flex File, and when two programs are so close in features, I'd pocket the sawbuck any day. (Skyles Electric Works, 231 E. South Whisman Road, Mountain View, CA 94041 and Cardinal Software, 13646 Jefferson Davis Highway, Woodbridge, VA 22191.)

Data Manager 2

At first glance, Timeworks' Data Manager 2 seems like just another inexpensive database system with a few handy features. It allows you to search and sort your files on several fields; confidential files can be protected with passwords of up to eight characters; and other Timeworks programs, such as Word Writer and SwiftCalc, can be interfaced with Data Manager 2 to create customized reports using information from all three. Where Data Manager 2 really

shines, however, is in its ability to provide you with an instant statistical analysis of your files.

Let's say, for example, that you know what every stamp in your collection is worth, but you'd like some information about the value of the whole collection. As long as you've created a record for each stamp with a field for current value, you can simply use the statistical analysis option to give you a mini-report containing the total value of your collection, the average value of your stamps, the value of your most and least valuable stamps and the standard deviation as well.

In addition, by requesting the Frequency Bar Charts option, you'll be treated to a full-color graphics display of the statistical breakdown. Even if you have trouble using a calculator to find a percentage, Data Manager 2's statistical analysis options will let you generate impressive stats on every file you create. (Timeworks, Inc., 444 Lake Cook Road, Deerfield, IL 60015.)

Compufile

If nothing else, ABS Software's Compufile wins the award for the

least expensive program of the group. At \$29.95 retail, however, don't expect a lot of "bells and whistles"—it's just a bare-bones data-management program with most of the basics and little else.

A brief perusal of the 50-page user's manual will tell you everything there is to know about Compufile. The first thing you may notice is that there are no instructions for creating a data disk. That's because you may store your records directly on the program disk.

If you want to set up a separate data disk to allow larger files, the current version of Compufile (1.34) includes a Utilities menu that lets you easily format new data disks, erase files, display a directory of your databases, or change to another disk.

No matter where you decide to store your files, you can create a new database for your records, or use one of Compufile's four built-in database templates. These include Mail List, Card Catalog, Coin Collection and Inventory. Before you create a large mailing-list file, however, you should be aware that Compufile has no specific option for printing mailing labels.

Compufile may not be as fast or as

Circle 219 on Reader Service card.

CBUS™

THE CARTRIDGE BACKUP SYSTEM FOR THE COMMODORE 64®

The SOLUTION to all of your cartridge problems is the Cartridge Back-Up System (CBUS) for the Commodore 64.

The **CARTRIDGE BACK-UP SYSTEM (CBUS)** consists of two hardware components and very friendly software on a diskette.

The two hardware components are:

1. **CBUS-I** — the "SNAPSHOTTER" that takes electronic pictures of cartridge software and stores them on disk. Our **CBUS "AUTOSAVER"** permits anyone to do this automatically.
2. **CBUS-II** — is a true cartridge emulator. The unique **CBUS-II** (patent pending) permits you to run all standard cartridge software stored on disk by use of **CBUS-I** or equal.

A **CBUS SOURCE DISK** is provided. This contains very friendly software. The **CBUS AUTOSAVER** permits anyone to automatically copy cartridge software to disk and also updates the Directory. The cartridge software (on disk) can be selected from the **CBUS** menu using the keyboard or joystick. Programming knowledge is NOT required, however, a comprehensive set of manuals are provided for those who want to know how it works.

CBUS is the only system which permits the storing of ALL standard cartridge software designed for the Commodore 64 on disk and running software from disk. **CBUS** does NOT "crack" the software. The unique **CBUS-II** can emulate all of the standard cartridges, thus the software runs the same as in the original cartridge.

CBUS \$119.95
(Includes CBUS-I, CBUS-II and CBUS SOURCE DISK)
Additional CBUS-II's are available for \$ 84.95

MUSIC POWER! PLAY AN ENTIRE SONATA!

VIRTUOSO

A complete, 100% machine-language music program for the Commodore 64.

"Professional...awesome"—Stan Jones, Fairbanks News-Miner

Create, edit and play music in 3 voices. Plays long pieces, up to 40 minutes or 40 pages of sheet music! Music comes alive as notes and keys change color as they are played. 5-1/2 octaves on screen, 8 octave audio range. Choose any of five instruments for each voice, or create your own instrument with VIRTUOSO's synthesizer. Play any portion at any speed. Use sixteenth note triplets, ties, legato/staccato, repeats, etc. Continuously change dynamics (loudness) and tempo. Several pieces of classical and popular music included. Full-screen editing of music code, and more!

VIRTUOSO comes on disk with a 33-page manual. Color monitor recommended. VIRTUOSO: \$39.95. VIRTUOSO+: \$45, prints music scores on Epson and Star Micronics printers having dual density graphics.

BETTER KEYBOARD UTILITY.

A simply elegant solution—blank " Cheat Sheets" give you the keyboard commands you need, instantly, for any program.

You've got the best personal computer in the world and lots of software to run on it. But unless you work with each of these programs every day, how do you keep the commands straight? "CS" in one program means something else in another. Our solution? Simple. A pack of 12 cards die cut to fit your keyboard. Ready for YOU TO FILL IN. Have all of your program commands right where you want them. . . on your keyboard. Order a couple of packs today.

\$12.95 set of 12 custom die cut sheets \$19.95 set of 24 custom die cut sheets

BETTER DUST PROTECTION FOR VIC & COMMODORE

Choose an attractive static-free cover for your keyboard, monitor or complete system.

Don't confuse these attractive covers with cheap static-filled clear plastic covers. These deluxe covers are custom-fitted to each element of your Commodore, and are sewn, not glued. The interior of the supple leather-like material is lined with a special soft fabric liner to prevent scratching. Soft camel color fits beautifully in any office or home. Available: computer cover (\$9.95), monitor cover (\$12.95), 1541 disk drive cover (\$8.95), dataset cover (\$7.95). Printer covers (specify type) \$12.95.

\$7.95 to \$12.95

We Can Solve All Your Commodore Color Problems

Unique Problem Solvers for Older Commodores (with 5 Pin Monitor Din Plug).

- The Interference Stopper** . . . A new kit that installs in minutes with two simple solder connections. Best results when combined with items below. Absolutely stops 90% of the RF interference. **\$15.95**
- The Color Sharpener** . . . Use if your "old 64" is hooked up to a TV. Just plug into the monitor plug, and the color and contrast immediately improve. Dramatically crisp letters. Great graphics. **\$18.95**
- The NEW Color Sharpener CABLE** . . . Use if your "old 64" is hooked up to a monitor. A new 2 prong cable, with a Color Sharpener built in for your monitor. **\$24.95**
- The Monitor "Improver"** . . . If you have a Commodore 1701 monitor, this cable (3 prong) gives you a picture you won't believe. Better than the cable Commodore built. (Also hooks your "old 64" to the 1702.) **\$24.95**

RESET SWITCHES 2 Versions for Every Need

At last, the "needed" switch for Vic-20 and Commodore. Commodore left out a reset switch. Our switches will return control to you every time.

Version 1—Install it Yourself! Requires two simple solder connections, and drill a small hole. Works great. Saves money. A steal at **\$9.95**

Version 2—Use in any Commodore Application. A special buffered flow-thru version, that plugs in, gives a "Y" connection that provides your computer with another serial port and a reset switch. The ultimate in versatility, convenience and simple installation. No soldering. Introductory priced at **\$19.95**

Is Your Commodore Disk Drive Hot and Bothered?

Most of them are, you know. They suffer from read and write problems frequently. We've been told that most of these problems occur because the drive has overheated, throwing the head out of alignment.

Our inexpensive muffin fan sits on top of the disk drive and blows cooling air through it.

We went one step further. We built a surge protector into a second fan model.

Fan with Surge protector **\$79.95** Muffin fan **\$54.95**

powerful as some of the more expensive databases, but if you want a program that you can boot and use immediately without first wading through a user's manual the size of *War and Peace*, then Compufile may be a good buy. ((ABS)olute Software, 1780 Austin Highway, San Antonio, TX 78218.)

The Consultant

Not only does The Consultant allow you to create the largest records of any database management system reviewed here (up to nine screen pages with 877 characters each), but the program also features six well-designed templates to keep track of home inventory, mailing lists, recipes, auto expenses, computer software and your favorite books.

Other features include extensive calculations for manipulating the contents of numeric fields, and seven support programs, including File Fix (which lets you repair files damaged due to disk errors), Backup 64 (used to copy data disks) and Supersort (a special program that lets you sort extremely large files).

What sets The Consultant apart from some of the other programs in its price range (\$99.95) is that it lets you establish a number of security levels to protect the information in your files. You can assign one password to users who are allowed to view only certain fields, another to those who may view or print all fields, but aren't allowed to alter the files in any way, and a master code password that you may keep for yourself or pass along to anyone you wish to have total access to all fields and functions.

Although the use of multiple security levels has conventionally been associated with the protection of business data, it's nice to know that, with The Consultant, you'll be able to keep your secret cookie recipes as safe as your tax records. (*Batteries Included*, 30 Mural St., Richmond Hill, Ontario L4B 1B5 Canada.)

Superbase

What would you say about a database management system that does everything you'd expect a premium-priced program to do, plus a few things you never even dreamed possible? You'd probably say it must be complicated to learn and that you don't want to spend the next month trying to make sense of the manual.

Fortunately, Superbase is not only

one of the fastest and most powerful database programs available for your C-64, but its audio learning cassette and beautifully-organized user's manual make it one of the easiest to operate as well. By listening to the instructional tape while following along in the manual, you will be able to create files and start getting your records in order the first time you boot the disk.

Admittedly, the Superbase user's manual is a lot to read through in one sitting, but it is organized so all the basic functions you need to know to get started are in the first tutorial, with advanced features described in detail later on. To make Superbase even easier to use, there's a reference section immediately following the manual's three tutorials that succinctly summarizes all menus, options, commands and functions.

Some of Superbase's superb features include special date fields that automatically fill in the day of the week for any date entered, a built-in calculator, individual help screens, memo screens to remind you of upcoming appointments, and, finally, "batch" calculations that allow you to modify every record in your file by keying in a calculation just once. You can, for example, use this last option to lower the price of every item in an inventory file by 10%.

Finally, Superbase comes with its own program editor and database programming language, which can be used to design powerful applications programs for controlling complex sequences of Superbase operations. Even without the programming options, Superbase has enough going for it to make it one of the best database packages you can buy. (*Precision Software, Inc., 3003 Summer St., Stamford, CT 06905.*)

Database Manager

Since its creation in 1983, Mirage Concepts' Database Manager has maintained an excellent reputation as a program with the power and speed needed for a small business, as well as the flexibility and ease of use required to make it a hit in the home. The original Database Manager (see *RUN*, May 1984) retailed for \$89.95, and although the program allowed you to print forms, lists, labels and reports, the Advanced Report Generator was an optional program costing \$49.95. Currently, both programs have been

combined onto one disk and the price has been set at a reasonable \$99.95, representing a savings of \$40.

The new Database Manager package even contains a data backup program. Lack of such a program was one of the only faults that many reviewers could find with the earlier version. It's also an indication that Mirage listens to users and will continue to make their programs among the best available.

If you're unfamiliar with Database Manager, let me quickly assure you that it is a full-featured program that allows you easily to create virtually any type of file and to search, sort, update, calculate, merge and print those files in a variety of ways to suit almost any purpose. Except for a few inconsistencies, the manual is a pleasure to use and leaves no questions unanswered. (*Mirage Concepts, 4055 W. Shaw, Suite 108, Fresno, CA 93711.*)

Recommendations

So what's the best database available for you and your C-64?

- If you want a top-of-the-line database system that does it all and then some, I'd go with Superbase, although Database Manager is certainly a close second.
- If you've got secrets you want to protect while still allowing other users to access your files, then The Consultant is your best bet.
- If you want a good database at a bargain-basement price, then run to the nearest store and grab a copy of Datamat 64.
- If you feel that you need a database program just to help you keep track of all the available database programs, you're not alone. ®

TEDMON: The Plus/4's Machine Language Monitor

By JIM GRUBBS

This article shows you how to access TEDMON and introduces you to its commands.

When the Plus/4 comes out of the box, it is ready to do several things. You need only plug in the power supply and connect it to a TV set or monitor. Several pieces of built-in software put you in business almost immediately.

To the first-time user, the most mysterious piece of software in the Plus/4 is probably TEDMON, which gets its name from the Text Editor Device chip contained in the Plus/4. MON is short for monitor, a term that refers to a software package used when programming in machine language.

A monitor program gives you direct access to the computer's memory. This is helpful if you want to enter bytes of data into a specific memory location or retrieve those bytes from memory.

With TEDMON you can check the contents of any section of the Plus/4's memory and modify the data that is held there. Or, if you are an adept programmer, you can write entire machine language programs directly in memory without the aid of an assembler.

It's not my intention to make a machine language programmer out of you. I think, though, that you will have fun using TEDMON to discover some

things about your new computer. This article leads you on a treasure hunt to see what you can find.

Looking at Memory

Activating TEDMON is almost as simple as turning on the computer. Once the power-up message appears on your screen, type MONITOR and press the return key. You will see the following:

```

PC SR AC XR YR SP
: 2007 00 01 00 00 F8

```

What you see are the contents of the memory registers that have been reserved for the processor chip in your computer. This is the same display you will get if you now type "R."

Everything your computer does comes through one or more of these registers at some time or another. For browsers, this isn't too important, except to make you realize just how simple things get when you think in terms of one machine language program instruction at a time.

The very first command you want to look at is the M, or Memory, command. Type M 0000, press the return key and look at your screen. The display, of which Figure 1 approximates a sample portion, consists of the con-

tents of the first 96 memory locations in your Plus/4. The reverse-video section contains alphanumeric and graphics characters.

There may be some very funny-looking numbers here. What's an FA or a 0F? Remember, all you are doing here is snooping around, so don't let these strange numbers bother you.

What you have just run into are hexadecimal numbers. In the decimal system we use every day, we have ten different symbols, 0 through 9. In hexadecimal, we work with 16 different symbols. The first ten, 0 through 9, are the same and have the same value as they do in the decimal system. The letters A-F stand for the decimal numbers 10-15.

Learning to converse in hexadecimal is a requirement for doing any serious programming, but don't despair—most of what you are going to do won't depend on it.

In fact, Basic 3.5 includes a function called DEC. When you are in Basic, typing PRINT DEC("XX"), where XX is the hexadecimal number, will return the decimal value of that number! Unfortunately, this does not work in TEDMON.

