INTRODUCING...
Four ways to address your software needs.

One's Really Simple.

Fleet System 2™ is so user friendly beginners can start typing documents in minutes! The integrated 90,000 word dictionary is the largest and fastest available on the Commodore 64.

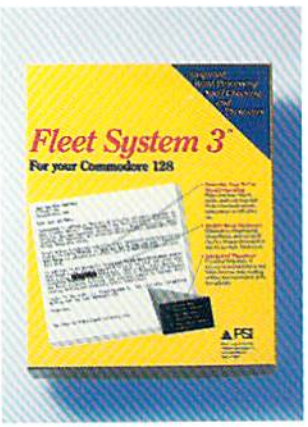
And you can even add an additional 10,000 *"Custom"* words to the dictionary.

Suggested Retail Price: $59.95

One's Really Integrated.

Fleet System 3™ the user friendly software package for the Commodore 128 includes an integrated 90,000 word dictionary, On-Screen Help Windows, a "Preview" function so **"What You See Is What You Get"**. There's also an integrated Thesaurus that provides thousands of synonyms and antonyms and will help improve your writing and vocabulary skills instantly!

Suggested Retail Price: $69.95



One's the Ultimate.

Fleet System 4™ is our all new ultimate, integrated writing tool that works on the Commodore 128 and combines four powerful applications into one package. It has everything you'd find in ***Fleet System 3***™ plus ***Fleet Filer***™, the database that puts information at your fingertips, in seconds!

Suggested Retail Price: $79.95

One's a Creator.

Fleet Filer™ can create anything from invitations to mailing lists. You have up to 5,000 records which can be sorted in ascending or decending order. You can even search according to logical criteria or search string. And we've saved the best for last... You can input and output to ***Fleet System 2***™, ***3***™, and ***4***™ files. *(And with most major word processors).* ***Fleet Filer***™ will work on Commodore 64/128 computers.

Suggested Retail Price: $39.95

Finally, software the way it ought to be.
Buy it and experience what over a quarter of a million Commodore users already believe in.

Things are looking up for game players.

Brace yourself for action, adventure, thrills, and spills.

In *Fist: The Legend Continues,*™ everything's at stake as you chop your way through hundreds of screens meeting evil warriors, mighty Shoguns, and hungry panthers. Marshall all your strength to survive this martial arts adventure.

Uridium™ presents you with the ultimate galactic crisis. As the lone remaining Manta Fighter Jock, you have 15 Dreadnought mother ships to zap before they swipe the mineral resources from the solar system's planets. The line between zapper and zappee is a thin one. So aim well.

Enter the arena of Judo action in *Uchi Mata.*™ Over 400 animation frames will keep you kicking and screaming. The only thing you'll miss are the bruises.

A hyperspatial spherical grand prix awaits you in *Trailblazer.*™ Unless you're faint at heart, you'll have a ball leaping black holes, purple walls, and avoiding the terrible cyan nasty zone.

Keep your laser gun cocked for *Parallax.*™ Mad scientists and their alien cohorts are planning to turn Earth into a big cloud of dust. You've got to mop them up or else.

Let Mindscape hit you with the best games to play. Just remember: when you sit down and start playing, hold on to your seat.

Mindscape

Software that challenges the mind.

In a market full of helicopter simulations like Super Huey II, Gunship, and Infiltrator, it's nice to find a product like ThunderChopper that flies high above the rest!

Colonel Jack Rosenow USAF (Ret.), President of ActionSoft Corp., has the experience to provide all of the helicopter action and strategy you've been looking for! ThunderChopper incorporates the most advanced graphics, flight systems, and game-playing factors to provide a sensational balance of strategy and fun:

- Action-packed animated graphics include real 3D scenery and airborne threats. The competition's graphics just don't compare.
- A sophisticated instrument panel lets you scan all vital information at a glance whether performing combat, exploration or rescue operations. ThunderChopper's advanced instrumentation includes Forward-Looking Infra red, CO2 laser radar, zoom television, and ECM. Armament includes TOW and Stinger missiles, a Hughes Chain Gun, and Zuni rockets.
- Better program and documentation design gets you up flying exciting combat missions in minutes.

As Colonel Jack says: "ThunderChopper is the ultimate in helicopter action and realism. Nothing else even comes close. No other simulation can boast this much fun!"

Manuscripts: *RUN* invites its readers to send contributions in the form of manuscripts with drawings and/or photographs to be considered for possible publication. The procedure for submitting an article is outlined in the *RUN* writer's guidelines, which you can obtain by sending a self-addressed, stamped envelope. All contributions, queries, requests for writer's guidelines and any other editorial correspondence should be directed to *RUN*, Editorial Offices, 80 Elm St., Peterborough, NH 03458; telephone: 603-924-9471.

Advertising inquiries: Send your correspondence to Advertising Offices, CW Communications/Peterborough, Inc., 80 Elm Street, Peterborough, NH 03458; telephone: 800-441-4403.