Next to the displayed memory lo-

```

>0000 0F 0A 00 00 00 00 00 22 :
>0008 22 00 00 FA 00 00 00 00 : Reverse Video
>0010 00 00 00 04 00 20 19 16 :

```

Figure 1. A sample of what your screen should display after you type M 0000 while using TEDMON.

```

>818E 45 4E C4 46 4F D2 4E 45 : ENDFORNE
>8196 58 D4 44 41 54 C1 49 4E : XTDATAIN
>819E 50 55 54 A3 49 4E 50 55 : PUT#INPU
>81A6 D4 44 49 CD 52 45 41 C4 : TDIMREAD

```

Figure 2. By using the Memory (M) display command, you can locate your computer's Basic keyword list, part of which is shown above.

cations is a block of reverse video. We will make use of this feature to go treasure hunting.

Type M 0000 FFFF and press the return key. Rows of numbers will start running by you fairly quickly. Keep your eyes focused on the numbers and letters in the reverse-video section. If you want to slow the display slightly, hold down the Commodore key. If you want to stop the display completely, press the run/stop key.

You are searching every memory location in your Plus/4, so it will take a few minutes to get through them all. If you want to do the search in a somewhat more controlled fashion, start by typing M 0000. When the display stops, simply type M again. Continue in this fashion as long as you wish.

Do you see anything interesting as the display scrolls by? In the reverse-video section, you should see the letters CBM appear several times. In fact, all of your Basic keywords will appear. Figure 2 is an example of some of the things you will find. If you're quick, you may even find some etched-in silicon names and initials! More on that in a moment.

The reverse-video section of the screen pretends the value stored in this memory location is an ASCII character. Then, when the memory in your computer contains the numeric equivalent of CBM, those char-

acters will show up displayed in the reverse-video section.

The Plus/4 uses a unique memory arrangement that allows more user-available memory by being able to tell the difference between read-only memory (ROM) and random-access memory (RAM).

Use the M command to view hexadecimal location 7F8 by typing M 7F8. Normally, this location contains a 0, which means that for addresses 8000 (hexadecimal) and above, the ROM that contains the Basic language and the Kernal routines will be displayed by TEDMON.

By changing the value in this location to a hexadecimal 80, you can view the RAM at the same addresses. To make the change, simply display location 7F8 and then move the cursor over the value (in this case, 00). Type 80 right over the top of this value and press the return key.

You have just done the equivalent of a Basic Poke and changed the value stored in this location! If you are curious, try changing the value and type M 8000 FFFF. What you will find is a lot of garbage, since you don't have a program stored in this range. Before continuing, be sure to return location 7F8 to 0.

More Commands

This random hunting is fun, but there is a more controlled way to find

particular items. For example, let's use the Hunt command to see if a guy named Fred happened to work on this computer.

By typing H for Hunt and specifying the beginning and ending addresses, you can look for the name Fred. If you are looking for an alphabetic string, you must preface the string with a single quote like this:

```
H 0000 FFFF 'FRED {return}
```

TEDMON will now search all the way from 0 to the top of memory, looking for a match. You will notice that several addresses will appear as it searches. You can ignore the first two; they are the addresses in which TEDMON itself stored the search string. The last one is the one you care about.

It turns out that "FRED" appears at BC20. Now try the M command again and see what you find. Type M BC20 and hit the return key. You'll see that not only Fred B., but also Terry R. and Mike I. have engraved their names forever in your computer!

At this point, you might want to try a little experiment. Exit TEDMON by typing X and pressing the return key. This will return you to Basic. Either load or type in a simple Basic program with some Print statements in it. I used the following:

```

10 PRINT "NOW IS THE TIME FOR ALL
GOOD MEN TO COME TO THE AID
OF THEIR COUNTRY"
20 PRINT "THE QUICK BROWN FOX
JUMPED OVER THE LAZY DOG'S
BACK 1234567890"

```

After you have done that, type MONITOR to reenter TEDMON. Try the Hunt command and see if you can track down your Print statements. In my case, I typed H 0000 FFFF 'NOW. Actually, you will find your whole program there, but the Basic commands have been abbreviated, or tokenized, and aren't easily recognizable.

Exit TEDMON again. (Type X and press the return key.) Try listing your program. It should still be there. Now type NEW and list the program. It should be gone... or so it would seem.

Type MONITOR again to reenter TEDMON. Try a memory display where you last found your program. Now you see that it's still there.

What happens is that when you issue the New command, the only things that change are the memory pointers. Memory is not erased. See for yourself how easy that is to prove with TEDMON!

Everything that comes preprogrammed in a computer is programmed in machine language. These programs exist on ROM chips. Using the TEDMON disassemble function, something closer to plain language can be made of those strange-looking hexadecimal numbers. Try typing D FFD0.

What should appear on the screen are a number of three-letter machine language instructions. LDA, JSR and JMP are some common ones. To the right of these instructions, a hexadecimal number may appear. Understanding the full meaning of this notation requires delving into machine language much further than we want to do right now.

Be content to know that if disassembled code shows something like JSR F043, it is saying, "jump to the subroutine that lives at location F043." It's a bit like the Gosub command in Basic.

We've looked at about half of TEDMON's commands. It is also possible to load a program from tape or disk directly from TEDMON. If the name of the program is "TEST," you could load it from disk using

L "TEST",08

From cassette, you would type

L "TEST",01

The Save command works the same way. That is,

S "TEST",08,0400,0BFF

saves everything from memory location 0400 to 0BFF into a program disk file called TEST.

The Verify command works just the way it does in Basic.

V "TEST",08

would verify the disk file against memory.

For creating programs, the assembler is a very powerful tool. There are also several additional commands that are helpful to programmers.

For now, it's time to tiptoe quietly away from TEDMON. This browsing didn't hurt a bit, and I hope it gave you some tools to better understand your computer. ®

SYMBOL MASTER™

**MULTI-PASS SYMBOLIC
DISASSEMBLER
FOR THE COMMODORE 64***
disassembles any 6502/6510
machine code program into
beautiful source

- Learn to program like the experts!
- Adapt existing programs to your needs!
- Automatic LABEL generation.
- Outputs source code files to disk fully compatible with your MAE,* PAL,* CBM* or Develop-64* assembler, ready for re-assembly and editing!
- Outputs formatted listing to screen and printer.
- Automatically uses NAMES of Kernal jump table routines and all operating system variables.
- Generates list of equates for external addresses.
- Generates complete cross-referenced symbol table.
- Recognizes instructions hidden under BIT instructions.
- 100% machine code for speed.

(Symbol Master™ is not copy protected.)

ORDER NOW! Available on disk only. Introductory

price \$49.95 postpaid USA.

*MAE is a trademark of Eastern House.
PAL is a trademark of Pro-Line.

Commodore 64 is a trademark and CBM is a registered

trademark of Commodore.
Develop-64 is a trademark of French Silk.

**UNLEASH THE POWER OF
YOUR COMMODORE 64
WITH THE ULTIMATE
INTERFACE**

- Control & monitor your home — appliances, lights & security system
- Intelligently control almost any device
- Connect to Analog-to-Digital Converters
- Control Robots
- Perform automated testing
- Acquire data for laboratory & other instrumentation applications
- Many other uses.

Don't make the mistake of buying a limited capability interface. Investigate our universally applicable Dual 6522 Versatile Interface Adapter (VIA) Board, which plugs into the expansion connector and provides:

Four 8-bit fully bidirectional I/O ports & eight hand-shake lines • Four 16-bit timer/counters • Full IRQ interrupt capability • Four convenient 16-pin DIP socket interface connections • Expandability up to four boards & sixteen ports.

ORDER NOW! Price \$169, postpaid USA. Extensive documentation included. Each additional board \$149.

COMMODORE 64™ SOURCE CODE!

**"What's Really Inside the
Commodore 64"**

- Most complete available reconstructed assembly language source code for the C-64's Basic and Kernal ROMs, all 16K.
- You will fully understand calls to undocumented ROM routines, and be able to effectively use them in your own programs.
- Uses LABELS. Not a mere one-line disassembly. All branch targets and sub-routine entry points are shown.
- TABLES are fully sorted out and derived.
- Completely commented, no gaps whatsoever. You will see and understand the purpose of every routine and every line of code!
- Complete listing of equates to external label references.
- Invaluable fully cross-referenced symbol table.

Order C-64 Source. \$29.95 postpaid USA.

All orders shipped from stock within 24 hours via UPS. VISA/MasterCard welcomed.

Re-ink any fabric ribbon
AUTOMATICALLY for less
than

5¢ Mac Inker

Extremely simple operation, with built in electric motor. We support over 750 types of printers - cartridge, spool, harmonica, or zip pack type. Most MAC INKER(s) cost less than \$60.00. (Add \$3.00 for UPS shipping anywhere in the US).

Use your MAC INKER to re-ink your dry cartridges (for less than 5 cents in ink) and watch the improvement in print-out quality. Our residue-less, lubricated, dot-matrix ink yields a darker print than most new ribbons. Or get any of our 6 basic ink colors: brown, blue, red, green, yellow, purple and use MAC INKER to CREATE YOUR OWN COLORED CARTRIDGES. We have uninked cartridges. Load the cartridge on MAC INKER, ink in the desired color, and re-ink when appropriate.

Most cartridges can be used almost indefinitely, if ribbon is regularly re-inked, kept moist and lubricated so that the fabric does not fray. Some customers have reported 80 re-inkings of the same cartridge.

As of February 85, we have over 30,000 MAC INKER(s) in the field, in 5 continents (220V motors available). MAC INKER has been reviewed, approved and flattered in most magazines and even in the NEW YORK TIMES and the CHICAGO SUN TIMES.

Order toll free 1-800-547-3303 or ask for free, detailed brochure. Dealers inquiries welcome.

Telecomm

RUN continues its series on telecommunications with a look at two popular general-interest on-line utilities.

The Source and Delphi

By MARGARET MORABITO

ED JUDICE

The first part of this article covers The Source, one of the oldest public on-line utilities. You'll then be introduced to and learn about the younger Delphi, which is making great strides and quickly becoming a prime contender

in the growing group of general-interest on-line services.

The Source

The Source is one of the most well-known on-line information utilities in this country. Founded in 1979,

The Source Telecomputing Corporation (STC) was taken over by The Reader's Digest Association in 1980 and is partly owned by Control Data Corporation.

The Source prides itself in providing the general public with self-help information for use in personal and business affairs. With a current membership of 60,000 and about 2000 new subscribers a month, The Source, like many on-line utilities today, is experiencing rapid growth as more and more people acquire personal computers at home and in the office.

The Source tends to be more business-oriented than some of the other general on-line utilities; businesses make up 60% of its subscribers, with the balance consisting of the general public. The average client is in his or her late 30s, with at least a college education and a high family income. The constantly growing membership has prompted The Source to revise and add new services.

Expanded Business Services

Of the eight main menu categories (see Table 1), the business offerings have been most expanded in recent months. In January, the Business and Investing section added a new service that will provide up-to-the-minute commodities prices, news and commentary via satellite from the Commodity World News in Chicago.

Members can now receive continuous updates on prices from six domestic exchanges and three overseas

Communications

exchanges; 200 news items per day, covering weather, worldwide developments affecting commodities and White House news; and correspondent news commentaries about the happenings on the floor of the commodities exchange.

A second investment service, just begun in late March, is INVESTEXT (The Business Intelligence Database), through which you can gain access to 38 international investment banking firms. INVESTEXT offers full-text research reports from 27 U.S. and 11 foreign investment firms. Anyone with investment and business connections will appreciate these newest offerings.

Of course, The Source also offers many of the more popular general-interest services for communications and consumer transactions, such as electronic mail, first-class U.S. mail delivery from ECOM, CompuStore, games and travel planning.

One feature of The Source that personal computer owners will find fascinating is MicroSearch, offered in the Personal Computing category. Through MicroSearch, you gain access to thousands of article abstracts from over 100 computer industry publications. These give you quick reference material on software, hardware, peripherals, new product releases and just about anything dealing with personal computing from over 3000 manufacturers.

The Source's membership fee reflects the growing tendency toward

lower prices throughout the computer industry. Last year, The Source cut its membership fee in half. Now, \$49 will give you access to the services on The Source, including a monthly newsletter with the latest Source news, updated command guides, The Source Manual and free customer support. The Customer Support service, at 800-336-3330, is always available and helpful.

If you have a major credit card, you can join The Source. First, call 800-336-3366. You will immediately be given your identification number and private password over the phone. Later, you'll receive the documentation, a personal identification card from The Source and your local network phone number. You can also join by phoning the same number and requesting that a membership agreement be mailed to you. You simply fill out the agreement and mail it back to The Source.

The hourly on-line rates are \$7.75 for evenings and weekends and \$20.75 for business hours. If you have a 1200-baud modem, you must pay an hourly surcharge. There's also a \$10 monthly minimum charge, as well as charges for any of your own personal or business files that you may store in The Source. A higher hourly fee is charged for certain value-added services.

Logging-On

Logging-on to The Source is not difficult, but it takes some getting

used to if you're accustomed to the easy prompts of using Tymnet. The Source uses Uninet and Telenet, both of which are significantly different from Tymnet. The main difference with these networks is that their prompts are not very descriptive, so you must know beforehand exactly how to respond to the system.

What follows is a brief rundown of logging-on to The Source, using Telenet with the 1650 Auto-Modem and its accompanying terminal program, TERM64.

The Auto-Modem is an easy-to-use, low-cost (about \$60) auto-dialing modem, which is manufactured by Commodore for the C-64 and the VIC-20; it can also be used on the new Commodore 128 personal computer. The Auto-Modem comes with a good-quality dumb terminal, but you'll probably want to purchase a smart terminal to take full advantage of what the many on-line services offer.

Without a smart terminal, you won't be able to get free programs over your modem, nor will you be able to send your own files to others. The Auto-Modem is quite versatile and works with most smart terminal programs that are being sold for the C-64 nowadays. Having auto-dial and auto-answer capabilities, this modem is more than worth its price.

With your Auto-Modem properly connected and your system all powered up, load and run TERM64. The screen clears, displaying a Terminal Ready prompt, beneath which is the

word "Disconnected," and under *that* is another Terminal Ready prompt. This display signals that the phone lines are clear and awaiting your call. Press f6 for instructions for setting the two switches on the Auto-Modem. Move T-D to D for data and move O-A to O for originate. Now you'll be prompted to type in the Telenet phone number for your location.

Type in the digits of the phone number without any parentheses, spaces or dashes; if the number happens to be long distance, type 1 before it. Press the return key when finished and wait.

As the modem dials your number, each digit will appear on the screen, one by one. When a connection is made, the red light on the left side of the Auto-Modem will shine, and the screen will display the Terminal Ready prompt, indicating that you have successfully connected with the Telenet network.

You won't see any prompts, but you should press the return key twice. Then, at the Terminal= prompt, press the return key one more time. At the @ prompt, type C 30149. This number is given to you in The Source sign-on booklet or over the phone, and it is for Commodore computer systems.

After you have entered the system number and pressed the return key, you'll be informed of your connection to The Source. Then, you will see an arrow prompt. If you don't know the log-on procedure beforehand, you'll have quite a hard time guessing what this arrow means. You should type ID, followed by a single space, and then your Source identi-

fication number. Press the return key and, at the next arrow, type your password followed by Return.

After using the simple, clearly labeled Tymnet phone network for other on-line utilities, I found Telenet more of a mystery to handle at first. However, once you become familiar with the Telenet procedure, you won't have any difficulty.

How to Navigate

The Source offers menu selections, which have recently been revised for easier usage. Many of the menu selections now have their own command words, within parentheses, after the selection. The Source designed the system this way so that newcomers could learn the appropriate commands with continued usage and then start using the faster commands rather than the slow menus.

You can always find a list of commands while on-line by typing "Help" at any command prompt. Even with this new design, however, navigating through The Source's command system can be difficult for a new member.

This is not the kind of service for light browsing. If you don't know the commands, you can get caught in unwanted territory. I recommend you study the excellent command guide that The Source gives you before going on-line. This will save you much aggravation.

By the way, you should quickly learn to turn off Chat mode. I was cornered by a persistent chatterer on my first sojourn into The Source, and I couldn't escape because I knew nei-

ther the command to start chatting back nor the command to quit Chat mode. I ended up wasting a lot of valuable time, and the interruption was unwelcome. For more information, write The Source, 1616 Anderson Road, McLean, VA 22102.

Delphi

When the people behind Delphi claim their on-line service is the "friendliest, easiest-to-use system ever," they're telling the truth. When you first log-on to Delphi, you feel as though *you* are in control, not some mainframe computer. For example, when logging-on, you can tell Delphi the number of characters that will fit on your screen, thereby avoiding the hard-to-read, broken 80-column display lines sent by many other services.

Delphi does provide a handbook, but you really don't need it to use the system. You can easily log-on using Tymnet and go for a tour through Delphi, taking your time and being helped along the way. If you want to break out of any location within any service, you just press CTRL Z.

Anyone interested in a vast amount of research information will appreciate Delphi. Not only does it give you its own 20,000-entry encyclopedia; it also provides a gateway to Dialog, the most sophisticated research library on-line. Dialog alone holds 200 separate databases for serious research. Initially targeted at the home user, Delphi has added new services that are now attracting the business user.

For those of you who want more versatility in your communications, Delphi is worth examining. It not only offers you the standard services, like electronic mail and U.S. mail delivery, but it also gives you access to subscribers of other on-line services through electronic mail. If you have business associates and friends who use The Source and CompuServe, you can easily keep in touch with them through Delphi's own electronic mail service.

Delphi has another unique service called Globalink, which provides the expertise of professional translators who take incoming electronic text files and translate them into foreign languages, such as German, Italian and French. The translated text files can then be sent anywhere in the world.

People wanting entertainment possibilities will find plenty in Delphi. Over 30 games are currently on-line.

Table 2. *The services available on Delphi.*

Consumer transactional services are also on the menu, including electronic shopping and banking. (See Table 2 for all of Delphi's offerings.)

To subscribe to Delphi, call 800-544-4005. You'll be mailed a Delphi

membership registration form, which will give you your password and a code number that you'll need to complete your registration. You will be asked to make up your own Delphi name, which will be used while on-

line. As with most on-line services, you'll need a major credit card for billing purposes.

The subscription fee is \$49 and covers a handbook, regular updates, a newsletter, a password and two free hours on-line. There's also a Delphi Starter Kit, available in computer stores for \$29. It gives you one free hour and a command card; with this, you phone in your membership information or mail in the membership agreement form.

Hourly rates are \$6 for evenings and weekends and \$16 for office hours. There is no monthly minimum charge and no surcharge for using a 1200-baud modem. You must pay extra for certain value-added services and for storing your personal files on Delphi.

You log onto Delphi using the Tymnet network. After entering the Tymnet phone number and being connected, you should expect the following prompts.

```
Please Type
Terminal Identifier  A
Please Log On       Delphi + Return
Connected          Return
User Name          User Name + Return
Password           Password + Return
Now on Delphi. . .
```

For more information, write to Delphi, General Videotex Corporation, 3 Blackstone St., Cambridge, MA 02139.

The Source and Delphi both offer vast opportunities for both professional and personal users. Each utility provides services in three major areas of telecommunications: research information, communications and transactional services.

Anyone who wants to join a general-interest utility should do some research into the offerings, costs, ease of handling and special services offered. *RUN's* May and June issues contain articles on two other well-known on-line utilities: CompuServe and the Dow Jones News/Retrieval. Another good source of information is the *Omni Online Database Directory*, compiled by Edelhart and Davies and published by MacMillan, 1983.

RUN's coverage of the major on-line services will continue next month with a look at two new services devoted entirely to entertainment and personal communication—People/Link and PlayNet. 

Address all author correspondence to Margaret Morabito, c/o RUN editorial, 80 Pine St., Peterborough, NH 03458.

RUN JULY 1985 / 83

This is the second installment of a three-part article presenting the author's Basic 4.5, which gives you the power of all the Basic 4.0 commands, plus more. This month focuses on the added disk commands.

Basic 4.5

A Bigger and Better Basic

By ROBERT ROCKEFELLER

This month I will deal in more detail with the added disk commands of Basic 4.5. Basic 4.0 and 4.5 use a sophisticated parsing technique that allows the parameters following a disk command to be in any order whatsoever. This is quite a departure from Basic 2.0, where, for example, the Open command requires an exact syntax:

```
OPEN logical file#, device#, secondary  
address, "filename"
```

Deviation from this format causes a Syntax error. In contrast, all of the following command strings would be valid for the DOPEN command.

```
DOPEN #5, "TEST"  
DOPEN (A$) ONU9, D0, W, #5  
DOPEN "REL", #6, L100
```

The examples giving Basic 2.0 equivalents of 4.0 commands assume that a command channel to the disk has been opened with OPEN 15,device#, 15. Keeping this in mind, the new disk commands are as follows.

APPEND

APPEND reopens a sequential file that has been closed and allows you to append data to the end of the file. There have reportedly been problems with this command, so if you use it, always validate the disk (use COLLECT) afterward. APPEND can be followed by four parameters in any order:

1. The logical filename <#, then a number or any legal Basic numeric expression >.

2. The filename <a string or a string expression in brackets >.

3. Optional drive number <D, followed by a number or numeric expression >. The default is drive 0. Note that the 1541 is only a single drive, so it is not possible to reference drive 1.

4. Optional device number <U, followed by a number or numeric expression >. U may optionally be preceded by ON, instead of a comma. The default is unit 8.

Example:

```
APPEND #1, "SEQ", U9—open  
file# 1 to the file "SEQ" on disk  
unit 9, drive 0. Data written to the  
file will be appended to the end  
of "SEQ". (The Basic 2.0 equivalent  
is OPEN1,9,2,"0:SEQ,A").
```

BACKUP

BACKUP has no application for owners of 1541 drives. It can only be used by owners of dual drives, like the MSD Super Disk. Used to create exact copies of disks, BACKUP can be followed by three parameters:

1. Source drive number <D, followed by expression for 0 or 1 >.

2. Destination drive <D, followed by expression for 1 or 0 >. The destination drive number may be preceded by TO, instead of a comma.

3. An optional device number <U or ON U followed by expression for 4-31 >.

Example:

```
BACKUP D0 to D1—makes an
```

exact copy of the disk in drive 0 to drive 1 on unit 8. (The Basic 2.0 equivalent is PRINT# 15,"D1 = 0").

CATALOG and DIRECTORY

Either one displays the directory of a disk on the screen or printer. CATALOG may be followed by three parameters:

1. Optional filename. As described on pages 11-12 of the *1541 User's Manual*, wildcards may be inserted in the filename so that only a subset of the directory is listed. The filename may be a literal string enclosed in quotes or a string variable or expression in brackets.

2. Optional drive number.

3. Optional device number.

Examples:

CATALOG—displays entire directory of drive 0 on device 8.

CATALOG "pr*"—displays only filenames that start with "pr".

CATALOG "t??"—displays only filenames that are three letters long and start with "t".

CATALOG "*" = p" on u9—displays only program files of the disk in drive 0 on device 8. (The Basic 2.0 equivalent is LOAD"\$0" : LIST).

COLLECT

This command validates the disk and causes the disk drive to perform house cleaning. It should be executed regularly. COLLECT may be followed by two optional parameters:

1. <D, followed by expression for 0 or 1>.

2. <U, followed by expression for 4-31>.

Examples:

COLLECT—validates drive 0 of unit 8.

COLLECT D1 ON U9—validates drive 1 of unit 9. (The Basic 2.0 equivalent is PRINT# 15, "V0").

CONCAT

CONCAT concatenates two sequential files so that the resulting single file contains all the data from the original two. CONCAT may be followed by four parameters:

1. Source filename. May be a string or a string expression in quotes.

2. Destination filename. The source file will be appended to the destination file. The destination filename may be preceded by TO instead of a comma.

3. Optional source drive number.

4. Optional destination drive number. For owners of dual drives only.

Examples:

CONCAT "SEQ1" TO "SEQ"—appends "SEQ1" to "SEQ" on drive 0 of unit 8.

CONCAT D0, "SEQ2" TO D1, "SEQ3"—appends "SEQ2" on drive 0 to "SEQ3" on drive 1.

(The Basic 2.0 equivalents are PRINT# 15, "C0:SEQ=0:SEQ,0:SEQ1" and PRINT# 15, "C1:SEQ3=1:SEQ3,0:SEQ2").

COPY

COPY allows files to be copied from one disk to another if you have a dual drive. If you have a 1541, COPY allows a file to be reproduced on the same disk. You may want to do this if you are going to concatenate two files and wish to retain original copies of each. The new file must be given a different name from the source file, of course. COPY may be followed by four parameters, two of which are optional:

1. Source drive number <D followed by 0 or 1>.

2. Destination drive number. May be preceded by TO.

3. Optional source filename. String or string expression in brackets.

4. Optional destination filename. This must be a unique filename.

Examples:

COPY D0 TO D1—Copies all the files on the disk in drive 0 to the disk in drive 1 on unit 8. This re-

quires a dual drive. Unlike BACKUP, COPY does not reformat the destination disk. Instead, all files except relative files are reproduced on the destination disk. If there is not enough room on the destination disk, a Disk Full error will be flagged.

COPY D0, "TEXT" TO D0, "TEXTCOPY"—creates a file called "TEXTCOPY," containing the exact data of "TEXT" on the disk in drive 0 of unit 8.

(The Basic 2.0 equivalents are PRINT# 15, "C1=0" and PRINT# 15, "C0:TEXTCOPY=0:TEXT").

DCLOSE

DCLOSE performs the same function as CLOSE, but it has several optional forms. DCLOSE may be followed by two optional parameters:

1. <# followed by numeric expression>.

2. <U, followed by numeric expression evaluating to 4-31>.

Examples:

DCLOSE—closes all currently open files.

DCLOSE #1—closes only logical file number 1.

DCLOSE U8—closes all currently open files to device 8.

DLOAD

DLOAD loads a program to the start of Basic memory. It is like LOAD, but the syntax is different. DLOAD may be followed by three parameters:

1. Filename. This must be a string or a string expression in brackets.

2. Optional drive number <D followed by 0 or 1>.

3. Optional device number <U followed by a number 4-31>.

Examples:

DLOAD "BASIC-PROG"—loads "BASIC-PROG" from the default drive and device numbers.

DLOAD "BASIC*", D0, U9—Loads "BASIC*" from drive 0 of unit 9.

(The Basic 2.0 equivalents are LOAD "0:BASIC-PROG", 8 and LOAD "0:BASIC*", 9).

DOPEN

This command is similar to OPEN, except that only a subset of the functions of OPEN may be performed, and the syntax is different. With

Circle 81 on Reader Service card.

BACKUP PROTECTED SOFTWARE with COPY II 64™

From the team who first brought you COPY II PLUS (Apple), COPY II PC (IBM) and COPY II MAC (Macintosh) comes a revolutionary new copy program for the Commodore 64, COPY II 64!

- Copies most* protected software — automatically.
- Copies even protected disks in just 3½ minutes.
- Maximum of four disk swaps on a single drive.
- Copies half and full tracks.
- Requires just one 1541 drive on the Commodore 64.

Call M-F 8-5:30 (W. Coast time) with your   : 503/244-5782.
Or send a check (add \$3 s/h, \$8 overseas) to

\$39.95

**CENTRAL POINT
Software, Inc.**

9700 SW Capitol Hwy. #100
Portland, OR 97219

* We update Copy II 64 regularly to handle new protections; you as a registered owner may update at any time for 1/2 price! (To update, just send original disk and \$20.)

This product is provided for the purpose of enabling you to make archival copies only.

DOPEN, any type of file may be opened for reading, but only relative and sequential files may be opened for writing. There may be up to five parameters in the command string:

1. <# then numeric expression>. This represents the logical file number. The secondary address is automatically allocated by the DOPEN command.

2. A filename. This must be a string or a string expression in brackets. If the filename is preceded by the @ character, the file will be opened with replace.

3. Optional drive number <D followed by 0 or 1>.

4. Optional device number <U followed by 4-31>.

5. Optional file-type selector. This parameter should be included only for writing files. Files that read from the disk do not require a file-type selector. This may be L and a numeric expression for 1-254, or W by itself. Both parameters may not occur in the same command string. L is required only when opening new relative files; it is not required to reopen a previously opened relative file that has been closed. W signifies that a sequential file is to be opened for writing.

Examples:

DOPEN #1, "OLD FILE"—opens "OLD FILE" for reading. This file may be a sequential, relative, user or program file. It will be referenced through file number 1.

DOPEN #1, "NEW SEQ", W—opens a new sequential file for writing.

DOPEN #1, "NEW REL", L100—opens a new relative file. The record length will be 100 bytes long. Once a relative file has been opened, it may be read or written to at any time.

DOPEN #1, "@OLD SEQ", W—opens a new sequential file for writing; this will replace a file called "OLD SEQ".

(The Basic 2.0 equivalents are OPEN 1,8,2,"0:OLD FILE", OPEN 1,8,2,"0:NEW SEQ,S,W", OPEN 1,8,2,"0:NEW REL,L," + CHR\$(100) and OPEN 1,8,2,"@0:OLD SEQ,S,W").

DS and DS\$

DS and DS\$ are not new disk commands. They are reserved variables, after the manner of TI, TI\$ and ST in Basic 2.0. DS is a numeric variable containing the error number of the

last disk access. This may range from DS = 0, meaning no error, to DS = 74, meaning drive not ready. DS\$ contains the string that was received from the disk when the disk's error channel was queried.