Subscription problems or address changes: Call 1-800-227-5782 (NY and Canadian residents, 1-800-732-9119) between 9 a.m. and 5 p.m. EST, Monday–Friday, or write to *RUN*, Subscription Department, PO Box 954, Farmingdale, NY 11737.

Problems with advertisers: Send a description of the problem and your current address to: *RUN*, 80 Elm Street, Peterborough, NH 03458, ATTN.: Barbara Harris, Customer Service, or call 1-800-441-4403.

Microfilm: *RUN* is available in Microform from University Microfilms International, 300 N. Zeeb Road, Dept. P.R., Ann Arbor, MI 48106.

Back Issues: *RUN* back issues are available for $3.50, plus $1 postage and handling from: *RUN*, Back Issue Orders, 80 Elm St., Peterborough, NH 03458. On orders of 10 or more back issues, there is a flat $7.50 shipping and handling fee. Quantities are limited, and we cannot guarantee that all back issues are available.

Problems with ReRUN: Address correspondence to ReRUN, 80 Elm St., Peterborough, NH 03458.

***RUN*'s BBS:** The Running Board is *RUN*'s reader feedback bulletin board, which you can call anytime, day or night, seven days a week for up-to-date information about the magazine, the Commodore industry and news and information of interest to all Commodore users. Call: 603-924-9704. The Running Board uses a standard protocol, 300 baud, one stop bit, no parity, full duplex and a word length of eight bits.

"21 SECOND BACKUP"™
(VERSION 4-1)

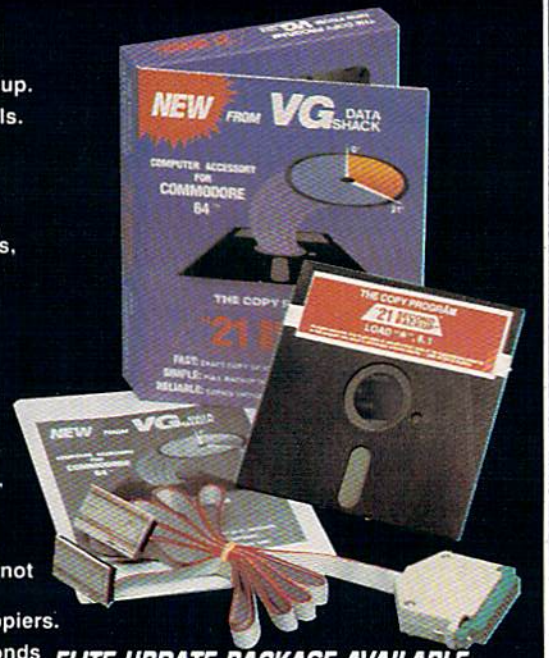
The SOLUTION
TO DISK DUPLICATION FOR COMMODORE-64

FAST — Duplicates diskettes in **21-seconds***.
SIMPLE — One keystroke provides complete backup.
RELIABLE — Error free reproduction from originals.

DUPLICATION PROCESS INCLUDES:
★ Automatic formatting and disk analysis.
★ Duplication of errors, track and sector ID's, gaps, checksums, sync bytes, address marks, clock bits, and densities.
★ Track to track synchronization.
★ Half track and abnormal track duplication.

ADDITIONAL FEATURES
- Easy to follow menu driven software.
- Snap on hardware installation.
- Program designed for use with 1 or 2 1541 drives.
- Hardware is transparent when "21 second backup" is not in use.
- "Verify option" to ensure transfer of proper data.
- User provided with exact duplicate of original (will not break protections).
- "21 seconds backup" will strengthen parameter copiers.

*Heavily protected disks will take maximum 45-seconds



ELITE UPDATE PACKAGE AVAILABLE

ANOTHER GREAT PRODUCT

SUPER FAST FILE BACKUP UTILITY

FEATURES INCLUDE:
★ Same hardware as "21 second backup"
★ Uses 1 or 2 1541 drives
★ Copy files; copies 36 blocks (9k) per-second
★ Modifies directories and adds seperators
★ Renames files, disk names, and ID's
★ Swaps, deletes, and transfers files
★ Disk analysis; verifies entire diskette
★ Validates files with accuracy
★ Formats entire diskette in 10-seconds
★ Split screen directory viewing

PLUS **15 SECOND BACKUP**
Duplicates entire non-protected diskettes in 15-seconds

21-second backup (with hardware)	$39.99
Super fast file backup utility (with hardware)	$39.99
21-second backup + super fast file backup utility	$55.99
21-second backup (disk only)	$19.99
Super fast file backup utility (disk only)	$19.99

ANOTHER TEST FOR THE 64?

Commodore continues its successful turnaround with two major announcements this past month.