The disk error channel is read every time DS is referenced, either in a direct Basic command, such as PRINT DS;DS\$, or in a program.

Typical use is as follows:

```
1000 IF DS>19 THEN PRINT
DS$ : STOP : REM DISK ERROR
(The Basic 2.0 equivalent is 1000
INPUT #15,A,B$,C,D : IF A>19
THEN PRINT A;B$;C;D : STOP).
```

DSAVE

DSAVE saves a Basic program to disk. It is similar to SAVE, but less typing is required. DSAVE may be followed by three parameters:

1. The filename. As always, this must be a string or a string expression in brackets. If the filename is preceded by the @ character, the Save-with-Replace option is selected. Concerning the controversial Save-with-Replace option, let me say this: I think the secret to replacing files reliably involves two things—not letting your disks get too full, and val-

iding the disk after every Save-with-Replace or Open-with-Replace and after every scratch. I used to lose files occasionally when I failed to perform those functions.

2. Optional drive number <D followed by 0 or 1>.

3. Optional device number <U followed by 4-31>.

Examples:

DSAVE "BAS.PROG"—saves a Basic program on the default drive and device.

DSAVE "@BAS.PROG" ONU9—saves Basic program on device 9, drive 0, replacing any program named "BAS.PROG". (Basic 2.0 equivalents are SAVE "0:BAS.PROG",8 and SAVE "@0:BAS.PROG",9).

HEADER

HEADER is used to format a new disk so that it will be usable by the disk drive. After executing the HEADER command, a prompt will appear (except in program mode) asking, "are you sure?" If you are, type Y. HEADER may be followed by up to four parameters in any order:

1. Disk name. This is a string or a string expression in brackets.

2. Drive number. This is compulsory <D followed by 0 or 1>.

3. Optional identifier <I plus a two-character identifier>. This must be different for each disk. This is what the DOS looks at when it wishes to determine if a different disk has been inserted. If the identifier of two disks is the same, and one disk is inserted after the other, the DOS will not read the BAM (block allocation map) of the second disk into disk memory; it will read and write files according to the BAM of the first disk.

The BAM tells the DOS which blocks of the disk are used by files and which are available. If the first disk had certain blocks free and the second disk is using these same blocks for file storage, it is possible that the allocated blocks of the second disk will be overwritten, corrupting what might be a valuable program or data.

If the identifier is omitted, the disk will not be reformatted; only the directory will be erased. The identifier would remain the same.

4. Optional device number <U followed by 4-31>.

Examples:

HEADER D0,"NEW DISK",IZX

—formats the disk in drive 0 of unit 8, naming it "NEW DISK" and an identifier of ZX.

HEADER "NEW DISK1",D0—erases the directory of the disk in drive 0 of unit 8, renaming it "NEW DISK1". The identifier remains the same. (The Basic 2.0 equivalents are PRINT# 15,"N0:NEW DISK,ZX" and PRINT# 15,"N0:NEW DISK1").

RECORD

This command is designed to be used in conjunction with relative files. RECORD positions the disk's internal record pointer to the desired record, which then may be read or written to. This is the only Basic 4.0 disk command that has an invariable syntax. It is as follows: RECORD # logical file# , record# [,optional byte within record]. If no byte position within the record is specified, byte 1 is assumed.

Examples:

RECORD#1, 1000—positions the record pointer to byte 1 of record 1000. (Assuming that a command channel has been opened to the disk using secondary address 15, the Basic 2.0 equivalent is

THE AMAZING VOICE MASTER

Three Exciting Products in One:

- **Speech Synthesizer** — Your Computer can talk to you in your own voice.

PRINT# 15,"P" CHR\$(5) CHR\$(
((1000/256 - INT(1000/256)*256)
CHR\$(1000/256) CHR\$(1))).

RENAME

RENAME is used, as its name suggests, to rename disk files. It may be followed by four parameters:

1. The name of the file you wish to rename. This must be a string or a string expression in brackets.
2. The new filename. This may be preceded by TO instead of a comma.
3. Optional drive number <D followed by 0 or 1>.
4. Optional device number <U followed by 4-31>.

Examples:

```
RENAME "OLD NAME" TO  
"NEW NAME".
```

```
RENAME D1,"OLD NAME",  
"NEW NAME".
```

(Basic 2.0 equivalents are PRINT# 15,"R0:NEW NAME=0: OLD NAME" and PRINT# 15,"R1: NEW NAME=1:OLD NAME"). NAME=1:OLD NAME").

SCRATCH

This command erases one or more files from the disk. As in CATALOG, DOPEN, DLOAD and APPEND, pattern matching may be used. After scratching a file, DS will show 1, and the number of files actually deleted will occupy the position usually listing a track number.

For instance, if two files have been scratched, DS\$ will show 01, FILES SCRATCHED,02,00. (Similar to HEADER, there is a safety feature—the screen displays "are you sure?" before a file is actually deleted.) SCRATCH may be followed by three parameters:

1. A filename you wish to erase. It must be a string or a string expression in brackets.
2. Optional drive number <D followed by 0 or 1>.
3. Optional device number <U followed by 4-31>.

Example:

```
SCRATCH "FILENAME". (The  
Basic 2.0 equivalent is PRINT#  
15,"S0:FILENAME").
```

That covers all of the Basic 4.0 disk commands. Although Basic 4.0 was designed primarily to save typing and to improve the readability of Basic program listings, you can no doubt see that it also makes it possible to run many PET/CBM programs on your C-64.

Now we'll continue with the disk commands that Basic 4.5 adds to 4.0.

DCLEAR

This command initializes the disk, causing the drive to read the BAM and the directory of the current disk. This should be performed to prevent disk damage when two disks having the same identifier are inserted, one after the other. To be safe, execute DCLEAR every time you insert a new disk. Two optional parameters are allowed:

1. Optional device number <U followed by 4-31>.
2. Optional drive number <D followed by 0 or 1>.

Example:

```
DCLEAR. (The Basic 2.0 equivalent is PRINT# 15,"I0").
```

BLOAD

This command is used to load a program—machine language or otherwise—to either a specified location or to the address from which it was saved. It may be followed by four parameters:

1. A filename. This must be a string in quotes or a string expression in parentheses.
2. Optional load address. P followed by the address at which the program will be loaded. If this is omitted, the program will be loaded at the address from which it was saved.
3. Optional device number <U followed by 4-31>.
4. Optional drive number <D followed by 0 or 1>.

Examples:

```
BLOAD "M.L.PROG"—loads  
the program to the address from  
which it was saved.
```

```
BLOAD "DATA", P$C000—  
loads data to address $C000 or  
49152.
```

BSAVE

This is used to save a portion of memory to disk. It may be followed by four parameters:

1. A filename. A literal string in quotes or a string expression in parentheses.
2. A save between a starting and ending address. This is of the format P <starting address> TO P <ending address>. The TO in the middle is compulsory.
3. Optional drive number <D followed by 0 or 1>.

4. An optional device number <U followed by 4-31>.

Example:

```
BSAVE "M.L.PROG",P$C000  
TO P$D000—saves the memory  
from $C000 to $CFFF to drive 0 of  
device 8.
```

MERGE

This command is used to merge two Basic programs together. One must be on disk, and the other resident in memory. MERGE may be followed by four parameters:

1. A filename. This must be a literal string in quotes or a string expression in parentheses.
2. A logical file number <# followed by 1-255>.
3. An optional drive number <D followed by 0 or 1>.
4. An optional device number <U followed by 4-31>.

For a MERGE example, enter the following program in memory after entering NEW:

```
10 PRINT "A DEMO"  
20 PRINT "DOES NOTHING"  
30 PRINT "END"
```

To create a file that can be merged or executed (with EXEC), open a sequential file and list the program to disk:

```
DOPEN "X.DEMO", W, #1 :CMD1 :LIST
```

Close the file with:

```
PRINT#1 :DCLOSE
```

Now type NEW to erase this program, and enter:

```
5 REM A DEMO  
15 REM DOES NOTHING
```

Now type

```
MERGE #1, "X.DEMO"
```

and hit the return key. List the program. The result should be as below.

```
5 REM A DEMO  
10 PRINT "A DEMO"  
15 REM DOES NOTHING  
20 PRINT "DOES NOTHING"  
30 PRINT "END"
```

Normally, MERGE will not be used in this manner, but to merge commonly used subroutines with your programs. For instance, say you have a subroutine that inputs numbers from the user. You could number this program in increments of 1, starting at a high line number, say 60000-60020. When this program is merged, it will exist as a separate entity within the program resident in memory. It is possible (and desirable) to have many useful subroutines existing as ASCII sequential files on disk. I rec-

ommend you number each with a different line range.

EXEC

To create EXEC files, use the same method as in creating MERGE files. EXEC and MERGE also use identical syntax. If you typed in the example used above in MERGE, then try EXEC #1, "X.DEMO" to see EXEC in action.

EXEC works by reading a line of Basic from the disk, then executing this line just as if it had been typed in at the keyboard. MERGE works the same way; the only difference between them is that EXEC discards the line number while MERGE retains it. Within limits, any legal Basic program can be used to create an EXEC file. The limits are as follows.

1. Only a legal Direct mode command should be in an EXEC file. By Direct mode, I mean the mode the computer is in when a program is not running. The only exceptions to this are the INPUT and GET commands. INPUT, INPUT#, GET or GET# can be used in Direct mode if a programming trick is used. The trick is this:

```
POKE58,0          : INPUT$
```

The Poke statement fools Basic into thinking that a program is running. You must leave a few spaces between the POKE58,0 and the Input statement, since this is where the data for A\$ will be stored. If you don't leave a few spaces, the Input command will be overwritten, resulting in a Syntax error.

2. For...Next loops are allowed, but both must be on the same line. Example 1, below, is legal, but example 2 will cause a Next-Without-For error.

Example 1:

```
10 FOR LOOP=1 TO 10 : POKE850,0 :  
NEXT LOOP
```

Example 2:

```
10 FOR LOOP=1 TO 10 : POKE850,0  
20 NEXT LOOP
```

3. The Read, Data and Restore commands are useless because Direct-mode data statements are not allowed.

4. The On, Goto, Gosub and Return commands are not usable in an EXEC file unless you intend to transfer control to a program in memory.

5. Basic 4.5 statements that open or close files should not be used. This rules out nesting EXEC statements.

AFFIX

Use AFFIX when it is desired to append a program on disk to a program in memory. This is a little different from MERGE. Try the example below. First type NEW and hit the return key to clear memory, then type in the following program.

```
10 REM A DEMO  
20 REM A DEMO
```

Save this with DSAVE "AFFIX DEMO". Type NEW then hit the return key. Enter the following:

```
100 REM  
110 REM
```

Now enter AFFIX "AFFIX DEMO". When the List command is executed, you will see this:

```
100 REM  
110 REM  
10 REM A DEMO  
20 REM A DEMO
```

AFFIX works by setting the start-of-Basic pointer to point to the end of a program in memory, then executing DLOAD. To make effective use of AFFIX will require some kind

of renumbering program; there are several in the public domain.

SEE

This command is used to list a sequential file on disk to the screen. It allows viewing EXEC/MERGE files just in case you forget what's what. SEE may be followed by four parameters:

1. A filename. A literal string in quotes or a string expression in brackets.

2. A logical filename <# followed by 1-255>.

3. An optional drive number <D followed by 0 or 1>.

4. An optional device number <U followed by 4-31>.

Example:

SEE #1, "X.DEMO"

At the end of this article are the loaders for the disk commands. Within limits, you may pick and choose among the commands you wish to enter. For instance, if you need BLOAD, but not EXEC, you can type in the loader for BLOAD and forget about the loader for EXEC.

You must previously have typed in the "OVERHEAD" loader program. (See Listing 1 in the June installment.) Also, before you type in any of the disk commands, you must type in the "Disk Parser" and "Disk Miscellaneous" loader programs (Listings 1 and 2 in this installment). These contain code used in common by all the disk commands.

For those of you who don't want to type in the listings, I'll offer copies at the end of this series. 

Address all author correspondence to Robert Rockefeller, RR #4, Langton, Ontario, Canada NOE 1G0.

Listing 1. Disk Parser; must be loaded along with Listing 2 before you load any of the Disk Command loaders.

WORD PROCESSING BREAKTHROUGH!

40 or 80 Columns
in Color

Paperback Writer 64

40 or 80 Columns
in Color

This is the easiest to use and most powerful word processor available for the Commodore 64. As you type on the screen, you will see your letters and words appear on the screen exactly as they will be printed (i.e. Italics will be *Italic*, Bold Face will be **Bold Face**). With the printer files you can customize Paperback Writer 64 to use all the fancy features of your printer. Loads EZ Script[®], Paperclip[®], & Wordpro 64[®] Files so you can easily upgrade your past wordprocessing text that you've written with obsolete wordprocessors. Take a look at some of the other features:

- **Wordwrap** — No Words Break At The Edge Of The Screen.
- **Flexible Cursor Movement**, Including Tabs And Other Timesavers.
- **Deletion And Insertion** Of Characters, Lines And Blocks Of Text.
- **On-screen Text Enhancement**, Such As Bold Face, Italics, Underlining, Superscripts And Subscripts, And Foreign And Other Characters.
- **Manipulation Of Blocks (ranges)** Of Text For Functions Such As Moving And Deleting, Even Between Files.
- **Sorting Lists** In Order Of Numbers And Letters.
- **Aligning And Adding Numbers** In Columns, Helpful With Tables.
- **Variable Margins** At Left And Right, And Paragraph Indentation.
- **Lines Centered, Justified Or Aligned** At The Right Side.
- **Variable Page Lengths And Line Spacing.**
- **Borders** At Top Or Bottom With Optional Title Lines And Page Numbers.
- **Linked Files** To Print Extra-long Documents In Sequence.
- **Flexible Printer Set-up** To Allow Use With Any Printer.
- **Find And Replace** Text Functions That Can Be Automatic.
- Complete Or Selective **Directories** Of Files On The Disk.
- **Sequential Files** For Mail Lists And Communication With Other Computers.
- **Spelling Checker**, Checks Your Spelling.

INTRODUCTORY PRICE

\$39⁹⁵

☆☆☆ **Plus** ☆☆☆

Full help screens on line with additional help on the disks mean you don't even need a manual. If you're in the middle of a page and you want to know how to use a special function just hit F7 and the information will appear before your eyes. If you still don't understand hit F7 again and a more detailed explanation appears. Then simply hit F8 and you're back in the letter where you left off. No manual lookup necessary. This is the easiest word processor in the world to use.

List \$99.00. **Introductory Sale Price \$39.95.**

DOUBLE PROTECTO FREE TRIAL

We are so sure this is the easiest and most powerful word processor available, we will give you 30 days to try it out. If you are not completely satisfied, we will refund your purchase price.

From p. 10.

want, you can attach the new transformer to the top of the old power supply; it's not too fancy, but it's definitely functional.

John Long
Clarkston, GA

be loaded with ,8,1. The clue is a good one, since Radio Shack and some other computers reserve the USR designation for machine language files.

Eddie Lyons
Bronxville, NY

\$21A Disk archives—A compulsory part of anyone's disk library is the file of backup disks. For my own backup file, I used brand-new disks, appropriately named and write-protected and sealed in zip-lock sandwich bags to guard against dust and moisture. These are then put in a plastic disk box and stored in a linen cupboard, far away from magnetic fields of any sort.

Jim Lynch
Antigua, West Indies

\$21E GET# improved—Here's an incredible C-64 trick that works the same as the GET# statement, but is about five times faster. The editors tried it on a directory-reading program that contained a lot of GET# statements, and execution time was cut in half.

There's a routine in the operating system that works like CMD, but in the opposite direction—it defines a certain file as the input channel, rather than the output channel. To call the routine from Basic, Poke the file-number into location 781, then execute a SYS 65478. Once that's done, you can use the normal GET statement to read a character from the file. When you're through reading from the file, you must clear the input channel with SYS 65484.

The trick speeds things up because Basic is relieved from constantly switching its input channel between the keyboard and the file. Although we've only tested it on disk, it should work with cassette files, too.

Tim Gerchmez
Bellevue, WA

\$21B Disk hang-up fix—Sometimes disk drives, especially the older ones, seem to disregard your commands from the keyboard. When this happens, try simultaneously pressing the stop and restore keys. Chances are, the hang-up will end immediately.

Eric Haver
Pittsburgh, PA

\$21C 2040/4040 disk drives—If you use one of these units, you may have trouble loading software written for the 1541, even though the disk formats are compatible. It sometimes helps if you put the 1541 disk in drive 0 and put another formatted disk in drive 1. If the program still doesn't load, it's because the manufacturer used a protection scheme that depends on the frailties of the 1541 drive.

Bruce Jaeger
St. Paul, MN

\$21F Closing files—The well-known SYS65511, often said to close all files, really doesn't do that. It causes the computer to forget its opened files, but does *not* signal the peripherals to close them. While some may call this a minor difference in semantics, it can be disastrous when disk files are involved. The following one-liner is the easiest and most effective way I've found to close all open files at once, regardless of what files they are or of when and where they were opened.

```
X = PEEK(152) : FOR J = 1 TO X : CLOSE PEEK(601) : NEXT
```

Location 152 contains the number of currently open files. The ten-byte queue starting at 601 contains their file numbers and works similarly to the keyboard buffer. As each file is closed, its entry is removed, and the rest are moved down one byte. If you enter the one-liner exactly as shown, you'll successfully close all files.

By the way, POKE 152,0 yields the same results as SYS65511. In fact, that is exactly what SYS65511 does.

Charles Lavin
Coral Gables, FL

\$21D Disk-save command quirks—If you type

```
SAVE"PROGRAM",8
```

you will get "PROGRAM" PRG in the disk directory. If you type

```
SAVE"PROGRAM,S",8
```

the directory will show "PROGRAM" SEQ, and the program won't load unless you enter LOAD"PROGRAM,S". If you save it as "PROGRAM,U", it will similarly show up as "PROGRAM" USR in the directory, and must be loaded as "PROGRAM,U".

You can use these quirks in several ways. If, for instance, you save a program whose name ends in ".S", you give it a modest amount of security from being loaded by others. Only those in the know would think of trying to load what appears to be a SEQ file. Or, if you make it a habit to end machine language program names with ".U", the USR in the directory will be your clue that they must

\$220 Disk ID changers—A disk's two-character ID is recorded once in the directory and once on each disk sector. If you have inadvertently given two disks the same ID, you can use the following routine to change the directory, which will avoid most of the problems of duplicate IDs. Use spaces where they are shown in the

Print# statements, and don't forget the semicolon at the end of line 50.

```
10 OPEN 15,8,15,"I0" : OPEN 2,8,2,"#"
20 INPUT "NEW ID";ID$
30 PRINT#15,"U1:2 0 18 0"
40 PRINT#15,"B-P:2 162"
50 PRINT#2,ID$;
60 PRINT#15,"B-P:2 0"
70 PRINT#15,"U2:2 0 18 0"
80 PRINT#15,"I0"
90 CLOSE 2 : CLOSE 15
```

By adding these lines, the program can be changed to restore the disk's original ID. Note the new line 20.

```
20 PRINT#15,"M-R"CHR$(18)CHR$(0)CHR$(2)
25 GET#15,A$,B$: ID$ = A$ + B$
```

Mark Niggemann
Ames, IA

\$221 Write-protect detector—This routine detects if your disk has its write-protect notch covered. It reads bit 4 of a port at \$1C00 on the disk controller; if the bit is set, the write-protect notch is open.

```
10 OPEN 15,8,15
20 PRINT#15, "M-R"CHR$(0)CHR$(28)
30 GET#15,A$: A = ASC(A$ + CHR$(0)) AND 16
40 IF A = 0 THEN PRINT "WRITE PROTECTED"
50 CLOSE 15
```

Mark Niggemann
Ames, IA

\$222 Outside reading—*IEEE Spectrum*, the monthly publication of the Institute of Electrical and Electronics Engineers, is a semi-technical journal of interest to all sorts of electrical engineers. Its March 1985 issue contained a superb ten-page article on the design history of the Commodore 64. It includes, among other things, the real explanation of "sparkle" on the early 64s and tells why the 1541 disk drive is so slow. If you know an IEEE member, ask to see that copy.

L.F.S.

\$223 Wavy video—If your power supply is physically close to your monitor, it can cause a slow, side-to-side waving in the video display.

Sechzig Hertz
Störung, Germany

\$224 Hex conversion aid—Radio Shack's #65-990 Programmer's Hexadecimal Calculator has been a wonderful addition to my computer room. It converts hex to decimal and vice versa, more smoothly and with less effort than any unit I've seen. It includes a clock and calendar, so it's useful even when sitting on the desk. At \$24.95, it's a worthwhile tool for any programmer.

Oberon King
Staten Island, NY

SUPER FORTH 64+ TOTAL CONTROL OVER YOUR COMMODORE-64* USING ONLY WORDS MAKING PROGRAMMING FAST, FUN AND EASY! MORE THAN JUST A LANGUAGE...

A complete, fully-integrated program development system.

Home Use, Fast Games, Graphics, Data Acquisition, Business, Music
Real Time Process Control, Communications, Robotics, Scientific, Artificial Intelligence

A Powerful Superset of MVPFORTH/FORTH 79 + Ext. for the beginner or professional

- 20 to 600 x faster than Basic
- 1/4 x the programming time
- Easy full control of all sound, hi res. graphics, color, sprite, plotting line & circle
- Controllable SPLIT-SCREEN Display
- Includes interactive interpreter & compiler
- Forth virtual memory
- Full cursor Screen Editor
- Provision for application program distribution without licensing
- FORTH equivalent Kernel Routines
- Conditional Macro Assembler
- Meets all Forth 79 standards*
- Source screens provided
- Compatible with the book "Starting Forth" by Leo Brodie
- Access to all I/O ports RS232, IEEE, including memory & interrupts
- ROMABLE code generator
- MUSIC-EDITOR
- TURTLE GRAPHICS
- SPRITE-EDITOR
- Access all C-64 peripherals including 4040 drive and EPROM Programmer.
- Single disk drive backup utility
- Disk & Cassette based. Disk included
- Full disk usage—680 Sectors
- Supports all Commodore file types and Forth Virtual disk
- Access to 20K RAM underneath ROM areas
- Vectored kernel words
- TRACE facility
- DECOMPILER facility
- Full String Handling
- ASCII error messages
- FLOATING POINT MATH SIN/COS & SQRT
- Conversational user defined Commands
- Tutorial examples provided, in extensive 261 page cross referenced manual
- INTERRUPT routines provide easy control of hardware timers, alarms and devices
- USER Support

Gemstone Warrior

*Find the Caverns
And Recover the
Magical Gemstone*

For the past several years, defenders of arcade excitement and fans of adventure involvement have been looking for a successful marriage of the two qualities into one package. Gemstone Warrior might not be a match made in heaven, but it certainly is another step in the right direction.

The script of the game is similar to the most tried-and-true fantasy fables. A battle of good against evil is by now standard operating procedure for many adventures, but Gemstone Warrior isn't a simple example of the strong surviving. It requires cunning and quick thinking for you to stay out of trouble and to find your way into the caverns where the magical pieces of the gemstone are hidden.

The gemstone originally was a tool to keep the evil forces at bay and maintain tranquility throughout the land. But the villains (who live underground) became jealous of that power and rose up to snatch the stone. Once they realized that it was of no value to them, they smashed it into five pieces and scattered them around the maze of tunnels.

As the heroic warrior, you must battle ghosts, skeletons, gas plants, amoebas and demons as you work your way toward the maze.

Your wealth is measured according to how many bodies you leave in your wake and how many chests you are able to uncover. More important than the wealth are the other objects that you collect, which hold the key to remaining healthy, healing your wounds, rising from the dead, and such special effects as the ability to become invisible.

Graphics are quite good, though sometimes, at a quick glance, one item in the warrior's inventory might look a lot like another.

BThe speed and recognition factors are the game's biggest limitations. Even at the beginner's level, monsters come upon you at a pace that leaves you very little time to decide which of the inventory items you should use.

The pause key, normally used only to take breaks during a game, becomes a lifesaver in Gemstone Warrior. It gives you time to decide exactly what action to take against your enemies when you resume the game.

A joystick is optional in the game—I found it more natural to use than the keyboard. You can save a game at any point, which is extremely helpful if you have accumulated a sizable treasure and would rather not start over. Only one game can be saved at a time.

You must map out each area that you've explored so that you don't cover the same ground twice. Each game begins in a different location, and you are awarded points for the least amount of time it takes you to recover the gem.

Gemstone Warrior is a game that you can play over and over again, as the scenario changes with each new game. The challenge of this adventure should keep you occupied for a long time. (*Strategic Simulations, 883 Stierlin Drive, Bldg. A-200, Mountain View, CA 94043. C-64/\$34.95 disk.*)

Financial Advisor

*Here's Some Help
For those Major
Financial Decisions*

Put away your pencil and calculator and let the Plus/4's Financial Advisor take care of your complex figuring. This program will do the mathematics behind all of your financial decision-making for any one of five different activities: periodic-deposit accounts, periodic withdrawals, installment loans, stocks and bonds.

If you own a business or are actively involved in the investment field, this program is one you could use. If, however, you will make only one or two major purchases (such as a home or a car) every five years, you probably won't need the Financial Advisor. A quick call to your bank or car dealer will probably suffice.

This cartridge-based program is ready to use on powering up, and it won't conflict with the internal software of the Plus/4. You can jump into any of the built-in programs at any time.

The Financial Advisor is menu- and command-driven. From each of the five activities, you have several options with which you can customize your particular problem. This is quite an advantage, as you can get an accurate answer, not just an approximation.

Your job is to provide any data that you do know; the program will then calculate the unknown for you. When you first start to use the Financial Advisor, you should be very familiar with the commands and submenus so that you can fully utilize all the features of the program. The Help function, however, does allow you to view all of these commands, along with their definitions, if the need arises.

Good documentation is a necessity with a multilevel program such as this, and you will not be disappointed with the 35-page manual that comes with the Financial Advisor. It takes you step by step through an explanation of the menus and commands available and provides a reference chart of commands, as well as shortcuts for menu selection on the function keys.

The manual also leads you through five hypothetical decision-making sessions, each highlighting one of the strategies available from the main menu. This learn-by-doing method of instruction is excellent.

This program provides a Calculator mode that you can access at any time without disturbing the set-up of your specific financial activity. If you must do some quick figuring to arrive at a value that is needed in a problem, you simply switch into the calculator and do your arithmetic. You can then move back to your problem, enter the needed value, and continue on.

This is a nice feature, which you will probably rely on frequently as you use the program more and more.

Unfortunately, the program does not allow you to store your financial scenarios on disk, and I feel this is a drawback. You can print out your screen displays, but it would be much more helpful to have disk storage as well.

If you have a need for this much financial figuring power, the price and quality of the Financial Advisor make it a good choice. (*Commodore Business Machines, 1200 Wilson Drive, West Chester, PA 19380. Plus/4/\$29 cartridge.*)

Adventure Construction Set **B**

Change Your Favorite Adventure or Custom-Design Your Own

Do you find that many adventure games are interesting at first, but ultimately drive you crazy with endless labyrinths, unsolvable puzzles and unbeatable foes? Did you ever wish you could change an adventure, or perhaps create one of your own from scratch, but felt you lacked the programming skill?

With Adventure Construction Set, you can produce your own graphics adventures in the tradition of Temple of Apshai or Ali Baba and the Forty Thieves. Rather than an extensive knowledge of Basic or assembly language, all you need is your favorite joystick and a great imagination.

The program is actually three construction sets in one, allowing you to set your adventures in the fantasy world of dungeons and dragons, the cloak-and-dagger world of spies, or the science-fiction world of spaceships and aliens. Each set provides you with an abundant supply of creatures, props, sound effects and spells with which you can begin building your adventure.

Except for the music and sound effects, virtually everything provided in the basic sets can be modified. If, for example, you find an enemy to be too aggressive or powerful, simply call up his profile screen and alter any of his traits to even the odds. Also, if you simply don't like the looks of a character or object, you can completely redraw it using the program's graphics editor. You can even design custom objects and creatures from scratch if you need something not provided in the construction set.

It is unlikely, however, that you will need to create anything on your own, since Adventure Construction Set provides almost every conceivable type of creature, weapon, door, terrain, armor, treasure and space that you will need.

In an adventure game, spaces are one of the most useful props available. They can be used as invisible barriers; they can invoke spells of your choosing; they can be designed to bar passage to all who are carrying or not carrying a certain magical item; they can even hide items from the view of a casual adventurer.

The adventures that can be created with the program begin with a world map, which can contain up to 16 regions. Each region is composed of up to 15 rooms. A single region can also contain up to 16 different creatures and over 500 objects.

Although Adventure Construction Set does simplify the creation process considerably with its joystick-controlled menus and time-saving options (such as "Let Adventure Construction Set Finish Your Adventure"), building a first-rate adventure will still require a lot of planning and hard work. Also, before you can construct an adventure, you must create your own adventure disk. This can take up to 20 minutes and requires several disk swaps. To copy your newly created adventure involves roughly the same amount of drive time.