First, Commodore officials are enthused about future prospects after the company posted its third consecutive profitable quarter. Commodore chairman Irving Gould predicts that the company's healthy financial outlook, combined with new products planned for this year, means that "Commodore is well-positioned for continued progress in 1987."

Commodore's president, Thomas Rattigan, notes that, with strong earnings for its third quarter ended December 31, Commodore is in a better financial position than it has been in a long time. Over $20 million in earnings represent the biggest profit for the beleaguered company in two years.

Riding this wave of financial success, Commodore also recently introduced two new computers for the Amiga line: the 2000 and the 500.

The 2000 is seen as a powerful business machine and a superior replacement for the current Amiga 1000, while the 500 is targeted toward the low-end home computer market. Many 64 and 128 owners may question Commodore's commitment to their computers and view the 500, which sports a price tag of $600, as a threat to their systems. (It wasn't that long ago that the 64 was also introduced as a $600 computer.)

Does this signal a swing in Commodore's commitment to the 64/128 line of computers?

The new ½ megabyte Amiga 500, with a built-in disk drive encased in a 128-like body, represents an excellent upgrade alternative, but it, nonetheless, remains untested. The current Amiga is just now catching up to the hoopla surrounding its introduction almost two years ago. The 64 remains the price/performance leader in the entry-level computer market, and all indications are that Commodore will not jeopardize its firm hold on that market.

Commodore's strong previous quarter performance is due, in part, to its broader product line, which includes increased Amiga sales, as well as the sale of PC clones in Europe. But the company's revenue-makers continue to be the 64 and 128. Sales of the 64 and 128 were primarily responsible for Commodore posting its third consecutive quarter in the black. And Commodore officials realize this.

In this month's lead article (p. 30), Nigel Shepherd, head of Commodore's North American operations, echoes Commodore's commitment to the 64/128 line and emphasizes that both of these computers figure strongly in Commodore's long-range plans. Shepherd predicts more visibility for the 64 and 128 this year, and notes that Commodore remains committed to serving all consumer needs, including first-time computer purchasers of the 64 and 128.

RUN, too, is committed to coverage of the 64/128 line. While other Commodore-specific publications are jumping on the Amiga bandwagon with more and more coverage of the Amiga computers, *RUN* remains faithful to its readers. *RUN* is the only major Commodore-specific publication that doesn't dilute its coverage of the C-64 and C-128.

Reader surveys reinforce this strategy, and, until our readers say otherwise, we will continue to give our readers the best in 64- and 128-specific coverage.

We look forward to exciting new applications products for the 64, as well as new developments in the GEOS arena.

This month, in addition to our candid interview with Commodore head Nigel Shepherd, we also feature a look at ordering computer products by mail. This can be a joy or a nightmare, depending on which company you're dealing with. In this article, we point out some of the precautions to follow and some of the pitfalls involved with mail order.

This issue also introduces several useful utility programs that greatly enhance and simplify the use of your 64 or 128. Handy Window (p. 78), written by Ian Adam, adds eight convenient accessory programs, including a memo pad and alarm clock. 128 Custom Windows (p. 46) lets you create some sensational-looking temporary windows in 80-column format—just like on the Amiga. And Sprite Print (p. 68) greatly eases the difficult task of printing sprites.

All of you Notepad 64 fans are, by now, familiar with the work of Bob Kodadek, who is back this month with another super program. PrintRite 64 (p. 52) performs some printing magic by making your printouts look more professional with true descenders.

Jim Grubbs, our expert in the area of "table-top" publishing, gives us the scoop on the most recent programs that combine text and graphics (p. 58).

THANK YOU, CONTESTANTS!

We extend our appreciation to the tens of thousands of *RUN* readers for making the 1986 RUNaway contest such a huge success. Just by entering the contest—even if you weren't chosen one of the 20 grand prize winners—you were entitled to a free bonus from QuantumLink. If you haven't received yours yet, please contact Jane Keely of QuantumLink at 703-448-8700.

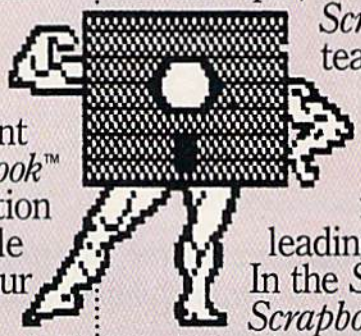
There are two things almost everyone has in common. An active imagination. And a tough time putting it on paper.

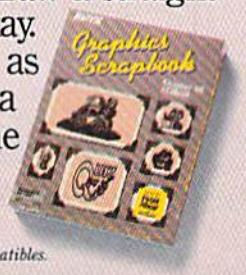
But now we present our *Graphics Scrapbook*™ series. A huge collection of pictures that enable you to easily bring your creative inspirations to The Print Shop,™ PrintMaster™ or Create a Calendar.



Over a hundred eye-catching pictures on every disk.