If you have any doubt, however, that the program is worthwhile, simply give Rivers of Light a try. This adventure, included on the disk and created by Adventure Construction Set, is the story of a search for eternal life in ancient Egypt. It's an enjoyable adventure, full of magic, challenging

enemies and intriguing puzzles. It should convince you. (*Electronic Arts, 2755 Campus Drive, San Mateo, CA 94403. C-64/\$50 disk.*)

Team-Mate **A**

Win the Productivity Game with this Integrated Package

Tri Micro's existing business programs work so well that the need for any significant improvements would seem unlikely. However, Tri Micro has created a fully integrated single-disk system, called Team-Mate, that just might top them all.

Team-Mate allows programs for word processing, spreadsheet design, databases and business graphics to share a common data format and disk. It quickly produces the kind of text and graphics displays that would take hours of labor with ordinary integrated software packages.

Team-Mate's main menu offers two choices: Trilogy, which is a combination word processor, spreadsheet and database program, and Graph Plus, which is a business graphics program.

Trilogy allows you to design personalized letters and files with as much creativity as your imagination will allow. I found the word processor to be much improved over Tri Micro's The Write File. What sets it apart from most others is the option to add data to your text from either a database or spreadsheet program, as well as to incorporate graphics displays into your printouts.

The spreadsheet program in Trilogy contains 850 cells for numbers, text, formulas and file commands. Entering data into a spreadsheet cell is quite simple, even for inexperienced users. The Text mode is especially useful, as it allows you to label a cell that contains numeric data. This permits rapid access to the cell by simply calling up the cell name.

An especially innovative feature of the spreadsheet is a windowing

command that splits the screen and permits you to view the word processing text and the spreadsheet simultaneously.

File Manager, the database program in Trilogy, is also cleverly integrated with the word processor. You can use the database to save records to disk, and locate those records by sorting them. You can access and edit your records with a few simple commands that will update and resave them.

The most useful feature of File Manager is its ability to merge individual database fields, or entire records, into the text of the word processor. This simplifies the printing of mailing lists and form letters that might require information from your database.

Graph Plus, Team-Mate's business graphics program, is fully integrated with the word processing program. The hardcopies you produce with Team-Mate can contain pie charts, bar charts and line graphs. There are two screen windows in Graph Plus:

a graphics window and a data-editing window. There is a full set of special commands used by the editing window for labeling your charts and graphs. You can also design your own graphics displays.

The commands in the editing window permit you to manually or automatically scale your graphics with your step values. Spreadsheet data can be automatically read into your graphs, saving you the time and effort of entering spreadsheet data manually. Such a graphic representation of data greatly complements a spreadsheet.

Team-Mate's integrated design has resulted in a high-performance program that Commodore users will discover to be one of the best available. Tri Micro has created a new set of standards for software integration that other manufacturers will surely want to match. (Tri Micro, 14072 Stratton Way, Santa Ana, CA 92705. C-64/ \$49.95 disk.)

The World's Greatest Baseball Game

C

This Sports-Simulation Game Offers Plenty of Strategy and Action

The newest kind of sports-simulation game capitalizes on the C-64's calculating abilities and its amazing sound and graphics reproduction. It attempts to combine the statistical realism of board games with the excitement and action of video games.

The World's Greatest Baseball Game is that kind of game. Like its name, its goals are ambitious. According to the instruction manual, it "uses actual players' statistics and your own game-playing ability to determine the outcome of each game."

The game comes on a two-sided disk. One side permits you to maneuver the on-screen players. The second version has players that are controlled by the computer, and your only function is to manage your team.

You can view the complete rosters of the teams with which you have chosen to play. Each player's vital statistics are displayed, as well as a suggested starting lineup and pitcher. You are free to rearrange the batting order or lineup of either team.

Your defensive and offensive options are limited, and, except for those rare occasions when you'll want to use a relief pitcher or pinch-hitter, playing the statistical version of the game entails little more than pressing one key to release a pitch and another to reset the game for the next pitch. Each pitch results in one complete play.

The player-controlled game requires you to work a lot harder. You can either play against the computer or another person. Unlike the statistical game, which uses only the keyboard, this game requires a joystick.

In an effort to give you as much control over the on-screen action as possible, the game demands exten-

sive joystick jockeying. You use the joystick and fire-button to do all of the following: pitch the ball, as well as determine its direction and velocity; return the ball to the pitcher; hit the ball; steal a base; move any of the fielders; and throw the ball from one fielder to another.

I found play-action very difficult to master, and the on-screen graphics only mediocre, as the figures neither move nor look much like real baseball players.

One of the great lures of this sports-simulation game is that it permits you to use real major-league stars. In doing so, you'd expect them to perform as they would in real life. This, of course, cannot happen consistently in the player-controlled version of the game, since your ability to maneuver the joystick determines how each player will perform.

Another blow to The World's Greatest Baseball Game's realism is its presentation of every pitcher and batter as right-handed. Didn't the game's creators realize the importance of things such as lefty-righty matchups? In their aim for realism, these kinds of things should have been taken into consideration.

Perhaps this game's problems stem from its attempt to do too much; as a result, it doesn't do enough. The statistical game might prove to be boring to play if you're not particularly interested in all the intricacies of the strategy; and the player-controlled game, in attempting to provide you with some fast action, becomes very complicated. I'm not sure that either version of the game is capable of accurately reflecting the outcome of on-screen player matchups.

Epyx should be admired for going for a grand slam when creating this game. You'll find some strategy and action here, but unfortunately, in trying too hard to accurately capture these two very different aspects of the game of baseball, the program seems to fall short in both categories. (Epyx, Inc., 1043 Kiel Court, Sunnyvale, CA 94089. C-64/\$29.95 disk.)

The Master Handicapper™

Series by Professor Jones

EVALUATES FROM RACING FORM!

Age	Gender	Post (Today)
Class	Jockey (Today)	Post (Last)
Condition	Jockey (Last)	Speed
Consistency	Length	Trainer
Earnings	Time of Year	Workouts

And gives you GRAPHIC REPRESENTATION of finish

PROGRAM

GLD. Thoroughbred "Gold" Edition™
A "Full" featured thoroughbred analysis designed for the professional and serious novice. **\$159.95 complete**

EGLD. Enhanced "Gold" Edition™
"Gold" Edition with complete Master Bettor™ system integrated onto the same disk. This powerful program will transfer all horses and scores to the bet analysis with a "single keystroke."
(Master Bettor™ included) **\$199.95 complete**

GLTD. Limited "Gold"™
Enables Professional Handicappers to assign specific values to the racing variables "they" feel are important.

PROFESSIONAL HANDICAPPING SYSTEMS

%	%	%
Age 5	Consistency 15	Speed 10
Class 15	Jockey 15	Workouts 0
Condition 10	Trainer 5	Time of Year 0
Earnings 5	Post 10	Consistency 5
100%	Is Everything OK (Y/N)	

Create program weight based on a particular track and fine tune it for maximum win percentage. This program is designed for "ease of use". The user needs no programming experience.

(contains Integrated Bettor™) **\$299.95 complete**

GD. Gold Dog Analysis™

The only professional dog handicapper on the market, includes:

- 1) Speed
- 2) Post Today
- 3) Kennel
- 4) Post Last
- 5) Distance
- 6) Condition
- 7) Running Style
- 8) Weight
- 9) All new internal weighting
- 10) NEW class indicator

If you are near a greyhound track, you can't afford not to use this program. **\$149.95 complete**

(with integrated Master Bettor™) **\$199.95**

Limited Dog™ **\$299.95**

MHH. Master Harness Handicapper™

Professional software designed to provide a thorough analysis of all trotter and pacer races in North America and Canada. Features:

- | | | |
|-----------------|------------------|-------------------|
| Class | Post Positions | Time Finish |
| Driver | Track Conditions | Time Last Quarter |
| Days Since Last | Trainer | Track Rating |
| Gender | Time 1/4 | Temp Allowance |

\$159.95 complete w/integrated Master Bettor™ **\$199.95**

PPX. Professor Jones' Football Predictor, Prof. Plix™

Complete Football Analysis with Data-Base.

- 1) Overlays
- 2) Point Spreads
- 3) "Super Plays"
- 4) "Over/Under" bets
- 5) Data Base Stats
- 6) Holds "100" teams

Highest percentage of winners 1983 **\$39.95 complete**

\$99.95 with Data Base Management

NBA. Basketball™

This data base managed analysis will provide the user with "ALL" betting situations while storing relevant information on the disk.

\$99.95 complete w/Manual **\$129.95** NBA/College Version

LOT. LOTTERY ANALYSIS™

Statistical comparison program designed to detect subtle patterns in winning lottery numbers.

\$79.95 complete w/Manual **\$99.95** with Lotto

REPAIRS

Q: My Commodore 64 seems to lock up about five minutes after I turn it on. If I turn it off for a few minutes, it will work for a few minutes before the problem appears again. Do you know what could be causing this problem?

**John Allison
Rockville, MO**

A: Heat. I receive letters like yours several times a week, and, in most cases, the culprit appears to be an overheating power supply. As a general rule, if a 64 fails anywhere from five minutes to a few hours after being turned on, the problem is heat-related, and the power supply should be checked first.

If the red power light on the top of the keyboard dims or goes out, the power supply is probably at fault. But

even if the light is on normally, the power supply could still be inadequate. The way to be sure is to borrow a different power supply and try it. If the problem goes away, your power supply will have to be fixed or replaced.

Since this is such a common problem, let me make a couple of suggestions. First, be sure your power supply is plugged in properly; on some 64s, it's possible to force its connector in the wrong way. On most units, the dimple in the side of the connector should face up when plugging in.

Second, keep your power supply in an open area. It needs ventilation, because it is in a sealed case and generates a lot of heat.

Third, try to minimize the number of add-ons you plug into a 64 using the standard power supply, and be sure their connectors are on properly.

Fourth, if your power supply fails, try to replace it with one of the repairable or oversized power supplies now being offered by various companies.

Q: I'm having a problem with joystick port 2 in my 64. I get no response from the joystick on it, even though the joystick works in port 1. Problems running programs are also evident. This just happened recently. What is the cause, and have you any tips on preventing it from happening again?

**Barry Gray
El Paso, TX**

A: Both joyports are controlled by the 6526 CIA chip at U1 on your 64's circuit board. Most likely, it has been

blown by plugging in the joystick while the computer was turned on. (We all do that, but the chip isn't buffered, so sometimes it doesn't work.)

You can probably fix the problem by replacing U1. You'll find it soldered in place, but add a socket when replacing it, so you'll never have to unsolder it again. Radio Shack has a good cheap desoldering iron, but since 6526 chips are hard to locate, you may still prefer to leave the repair to your dealer.

To avoid future occurrences, plug in your joystick with the computer off. You might want to buy two joysticks and leave them in place all the time.

Q: I have a 1525 printer that doesn't pull labels through. Commodore sent me instructions on adjusting the printer to let labels move through, and I tried three times to adjust it, with no luck. Could you give me better instructions on adjusting the printer or, better yet, the name and address of a company whose labels will run on a 1525?

**John Gehrke
Brooklyn, NY**

A: The 1525 isn't noted for its paper-pulling ability, but, before giving up, take your instructions to a Commodore dealer (such as Meizner Business Systems in your area), and let them try to make the adjustment. You might also try the new transparent plastic labels offered by Quill Corp. (100 S. Schelter, Lincolnshire, IL) and others. They are thinner and more flexible than paper labels.

If anyone else would like the Com-

modore instructions, they are labeled "Adjustment for feeding of double labels in 1525 printer." If you can't get them from Commodore, send me a #10 self-addressed stamped envelope and 50 cents for copying, and I'll send you a copy.

PROGRAMMING

Q: Some programs appear to use lengthy variables (for example, DELTA = 1). I thought variables could only be two characters. Does the computer disregard all after the first two?

Paul Arneith
Sandy Hook, CT

A: That's correct. PET Basic variables may be any practical length, but only the first two characters are significant. One other limitation is that no part of a variable name may read as a Basic keyword. The value of using long names is that they can be more descriptive. In the example you cite, Delta is very descriptive of the function of that variable in a flight simulator, whereas the equivalent DE = 1 would require a Remark statement for clarity each time it is used.

Q: I would like to sell, as a plug-in cartridge, a program that I have written. How can I get it mass-produced? Should I have the program copyrighted? If so, how?

Curtis Finke
Evansville, IN

A: Several companies will gladly sell you EPROM burners to convert your program into ROM form. Two with which I am familiar are the Prom Queen from Gloucester Computers (1 Blackburn Center, Gloucester, MA), and the Promenade from Jason Ranheim (580 Parrott, San Jose, CA). To complete the process, you will then need cartridge shells. These are available from at least two companies: Eastern House Software (3239 Linda, Winston-Salem, NC) and Richvale Telecommunications (10610 Bayview, Richmond Hill, Ontario, Canada). These companies or others like them may also be willing

to burn the needed ROMs for you, saving you the need to have an EPROM burner.

Recent court decisions suggest ROM-based programs can now be copyrighted, so long as they claim to be so. Therefore, be sure to include a copyright notice, such as "Copyright 1985 Curtis Finke, all rights reserved" both in the code stored in the ROM and on the outside of the ROM and cartridge. That should be enough to copyright your program. However, you can gain some advantages in a lawsuit to enforce your copyright if the copyright has been registered at the U.S. Copyright Office in Washington, D.C. The cost is small, but contact the copyright office for current details.

Q: I would like to know how I could make a figure appear on the screen, say, a small man, and make it walk across the screen, controlled by joysticks. I would also like to be able to make a ladder and have the figure climb it. And one more thing: I would like to make him shoot by pushing the fire-button, and have the shots affect certain objects on the screen rather than others.

Could you send a short program that would illustrate such an action? Even a recommendation for a book would be deeply appreciated.

Mike Martin
Wilmington, DE

A: You need to learn about sprites, also known as movable object blocks. They are one of the most powerful features of the 64, and can be used to do everything you ask, but not in a program short enough to print here.

I've reviewed some books that might help you—*Sprite Graphics for the Commodore 64*, from Prentice-Hall/Micro Text (Englewood Cliffs, NJ), *The Graphics Book for the Commodore 64*, from Abacus Software (Grand Rapids, MI) and *Graphics for the Commodore 64 Computer*, from Spectrum Books/Prentice-Hall (Englewood Cliffs, NJ).

Also, consider using a sprite-making program, such as Sprite Master, from Access Software (Salt Lake City,

UT), or Spwriter, from the October 1984 issue of *RUN*. Such programs take much of the drudgery out of using sprites.

Q: I connected a reset switch to my 64. However, it wipes out all memory, programs and data, and it returns to the start-up screen, as though I'd just turned the power switch off and on. Can you help?

Bob Watson
Houston, TX

A: Although the start-up screen appears and nothing can easily be listed, all Basic memory locations, except a few pointers, remain intact after using a reset button. The trick is restoring those pointers. If you have a machine language monitor in memory, that will be a fairly easy process; simply use the SYS command to access it. It will be where it was before the reset. From the monitor, you can restore a VIC or 64 Basic program by changing locations \$2D-\$2E to point to the first location after the three \$00 bytes that mark the end of Basic programs. With a bit of investigation, you may also be able to restore your variable pointers.

Q: How can I reset pointers to salvage a program I spent 12 hours on? I have a machine language monitor, so I can see the program in memory. If I try to list it, it starts out all right, but later looks like garbage. I tried to reenter each line that looked all right, but when I got to certain spots, the screen just "freaked out," turned black and made little shapes in the corner. What is going on, and can I salvage some of this program by resetting something?

Gil Doubrava
San Antonio, TX

A: Using the machine language monitor, you might want to try resetting link pointers to each line that lists incorrectly. (In Basic, the first two bytes of each line make up a pointer to the address of the next line; low byte first.) You may also uncover, within a troublesome line, an altered byte that can be changed

to correct the program, again from within the monitor. However, it sounds like your program is beyond such help. You might find it takes longer to repair than to retype.

If this is the only program that fails, I expect the problem is that it includes a faulty Poke statement, and that you ran it before saving a copy to tape or disk. When writing a program, I save my work every twenty minutes, using a different filename each time. When I finish, I save programs one more time before running them. That way, I almost never lose a program.

HARDWARE

Q: I am looking for a colored replacement ribbon for my 801 printer. Where can I purchase one?

Steve Mikolajewski
Saginaw, MI

A: Though I haven't tested them, such ribbons are advertised by Pixelite Computer Products, authors of the excellent and popular Print Shop program, sold by Broderbund. Pixelite is located at 2000 Center St., Suite 100-1345, Berkeley, CA 94704 (415-527-6400). They offer red, green, blue, purple and brown ribbons for the 801, at \$14 each, and for other popular printers at prices ranging from \$7 to \$13.

Q: I own a VIC and my friend owns an Atari 800. We both have a cassette recorder. Do you know how I can load his programs?

Rich Pasela
Strongsville, OH

A: Sorry, but you can't. Though both the VIC and Atari use the same cassettes, their data storage formats are quite different and incompatible.

Q: Please tell me if it is a good idea to get a modem and what I can do with one.

Sean Bergman
Veradale, WA

A: The key factor in deciding whether or not to get a modem is whether or not you can afford its benefits. CompuServe, for example, is a veritable cornucopia of information, but, where I live, using it costs me \$20 an hour, so I tend to check in quickly once a week when the long-distance rates are lowest.

A friend in a larger town 30 miles away calls CompuServe at the same number I do, but for him it's a local call. Many towns, including his, also have active telephone bulletin board systems that people can call for free in their local dialing area.

As for what you can do with a modem, I'll cite one recent example. The day Commodore's new C-128 computer was announced, complete details about it were available to anyone interested, via CompuServe, within a half hour after the news conference that announced it. Although most weeks the news isn't as exciting as that, regular users of information networks and bulletin board systems tend to hear about news in the industry before most others.

One other important advantage offered by a modem is that it allows you to exchange files with users of other brands of computers, something you normally can't do via cassette or disk.

For more information on what you can do with a modem, be sure to follow *RUN's* series on telecommunications, which began in the May issue.

SOFTWARE

Q: I own a Cardco Write Now! word processor and think it is great, but could you explain why I get double or triple spaces in between words when there are only single spaces on my television screen?

Joe Rambaldi
Belleville, NJ

TRIMICRO

A: Those extra spaces are put there by your word processor to make the right margin on your letters as smooth as the left margin. This process, called right-justification, is meant to give you even margins, thus improving the appearance of your printout.

Q: I am looking for software that may be useful in college algebra, physics and trigonometry. I am particularly looking for programs that will analyze problems, showing complete solutions, rather than just the answers.

Henry Dove
Box 396
Atchison, KS 66002

A: I've included your address, because Commodore programs suitable for use in college are embarrassingly scarce. The only college-level program I can recommend is CBS Software's Quadratic Equations, from their "Success with Math" series. It is an excellent program and does what you ask.

One other program worth mentioning for college use is Commodore's Sky Travel, which is a fully functional planetarium. I consider it a must for astronomy classes at any grade level. It is so well done that such classes can justify buying a 64 just to use it.

Q: I want to purchase some foreign language software written and marketed in West Germany. Can you tell me if the software will run directly on my equipment here in the States without any electrical modification?

Brooks Haderlie
Columbus, OH

A: Yes, it will work just fine here. I've received disks and cassettes from all over the world and have had no trouble using any of them on U.S. equipment.

Q: Where can I buy Plus Graph for my Plus/4? When a local company

tried to call Tri Micro, the phone had been disconnected.

Judy Maxwell
Louisville, KY

A: I've just this week received a press release from Tri Micro, listing a new address and phone number. Try contacting them at: International Tri Micro, 14072 Stratton Way, Santa Ana, CA 92705 (714-832-6707).

Any Plus/4 owners with questions about the "3+1" application ROM built into the Plus/4 may also want to contact Tri Micro, since they developed it for Commodore.

Q: What is public domain software and how do people get hold of it?

Steve Trelut
Greeley, CO

A: Public domain programs are software donated by programmers for the use of other computerists.

DELUXE RS232 INTERFACE

Whether you want to communicate with a modem, serial printer, another computer, or any other RS232 device, the Deluxe RS232 Interface is the correct choice. Any comparison will show that it is best Commodore compatible RS232 interface available for any price! The Deluxe RS232 Interface is the culmination of 3 years of working with Commodore users who need an RS232 Interface. It supports all standard RS232 connections (2-8, 12, 20, 22) including Ring Detect and Hi Speed Indicator. Four switches in the RS232 cover allow you to set the unit for virtually any standard RS232 configuration. The unit includes a 3 foot cable with either a male or female DB25 connector (specify which). RS232 plus and minus voltages. Users Manual includes a type-in Basic terminal program, basic program transfer routine, and other examples. Add \$2.00 for shipping. Suggested retail \$44.95

PRINTMASTER/S (RS232)

This is an RS232 version of our famous Printmaster/+G. It is a serial bus printer interface providing full RS232 signals for an RS232 printer. Supports pins 2-8, 20. Select 300, 600, 1200, 2400, word, and parity. DTR or Xon-Xoff handshake. Supports dot graphics and characters on RS232 versions of Epson, Oki, Gonila, NEC, and more. Includes all Printmaster Intellifeatures. Includes 3 ft cable with a male or female connector (specify which). Cassette or external power. Add \$2.50 for shipping. Suggested retail \$139.95

DEALERS CALL US!

P.O. BOX 43-DEPT.R7-MERCER IS., WA 98040

The programmers are not interested in marketing their software commercially. It's free, except for a nominal charge for the media on which the program is stored, as well as packaging and shipping costs. There are thousands of such programs, including some of the best-known utilities, such as Micromon.

The easiest way to get such software is through a Commodore user's group. Most now have dozens, if not hundreds, of disks. The Toronto, Ontario, PET User's Group is special in this regard. It is the largest user's group in the world, with a correspondingly huge library that is nonetheless reasonably well organized and documented. It accepts associate memberships from anywhere and ships disks of public domain programs all around the world.

If you need a public domain program mentioned in this column and can't get it more cheaply elsewhere, I have it and will send it anywhere on disk for \$15, U.S. currency.

Commodore's Service Network

Local service is now available to Commodore computer owners through the creation of a national network of service centers. Commodore has provided RUN with a current list of service centers, but more are being added almost daily. In the next three issues, we will be publishing the list of service centers categorized by state for easy reference. A call to the toll-free Commodore support hot line (800-247-9000) will give you the most up-to-date information about service and dealer locations.

Attention, dealers: If we haven't included your name, send in the name of your store, along with the address and telephone number, to RUN, 80 Pine St., Peterborough, NH 03458. We'll update the list in subsequent issues.

RUN's Magical 13th Issue

Thanks to wizard Lou Sander for the incredible "lucky 13th" Special Issue of *RUN*! This has got to be one of the most valuable compendiums of truly useful tips to (yet) be accumulated and published for the C-64. Lou Sander would have been proud of the "fight" at the newsstand for the last copy of the magazine. Furthermore, the computer store was out of both the Special Issue and the regular issue, which sold out in one day!

Needless to say... I won the battle at the newsstand. I have sent in my subscription, so I won't have to fight the crowds again.

A note of thanks to Lou for also indexing all 512 tricks. I have used the index many times to relocate tricks for my friends who weren't lucky enough to get their very own copies.

David Kemmer
Oronoco, MN

Let me congratulate you on your Special Issue and its year's worth of digital prestidigitation—it was terrific!

Dominick Cascio
Forest Hills, NY

Magic is my favorite part of *RUN*. The 1985 Special Issue was amazing and well worth the wait for delivery.

David Stumme
Bellport, NY

I found your Special Issue well worth the money. Why, the wall chart alone was worth the \$3.95. Keep up the good work.

J.H. Langston
Newport News, VA

Okimate 10 Is Okay!

Regarding comments published on the Okimate 10 printer in your March Mail *RUN*... I, too, have found this to be a very good printer, particularly when used with good thermal paper. It prints better on thermal paper than on thermal transfer paper. The solid areas are indeed solid, much more so than that of most dot-matrix printers.

However, good-quality thermal paper can be *very* hard to find. The type I am using, after great efforts in searching, is the IBM PC Compact Printer Paper, part no. 1503926. It comes in packs of 250 8½ × 11 fanfold pages.

Sam Wang
Clemson, SC

For more information on the Okimate 10, see p. 115 of last month's issue.

Graph Maker 64

Your April 1985 issue contained a program called Graph Maker 64, by Doug Smoak. I would like to compliment you and Mr. Smoak for making available a most useful program for anyone who has need to utilize graphs for business or personal use. The end result is most professional, and you certainly can't beat the price.

For those who wish it, Mr. Smoak can furnish a two-line addition to the program, allowing you to leave a vertical space between the graphed columns. This greatly assists visibility on a black-and-white printout.

Edmund J. Korber
Ebensburg, PA

A Plus/4 Enthusiast

I am the proud owner of a nifty-swifty, handy-dandy Plus/4. I am also proud to say that I was one of the first people in my city to own one, and, for the price, I wouldn't own anything else.

I have enjoyed "Spotlight on Productivity," your informative and comprehensive series on the Plus/4's built-in programs (*RUN*, December 1984, February, April and May 1985). You mentioned you were going to run an article on TEDMON, the Plus/4's built-in machine language monitor. If so, I hope it will be written in the same easy-to-understand English as your previous Plus/4 articles.

I was excited to see in your March issue that you had taken the time to convert some programs from C-64 to Plus/4 (specifically the business programs). I hope you will continue to do this for readers in future issues.

Scott C. Burg
Phoenix, AZ

See p. 76 in this issue for our article on TEDMON. We appreciate the many letters we've received from Plus/4 owners about this series, and we will continue coverage of the Plus/4 on a monthly basis, with articles by various authors. We will also continue to run Plus/4 program listings.

Editors

Commodore Service Improving

In regard to your letter "Where's Commodore's Service?" (*RUN*, March 1985), I have a happier story. My C-64 and 1541 developed annoying losses of data when I was running data programs that required continual use of the drive. Additionally, my power supply was getting hot enough to use as a hot plate! Only a fan directed at the power supply and disk drive could cool things down enough for me to safely get through new data entries.

One evening, as I sat at the keyboard huddled underneath a blanket in an attempt to stay warm while the fan blasted at me and the drive during data entries, I thought the entire scene was rather hilarious.

I brought up my word processing program and drafted a letter to Commodore suggesting they find some way to cool down their drives and explaining the rather unorthodox situation I was experiencing between my fan and blanket and Commodore equipment.

Within a week, I received a letter from Commodore. I was told a new power supply was being shipped free of charge and was invited to send in my disk drive for examination and free repair if necessary—my only charge being shipping expenses one way. The power supply arrived soon after, and the system has worked perfectly since then, with no need to send in the drive. I thought Commodore was pretty terrific and wrote them to that effect.

A suggestion to other users: Read your local newspaper's classified advertising about computers. I have found several independent computer stores that will service Commodore equipment. Even more importantly, Commodore has recently announced the establishment of a national service network with nearly 1300 outlets. This should take the heat off Commodore and clearly demonstrate that they are indeed supporting their customers.

ROCKNEY WORK STATION

**Communications Software for Commodore 64
with FREE Rockney Disk Utilities!!!**

If you are serious about terminal programs and communications, you need this package. Very simply, this is the "professional model." It's the only communications software for C64 that is recommended by the "World Leader in Information Services." Response has been absolutely tremendous. Thank you all!! Order now and we will enclose a FREE COPY of our hot-selling Rockney Disk Utilities (a \$24.95 value).

You Get:

- On-line or off-line printing of local and host files.
- Down-loading and up-loading of sequential files the size of the disk.
- XMODEM protocol for error-free transmission of BASIC programs, machine language programs, and sequential files.
- Both ASCII and PET ASCII character sets. ASCII character set can be user defined.
- Fully adjustable communications parameters for parity, data bits, stop bits, echo, and speed.
- Full implementation of flow control. X-on/X-off characters can be user defined.
- Spool file to record entire session on disk.
- Special security masking of sensitive data and passwords.
- Accurate system clock to record connect time.
- Program is 100% machine language with error-free 1200 baud operation.
- Multi-colored displays with all colors user defined.
- Full support for up to four 1541 disk drives, all Commodore printers, and the 1520 plotter. (Yes, you can print on-line with the 1520!)
- Autodial feature for the Commodore 1650 and 1660 Automodems and Hayes Smartmodem.
- Full implementation of the ASCII control codes.
- Key defined MACROS, allow user to define commands, so repetitious tasks can be done with single key-strokes.
- Full DOS support. All DOS commands can be done from within the program, including Display B&M.
- The program is not copy-protected, but it is copyrighted. No banging of the disk drives! You may make as many copies as you like for your own use.

ROCKNEY WORK STATION comes with a complete users guide containing many tips and examples of use.

Please send me the Rockney Work Station and my free copy of Rockney Disk Utilities.

Productivity Trio

Softsync, Inc. (162 Madison Ave., New York, NY 10016) has released Trio, an integrated package for the Commodore 64.

The package contains a word processor, spreadsheet and database program, all of which are designed to work together. Trio is available on disk for \$69.95.

Check Reader Service number 400.

At the Races

Thoroughbred & Harness Racing Handicapping is a horse-racing analysis package for the C-64 and VIC-20. Three programs are included: Thoroughbred Racing Analysis, Harness Racing Analysis, and Bet Return Analysis.