On each disk there are over 100 unique pictures. For example, in our *School Scrapbook,* teachers and students will find everything from cheerleading to finals. In the *Sports Scrapbook,* dozens of sports, mascots and trophies. In the *Off the Wall Scrapbook,* well, just expect the unexpected. And plenty more Scrapbooks are coming. So even if you can't draw a straight line, it's okay.

As long as you make a straight one to the offer below.



Apple & Compatibles, C64/128, IBM & compatibles.

ALLOW US TO DRAW YOUR ATTENTION.

Time flies. It might as well look snazzy as it goes by.

Introducing *Create A Calendar.* Our simple, powerful tool that lets you design daily, weekly, monthly or yearly calendars. In moments.

Among numerous features, it includes graphics, borders and fonts for just about every occasion. Or use your own pictures from the Graphics Scrapbooks or Print Shop compatible graphics disks.

What's more, it lets you write multiple lines of text on every date. To make it easy to keep track of everything you're supposed to do. And everything you've done. So this year, go ahead and make your own calendars.

There couldn't be a nicer way to pass the time.

EPYX®

USE OUR PREVIEW DISK TO DRAW YOUR OWN CONCLUSION. *Send your name, address, phone number, computer type, and a check or money order for $1.50 to Calendar/Scrapbook Preview, P.O. Box 8020, Redwood City, CA 94063. Canadian orders add 50¢ postage. 6-8 weeks delivery. Expires 8/30/87. Valid only in cont. U.S. and Canada.* 29

Load and run any C-128 program with the run-stop key; use fancy screen clears in your C-128 programs; make mailers for your Print Shop creations; and more.

By JIM BORDEN

Magic is the original *column of reader-submitted hints and tips. Each month we present brief, useful computer "tricks" to help you get the most out of your Commodore computing system—whether you're a beginning or advanced computerist, a C-64 or C-128 owner. Magic is a forum for* RUN*'s imaginative and inventive readers to share their programming tips, brief software or hardware modifications, shortcuts or items of general interest. If your idea makes computing easier, faster, more exciting and enjoyable, send it to:*

Magic
RUN *Magazine*
80 Elm St.
Peterborough, NH 03458

RUN *pays $10 to $40 for each trick published in the column. A payment of $50 and a Magic Contributor T-shirt is awarded for the Trick of the Month. To be eligible, the Trick of the Month must be for the C-64 or for the C-64* and *C-128. Tricks for the C-128 only are not eligible for Trick of the Month.*

If you'd like a copy of the latest edition of RUN*'s Magic Trick Writer's Guide, send your request with a self-addressed, stamped envelope; you'll receive a copy in two to three weeks.*

Trick of the Month

$3D7 Starting at the bottom—The next time you use *RUN*'s Perfect Typist program to check old listings, start at the end of the listing and work back to the beginning. Checking programs this way prevents the checksum from overwriting the line you check next. After checking the lines on the screen for accuracy, bring down the next group of lines by listing to the line at the top of the screen minus one. For example, if the top line is 5200, type LIST – 5199.

Ching Ko
McPherson, KS

$3D8 Print Shop mailers—My program prints mailers for the quarter-fold cards created by The Print Shop. It prints a mailer on a sheet of standard paper, then moves to the next sheet so you can print another one. If you own a word processor with a mail-merge option, you can print the mailer outline, then run the paper through a second time and use mail-merge to address it.

$3D9 Checking the checksum—If you're typing in a program that contains Data statements and a built-in checksum, there's an easy way to check for errors without executing the program. Find the line that contains the Poke and delete it. Also, put a Stop command just after the line that checks the value of the checksum. Then run the program.

If the checksum generates an Error message, find the mistake in the Data statements and make the needed changes, and then run the program again. If you get another error message, look for another mistake. When you run the program and get a Break message in the line that holds the checksum, you know your data is correct. Then type the Poke command (with variables) back

The Newsroom.™

Design, Create and Print Out Your Very Own Newspaper.

Look who's making news.

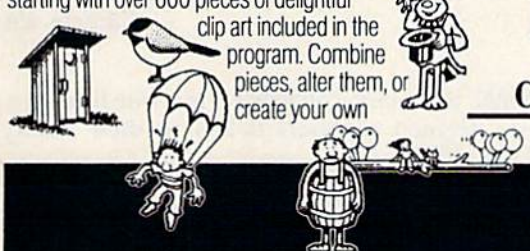
The Newsroom™ is an exciting program complete with everything you need to create fun and sophisticated newspapers that are uniquely yours.

Families, schools and businesses everywhere are using The Newsroom to tell their story.

Here's what you can do.

The Newsroom is surprisingly easy to use. You're in control of all design elements, starting with over 600 pieces of delightful clip art included in the program. Combine pieces, alter them, or create your own images with The Newsroom's dynamic drawing and editing tools. Whatever the nature of your news, you'll find art that fits the situation.

You can enter text with The Newsroom's word processor in any of five different fonts that automatically wrap around pictures. You can print out on legal or letter size paper using any popular computer printer. And, if you have a modem, you can send and receive newspapers between other owners of The Newsroom, no matter what computer they're using.



Now Available for
Apple II+, IIe, IIc
IBM PC
Commodore 64/128

More clip art to add to your collection.

Clip Art Collection Volume 1™ offers an additional 600 pieces of art in a variety of categories. You'll find the perfect piece to illustrate even the rarest of topics.

Clip Art Collection Volume 2™ offers over 800 pieces of art for businesses large and small.

The Newsroom is for everyone. Look for it at your favorite software store.

SPRINGBOARD

The Newsroom: Commodore 64/128—$49.95. Apple II+, IIe, IIc & IBM PC—$59.95. Clip Art Collection Volume 1—$29.95 All formats. Clip Art Collection Volume 2—$39.95 All formats.

in, remove the Stop command you added and save the program.

Stan Jones
Fairbanks, AK

$3DA Basic REF statement—I've found that including the source of a program I've gotten from a magazine in a REM statement at the beginning of the listing saves me time when I need to reference the source. I include the name of the magazine, the issue and the page on which the program begins.

Rodney L. Praegitzer
APO, NY

$3DB C-128 Automatic Load/Run menu—Imagine loading and running any disk-based program without typing in the Load and Run commands and the filename. This three-liner uses only the shifted run-stop and return keys to load and run programs.

Save my program as the first program on your disk. Then, each time you use the disk, press shifted run-stop to display the directory on the screen, move the cursor to the line with the program you want to run and press return. *Presto!* Your program loads and runs like magic! If your menu fills more than one screen, press the stop key, type CONT, press return and repeat the procedure above.

I added screen colors to the automenu program; you may change the color values to suit your tastes.

```
1Ø PRINT"{SHFT CLR}"CHR$(27)"M":REM 128 MEN
   U LOAD-LON D. OLSON

$3DC C-128 custom characters—Here's help for those of you who use custom characters on the C-64 but are having trouble with them on the C-128. To use them on the 128, you must first copy the ROM character set at locations 53248–55295 into RAM at 14336–16383 and then set bits 1, 2 and 3 of location 2604 to 1. This tells the 128 to look for characters beginning at 14336 in RAM.

Since Basic normally uses the area where the RAM characters will be, you need a GRAPHIC1:GRAPHIC0 command to move the start-of-Basic safely above this area and switch back to 40-Column mode. Don't use a hi-res screen, or the character set will be ruined.

The following program redefines the @ character to an up arrow.