Available on tape or disk, the package retails for \$29.95. Software Exchange, 2681 Peterboro Road, PO Box 5382, W. Bloomfield, MI 48033.

Check Reader Service number 401.

Wishbringer

Infocom (55 Wheeler St., Cambridge, MA 02138) has released Wishbringer, an interactive fiction game that is geared toward the introductory-level player.

You are a mail clerk in a small town. You set off to deliver a mysterious envelope to the Olde Magick

Shoppe and find that you must do battle with Evil One and her Boot Patrol. Wishbringer is on disk for the C-64. Retail price is \$34.95.

Check Reader Service number 402.

C Power Compiler

Pro-Line Software (755 The Queensway East, Unit 8, Mississauga, Ontario, Canada L4Y 4C5) has released C Power, a compiler that uses the C language.

C Power compiles directly to 6510 machine code, thus avoiding the need for any intermediate step. It is available on disk for the C-64 and retails for \$99.95.

Check Reader Service number 403.

Easy-Link

Easy-Link is a serial interface from Progressive Peripherals & Software (2186 South Holly, Denver, CO 80222).

The device is 100% transparent, completely bi-directional and comes with its own power supply. Retail price is \$99.95.

Check Reader Service number 404.

Teacher's Helper

Genesis 2 is a lesson-authoring system that allows teachers or parents to create computer exercises in a question-and-answer format. These

exercises can be printed out and saved on tape or disk for future use.

The program retails for \$20. Greenwood Software, 1214 Washington, The Dalles, OR 97058.

Check Reader Service number 405.

Wurble

Sher-Tek Systems (PO Box 6808, Station J, Ottawa, Ontario, Canada K2A 3Z4) has released Wurble, a game for the C-64.

Designed for ages ten and older, the game encourages the use of spelling and vocabulary skills, as you compete to form words on the computer's screen. Retail price is \$14.85.

Check Reader Service number 406.

Jogger's Log

Jogger is a runner's log that allows you to record and update your goals and progress as a runner. You can print out high-resolution graphics plots of your weekly, monthly and annual statistics.

It is available on disk for the C-64. Parsons Software, 1920 Briar Meadow, Arlington, TX 76014. The retail price is \$29.

Check Reader Service number 407.

Trivia Flight

Mark of the Falcon (3621 Goodell Lane, Fort Collins, CO 80526) has

released Trivia Flight, a game for the C-64.

The package contains three disks and offers more than 4000 trivia questions. Additional question disks will be released every two months. Retail price is \$26.95.

Check Reader Service number 408.

■ **C-64 Disassembler**

Schnedler Systems (1501 N. Ivanhoe St., Arlington, VA 22205) has released Symbol Master, a symbolic disassembler for the C-64.

This package aims to pick up where simple disassemblers leave off, in allowing you to see the overall structure of a program. Available on disk, retail price is \$49.95.

Check Reader Service number 409.

■ **Program with Chipwits**

Chipwits is a game that aims to introduce the basic concepts of computer programming, using 16 robots that can be programmed to move, see, smell and grab onto objects.

Available on disk for the C-64, Chipwits retails for about \$34. Epyx, Inc., 1043 Keil Court, Sunnyvale, CA 94089.

Check Reader Service number 410.

■ **Copy-Protected Disks**

Glenco Engineering, Inc. (3920 Ridge Ave., Arlington Heights, IL 60004) has released Safeguard 64 disks for the C-64.

The disks are designed to prevent unauthorized duplication of programs, through the use of a magnetic mark that is on each disk. Retail price is between \$1 and \$5.50 each.

Check Reader Service number 411.

■ **Crusade in Europe**

Crusade in Europe is the first release in the Command Series for the C-64, from MicroProse Software

(10616 Beaver Dam Road, Hunt Valley, MD 21030).

This is a simulation of the American and British struggle against Germany, from the D-Day invasion to the Battle of the Bulge. Available on disk, retail price is \$39.95.

Check Reader Service number 414.

■ **Best Business Management**

Business Electronics Software & Technology (PO Box 852, McMinnville, OR 97128) has introduced a set of business-management programs for the C-64.

They are B.E.S.T. Accounts Receivable, B.E.S.T. Accounts Payable, B.E.S.T. Inventory and B.E.S.T. General Ledger.

Check Reader Service number 412.

■ **Mach 5**

Access Software (925 East 900 South, Salt Lake City, UT 84105) has released Mach 5, a disk speed-up enhancement package for the C-64.

It loads disk-based programs at a faster rate of speed, adds 4K of memory to Basic, and is 100% transparent. Included on the cartridge is a disk-organizer program. Retail price is \$34.95.

Check Reader Service number 413.

■ **Build a Book About You**

Build a Book About You is a package that allows children between the ages of two and 12 to design, print out and bind their own storybook. Included in the package are a disk containing four stories, two illustrated page sets, and two hard-bound covers.

Retail price is \$39.95. Scarborough Systems, 25 North Broadway, Tarrytown, NY 10591.

Check Reader Service number 415.

■ **Virtuoso**

TCO Software Co. (PO Box 81504, Fairbanks, AK 99708) has released Virtuoso, a music program for the Commodore 64.

It allows you to write and play long pieces of music in up to three voices. A second version, Virtuoso+, will print out your musical compositions. Both are available on disk. Virtuoso retails for \$39.95, Virtuoso+ for \$45.

Check Reader Service number 416.

■ **One on One in World War II**

Computer Ambush is a World War II strategy game for the C-64, from Strategic Simulations (883 Stierlin Road, Bldg. A-200, Mountain View, CA 94043).

You will experience the challenge of one-on-one combat in a small French town. Available on disk, retail price is \$59.95.

Check Reader Service number 417.

■ **Pascal for the Pro**

Kyan Software (1850 Union St. #183, San Francisco, CA 94123) has released Advanced Kyan Pascal.

The package offers such extensions as enhanced graphics, string handling and random-access files. The compiler runs approximately 30 times faster than Basic. Available on disk for the C-64, retail price is \$69.95.

Check Reader Service number 418.

Commodore-Compatible Printer

The SG-10C is a dot-matrix printer with an option for near letter-quality print, from Star Micronics (200 Park Ave., New York, NY 10166).

It has a built-in Commodore interface, and offers a print speed of 120 cps in the Draft mode, and 30 cps in the Near-letter-quality mode. Retail price is \$299.

Check Reader Service number 419.

Self-Booting Software

ABL-64 is an automatic loader cartridge for the C-64. The device will reload and run a program in the event of a power failure, resuming where the program left off before the failure.

Retail price is \$39.95. Input Systems, 15600 Palmetto Lake Drive, Miami, FL 33157.

Check Reader Service number 420.

Team-Mate

Tri Micro (14072 Stratton Way, Santa Ana, CA 92705) has released Team-Mate, an integrated package for the C-64.

comodore computers. The device allows parallel graphics printers to emulate Commodore printers.

Retail price is \$69.95. Apricorn, 7050 Convoy Court, San Diego, CA 92111.

Check Reader Service number 422.

Real Estate Investor

Jance Associates (PO Box 234, East Texas, PA 18046) has released Real Estate Investor for the C-64.

The program is designed to aid in the buying of a home or other real estate, and explores such areas as mortgage payments, depreciation and the possible consequences of your purchase. Available on tape or disk, retail price is \$35.

Check Reader Service number 425.

You can move freely among the word processor, database and spreadsheet programs contained on the disk. A business graphics program is also included. See review in this month's Software Gallery. Retail price is \$49.95.

Check Reader Service number 421.

Parallel Printer Interface

The ApriCord CD is a printer interface that supports the printing capabilities of the entire line of Com-

A Master of Print

The Printmaster/+G parallel printer interface is compatible with the C-64, the Plus/4 and the C-128, and offers emulation of the Commodore printers. Full graphics and graphics characters are supported.

Retail price is \$119.95. Omnitronix, PO Box 43, Mercer Island, WA 98040.

Payment for the use of any unsolicited material will be made upon acceptance. All contributions and editorial correspondence (typed and double-spaced, please) should be directed to RUN Editorial Offices, 80 Pine Street, Peterborough, NH 03458; telephone: 603-924-9471. **Advertising Inquiries** should be directed to Advertising Offices, CW Communications/Peterborough, Inc., Elm Street, Peterborough, NH 03458; telephone: 800-441-4403. **Subscription problems, placement orders, renewals or address changes:** Call 1-800-645-9559 or write to RUN, Subscription Department, PO Box 954, Farmingdale, NY 11737. **Problems with advertisers:** Send a description of the problem and your current address to: RUN, Elm Street, Peterborough, NH 03458, ATTN.: Rita B. Rivard, Customer Service Manager, or call 1-800-441-4403.

RUN is a member of the CW Communications/Inc. group, the world's largest publisher of computer-related information. The group publishes 57 computer publications in more than 20 major countries. Nine million people read one or more of the group's publications each month. Members of the group include: Argentina's *Computerworld/Argentina*; Asia's *The Asian Computerworld*; Australia's *Computerworld Australia*, *Australian PC World*, *Macworld* and *Directories*; Brazil's *DataNews* and *MicroMundo*; China's *China Computerworld*; Denmark's *Computerworld/Danmark*, *PC World* and *RUN (Commodore)*; Finland's *Mikro*; France's *Le Monde Informatique*, *Golden (Apple)*, *OPC (IBM)* and *Distributique*; Germany's *Computerwoche*, *Microcomputerwelt*, *PC Welt*, *SoftwareMarkt*, *CW Edition/Seminar*, *Computer Business*, *RUN* and *Apple's*; Italy's *Computerworld Italia* and *PC Magazine*; Japan's *Computerworld Japan*; Mexico's *Computerworld/Mexico* and *CompuMundo*; The Netherlands' *Computer World Benelux* and *PC World Benelux*; Norway's *Computerworld Norge*, *PC World* and *RUN (Commodore)*; Saudi Arabia's *Saudi Computerworld*; Spain's *Computerworld/Espana*, *Microsistemas/PC World* and *Commodore World*; Sweden's *ComputerSweden*, *Mikrodatorn*, and *Svenska PC*; the UK's *Computer Management*, *Computer News*, *PC Business World* and *Computer Business Europe*; Venezuela's *Computerworld Venezuela*; the U.S.' *Computerworld*, *HOT CoCo*, *inCider*, *InfoWorld*, *MacWorld*, *Micro Marketworld*, *PC World*, *RUN*, *73 Magazine*, *80 Micro*, *Focus Publications* and *On Communications*.

How to type listings from RUN

Typing in listings can be difficult enough without having to worry about strange graphics characters, charts or tables. That's why we decided to make it easy to enter listings from RUN by translating everything we thought might be confusing in any program.

When you see something between the curly brackets, all you have to do is press the keys indicated. For example:

- {SHIFT L}—means hold down the shift key and press the L key at the same time.
- {COMD J}—means hold down the Commodore key (it is on the lower left side of the keyboard) and press the J key at the same time.
- {SHIFT CLR}—hold down the shift key and press the CLR/HOME key.
- {HOME}—press the CLR/HOME key without shifting.
- {CTRL 6}—hold down the control key and press the 6 key.
- {FUNCT 2}—function 2 (in this case, you hold down the shift key and press the function 1 key).
- {CRSR UP}{CRSR DN}{CRSR LF}{CRSR RT}—these are the four cursor directions.
- {UP ARROW}—means the arrow key (the one with the pi sign under it).
- {LB.}—the British pound sign (£).
- {PI}—the pi sign key (π); (shift and press the up arrow key).

Our translating program does not designate single spaces between characters. Within quotations, these spaces are often critical to the screen display. Be sure to read the listings closely and include these single spaces as you type in your program.

In some instances, when a large number of characters or spaces are repeated in a listing, we will represent them this way: {22 spaces} or {17 CRSR LFs}.

Print vs Print#

RUN readers should be aware of difficulties that may arise when entering listings that contain the PRINT and PRINT# commands.

These two commands may look very similar, but they are different. If, for example, you use a question mark (?) to abbreviate PRINT in a line such as 10 PRINT#4,A\$, then you're telling the Commodore computer that you're trying to print the variable #4, which is not a legal variable name.

The command PRINT#4 actually means "print to file number 4." You can abbreviate PRINT# by hitting the P key and the shift and R keys at the same time and then entering the file number. But do not abbreviate PRINT# with a question mark.

If you think of PRINT as one command and PRINT# as an entirely different command, then you should have no problems.

Price and performance no other printer interface can touch!

Only CARDCO would dare improve on its own best seller (the +G has far out-sold any other printer interface, and has set the industry standard by which competitors are judged). The G-Wiz is even better — and costs 30% less.* Our 27th major innovation in Commodore accessories has all the +G's features, and more...

Built-In Buffer for More Speed

The G-Wiz buffer dumps high-resolution screens up to 18 times faster than competitive interfaces without buffers. No more waiting! A complex 50-minute printout now takes just 2.5 minutes with the G-Wiz.

Exclusive! Aspect Ratio Selection

Only the G-Wiz matches graphics characters to standard characters on Okidata, Epson, Star

* Actual price may vary according to dealer and region.

Micronics, Prowriter, Smith Corona, C-ITOH, Gorilla Banana, and many other dot matrix printers. Now you can perfectly align high resolution graphics characters within text blocks, or in columns.

CARDCO excellence triumphs again! The G-Wiz is the "best bang for the buck" on the printer interface market today — and it's backed by CARDCO'S exclusive lifetime warranty! G-Wiz: another distant target for the competition to shoot at.

"Thanks for the memory."

INTRODUCING THE COMMODORE 128.™

It's here. And it's going to make a lot of Commodore 64™ owners very happy. A personal computer with a 128K memory and 80-column capability that's still compatible with all the peripherals and over 3,000 programs designed for the Commodore 64.

In fact, the new 128 is almost like getting three computers in one. That's because it can run as a 64, a 128 and in a CP/M™ mode. Or it can even be expanded to a full 512K memory. And that's about as "personalized" as a personal computer can get. It's intelligence that can match your

own versatility. And then, even take it to a higher level.

There's more than a bigger memory.

There are a lot of extra features we didn't forget. Like a handy numeric keypad for data-entry efficiency and accuracy.

An expanded keyboard that puts more commands at your fingertips for easier programming. So you can be a whiz at using more varied graphics and text. Or a musical genius playing full three-part melody in any tempo you set. And there's even a "help" key

that comes to your rescue, listing programming errors on-screen with the error in reverse field.

There's also a new faster disc drive. With a separate "Burst" mode that can transfer up to 3,000 characters per second. Just in case you're a speed demon.

"Thanks for the memory!" You're welcome. And for the expandability. And compatibility. And versatility. And for making it all very affordable. After all, one of the other things that should go into a more intelligent computer is a price that makes sense.