```
1Ø REM 128 CUSTOM CHARS-NELSON SEARCY
2Ø GRAPHIC1:GRAPHICØ:REM FOR 4Ø COL ONLY
3Ø POKE 26Ø4,3Ø:POKE217,4:FAST
4Ø BANK14:FOR A=53248 TO 55295:B=PEEK(A):PO
   KEA-38912,B:NEXT:BANKØ:SLOW
5Ø FORA=14336 TO 14343:READ B:POKEA,B:NEXT:
   REM "@ TO {UP ARROW}"
6Ø DATA Ø,24,6Ø,126,24,24,24,24
```

Nelson Searcy
Forest City, NC

$3DD Better than a Basic loader—If you have some utilities in the form of Basic loaders (with Read and Poke statements and many Data lines), you can load, run and save them directly to memory with an ML monitor. Then you can load the programs directly with LOAD "program",8,1. Look at the C-64 Wedge program on your copy of the 1541 demo disk for an example. It loads your utilities much faster, since they don't have to be read and poked by Basic.

Rolf Stein
Naucalpan, Edo. Mexico, Mexico

$3DE Flipping faster through GEOS disk directories—One undocumented feature of GEOS lets you view the pages of a disk directory in Icon mode without the joystick. Just press the control key and the number key corresponding to the page number you wish to see.

Henry H. Tolbert
Marietta, GA

$3DF GEOS and the restore key—When you exit from GEOS to Basic, the restore key is redefined to reboot GEOS. You can eliminate this function either by typing POKE 792,71 and pressing return or by turning the computer off and on again.

R. V. Taylor
Little Rock, AR

$3E0 A Star with GEOS—Use your Star SG-10 printer with GEOS by setting the dip switches to the On position.

Mark L. Ellis
Germantown, TN

$3E1 RUN Script default file—Forgetting to give your document a filename when saving it in RUN Script 2.40 makes the program save the file with the default load name, " ", as the filename. Take advantage of this "error" by giving the default load name to a file you use often. Then, to load it, you just have to press F1 and L. When you want to scratch the file from RUN Script, use a question mark as the filename. Just be sure no other single-character filenames are on the disk, or they'll be erased, too.

Jim Borden
Carlisle, PA

$3E2 Decimal to binary converter—My one-line program converts decimal numbers 0–255 to their binary equivalents.

THE LEADING C64 WORD PROCESSOR JUST GOT BETTER!

No Brag. Just Fact. WORD WRITER 3 has more features, more power, and is easier-to-use than any other C64 word processor.

***And now the facts!* We've added:**

- **An 85,000-Word Spell Checker** – plus, unlimited sub-dictionaries.
- **An Integrated Thesaurus** with over 60,000 synonyms and alternatives.
- **An Integrated Outline Processor** that quickly organizes notes, facts, and ideas into a convenient outline format.
- **An 80-Column Print Preview Mode**
- **Highlighting:** Prints out your text incorporating underlining, **boldface**, *italics*, superscript, subscript, and more.
- **Headers and Footers**
- **Automatic Program Set-Up:** Configures WORD WRITER 3 to your choice of printer codes, screen colors, and more.
- **SwiftKeys**: access commands quickly, using a minimum of keystrokes.
- *. . . and much, much more!*

You Get Free, Ongoing Technical Support

Rest assured. When you show your support by buying Timeworks software, we never stop showing ours. That's why our twelve Customer Support Technicians have been giving our T.L.C. (Technical Loving Care) *for over four years.* And, all our programs have a Money Back Guarantee**

TIMEWORKS®

More power for your dollar

Timeworks, Inc. 444 Lake Cook Road
Deerfield, Illinois 60015 312-948-9200

Word Writer 3 interfaces with Timeworks' other C64 programs for a complete Productivity System:

- **DATA MANAGER 2** with **Report Writer**
  A highly flexible filing and recordkeeping system that stores, retrieves, sorts, evaluates, and updates large amounts of information. Includes: Report Writing, Graphics, Statistics, and Label Making capabilities.
- **SWIFTCALC** with **Sideways**
  A powerful, surprisingly easy-to-use electronic spreadsheet for home and business use. Plus, with Sideways, prints all your columns on one, continuous sheet – sideways!
- **PARTNER 64**
  A cartridge-based product with eight instantly accessible desktop accessories. PARTNER operates *"concurrently"* with your other C64 software programs.

Available for Commodore 64/128* Computers (64K, 40 Column)

Suggested Retail List Prices:

WORD WRITER 3	**$49.95**
DATA MANAGER 2	**$39.95**
SWIFTCALC	**$39.95**
PARTNER 64	**$59.95**

EASY-TO-USE SUBROUTINES AND UTILITIES

Activating C-128 keys in C-64 mode—This program will let you use your C-128's keypad, no-scroll key and cursor keys while running programs in C-64 mode. It works by rewriting the IRQ routine so new keyboard-scan code can be added.

The program activates the no-scroll key by changing the Kernal CHROUT vector to freeze the computer in the IRQ routine when the key is pressed. When you've paused printing, you can press any key to start it again, but I'd suggest using the no-scroll key.

The 128 Keys in 64 Mode program may not work with some commercial software, depending on how much the latter changes the Basic pointers. However, it should work with any Basic program that doesn't use the same memory addresses. R

Jim Borden
Carlisle, PA

The Accountant, Version 1.3

B

Small Businesses Can Now Be Spared Piles of Paperwork

The Accountant, designed for small business, is a simplified accounting system for the C-128 that handles the four common basic accounting tasks: maintaining the general ledger, running payroll and keeping track of accounts receivable and payable. Each task is covered in a separate section in the user's manual. To let you get a feel for program operation, The Accountant comes with a data disk that contains files for a fictitious company.

Before running the main program, you must run the Program Setup, which will prompt you for information about your company, your employee classifications, payroll deduction account numbers, and details about your printer. Once you've entered this and created a data disk, you can automatically load the main program from disk.

The Accountant is set up for a monthly accounting cycle. The program provides for 199 accounts distributed in 13 groupings, including three types of assets—current, fixed and other—as well as both current and long-term liabilities.

Updating the general ledger is done from the menu, as is verification of ledger balances. The program uses a set of self-balancing accounts. If, for some reason, the ledger becomes unbalanced, instructions are included in the manual for handling this situation.

Available general ledger reports include a detail report, which displays all the current month's postings and the ending balance, a listing of the chart of accounts, a balance report and a financial statement.

The check register lets you post checks, clear the register, display or edit posted checks, and print the register. Checks may be classified to as many as six general ledger accounts, in up to 400 classifications per month, and up to 200 checks can be posted per month. However, the program will not actually print the checks.

Report Card

A ***Superb!*** An exceptional program that outshines all others.

B ***Good.*** One of the better programs available in its category. A worthy addition to your software library.

C ***Average.*** Lives up to its billing. No major hassles, headaches or disappointments here.

D ***Poor.*** This program has some problems. There are better on the market.

E ***Failure.*** Many problems; should be deep-sixed!

The general journal is accessed from the general ledger menu and lets you post up to 15 accounts in one journal entry, with a maximum of 30 such entries.

The payroll section, which can handle up to 60 employees, is divided into three sections: employee data, weekly payroll writeup and reports. The weekly payroll writeup lets you post regular, overtime and vacation hours, and will print payroll reports and payroll checks.

Although the accounts receivable and payable sections are accessible from the program's main menu, they are independent of the general ledger. Accounts receivable is a way of keeping track of up to 300 outstanding invoices among 100 customers; accounts payable keeps track of up to 300 invoices received from up to 99 vendors.

There are options to enter and edit customer, vendor and invoice information, to eliminate paid or credited invoices, and to generate a number of reports.

One advantage of this program is that you do not constantly have to swap disks. I also like the menu-driven approach to the software and the judicious use of letters, not numbers, as menu choices. I applaud KFS's decision to refrain from offering a confusing jumble of options to its users.

The manual is complete and easy to follow, and includes check lists for doing various monthly tasks. Unfortunately, its quality is marred by minor typographical errors and lack of an index.

I didn't like the fact that zip codes

IS GETTING THE ANSWER TO SOFTWARE PROBLEMS A BIGGER PROBLEM THAN THE PROBLEM?

Don't stay on hold when there's help online from CompuServe® Software Forums.

The new upgraded version of your software locks up. And every time you reboot, you get stuck in the same place in the program.

You've chucked the manual, because you've done exactly what it tells you to do six times already. So you call the software company.

Now you spend half a day beating your head against a brick wall of busy signals, ranting at recorded messages, hanging around on hold. And you still don't get the solution to your problem.

Meanwhile, progress is stopped and your profits are dribbling away. But wait. There's help...

Several prominent, progressive software publishers recognize this problem, and working with CompuServe, have developed a solution—CompuServe Software Forums.

Now you can go online with experts from the companies that produced your software and get prompt, written answers to your specific problems. You can even talk with the actual software developers.

Aldus,® Ashton-Tate,® Autodesk,® Borland International,® Creative Solutions,® Digital Research,® Living Videotext,® Lotus® Inc., Microsoft,® MicroPro,® Misosys Inc.® and Software Publishing® all have CompuServe Software Forums. And we keep adding more.

CompuServe's large subscriber base also puts you in touch with thousands of other, often more experienced, users of the same software. You'll find they can give you lots of creative ways to get the most out of your software.

And software forums are the best way to learn about product updates, new product announcements, new ways to expand the uses of your software, and offer free uploads of your own programs.

Our online electronic magazines frequently publish software reviews. And you can find help for many other software products in our other computer-related forums for IBM,® Tandy,® Atari,® Apple,® Commodore,® TI® and others.

The last thing you need when you've got a software problem is a bigger problem getting answers. So, from now on, get prompt, informed answers on CompuServe Software Forums.

To buy your CompuServe Subscription Kit, see your nearest computer dealer. Suggested retail price is $39.95.

To order direct or for more information, call 800-848-8199 (in Ohio, 614-457-0802).

If you're already a CompuServe subscriber, just type GO SOFTWARE at any ! prompt.

are limited to five characters and that phone numbers have no provision for area codes. Also, making corrections with this program is a hassle because different things get corrected in different ways. Even getting rid of simple typos requires the use of the left-arrow key above the control key instead of the inst/del key most people are accustomed to using.

The program's user-friendliness suffers in places where you find yourself doing what ought to be the computer's work. For instance, rather than just entering the various necessary facts about an employee for the payroll, you must supply rather complicated codes to record his or her exemptions, withholding classification, pay period, exemption from FICA, and so on.

Finally, there are references in the manual to the disk drive locking up during a file update. Although this didn't happen to me, I couldn't help but wonder about it. [Editor's note: According to KFS, this problem has been corrected in Version 1.3A.]

KFS maintains a help line and updated programs are made available for a handling charge of $2.95.

There are some rough spots with The Accountant, but it does seem adequate to keep the books of a small business. According to KFS, if you're unsure as to whether or not the product is right for you, you should first buy their $9.95 sample disk. And it also might be wise to check with your accountant before buying any accounting software. *(KFS Software, Inc., 1301 Seminole Blvd., Largo, FL 33540. C-128/$149.95 disk.)*

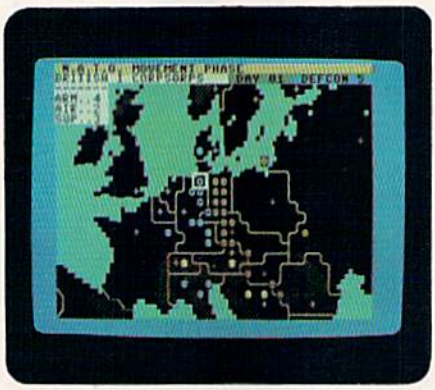
Theatre Europe B+

Will You Select Peace or Nuclear War?

The overwhelming majority of war simulations let you recreate famous battles from the past. The scenario for Theatre Europe, however, is one that has never, and hopefully will never, take place. It is the invasion of West Germany by Warsaw Pact forces, and the attempt by NATO forces to prevent a communist takeover while avoiding a nuclear showdown.

Theatre Europe simulates the first 30 days of such a conflict. It is played on an on-screen map of Europe where NATO forces are represented by blue dots and Warsaw Pact forces by red dots. You can command either side, with the computer controlling the opposing armies, but, unfortunately, there is no option for a two-player game.



It's your move with Theatre Europe's on-screen map.

The game begins with most of both sides' units concentrated around the West German border. Each day consists of several phases in which you can move tactical units, attack enemy units, rebuild battle-worn units with reinforcements, assign air units to specific missions, and launch special missions using chemical or nuclear weapons.

To help you make strategic decisions, point values for overall combat strength, air support and state of supply are displayed when you move the cursor over a circle representing one of your units. If you've assigned sufficient air units to reconnaissance, then the point values for computer-controlled forces are available as well. A complete reinforcement schedule for both NATO and Warsaw Pact forces is included in the package along with a copy of the game map.

One of the ways in which Theatre Europe differs from most strategic war games, aside from the fact that it's less complicated than most, is that it lets you take part in the battles through action screens. After deciding which enemy units to attack in the Battle phase, you select a specific battle to participate in. You can then fire missiles at enemy infantry soldiers, tanks and jets.

Although the graphics and animation featured on the action screens would never win any awards, this option might be useful for wargamers who aren't quite ready to give up their arcade-style shoot-'em-ups, or anyone who doesn't want to spend the entire game staring at a map of Europe. Be warned, however, that your performance on these screens will directly affect the outcome of battles back on the main screen.

Theatre Europe can be frustrating at first, especially if you command the NATO forces and don't understand that you're in a no-win situation. Since the game only simulates the first month of what would probably be a long struggle, the NATO objective is really only to thwart the Warsaw Pact invasion, not to march in and wipe out the communists completely. If you command the Warsaw Pact armies, you have to use your military might to break through the NATO defenses and gain a foothold in Western Europe.

Theatre Europe can easily be completed in a single sitting, and games in progress can be saved to disk. The game includes three difficulty levels, of which levels two and three let you launch special missions with names like Assault-Breaker, Deep-Strike and Iron-Snake.

No matter which level you select, Theatre Europe is a good introduction to strategic military simulations and one that might even give you something to think about when the battle is over. *(Datasoft, 19808 Nordhoff Place, Chatsworth, CA 91311. C-64/$34.95 disk.)*

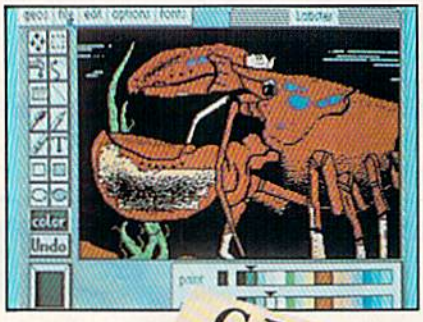
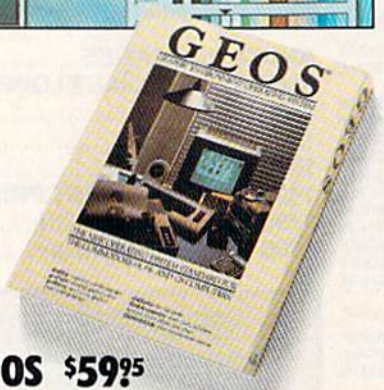
IF YOU STILL THINK CO
PLAY AROUND



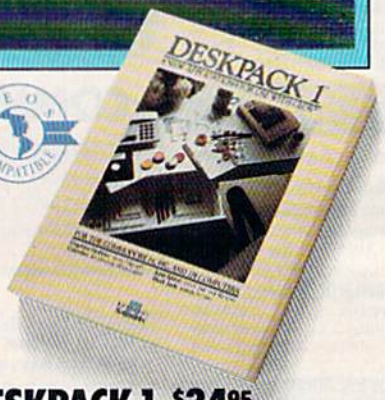


GEOS $59.95

The Graphic Environment Operating System that opens up a whole universe of new possibilities for Commodores. With geoWrite, geoPaint, fast-loading diskTurbo and support for all GEOS-compatible applications.

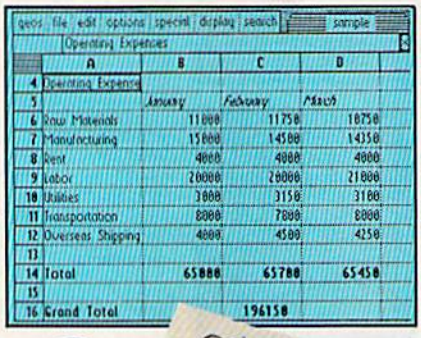
FONTPACK 1 $29.99

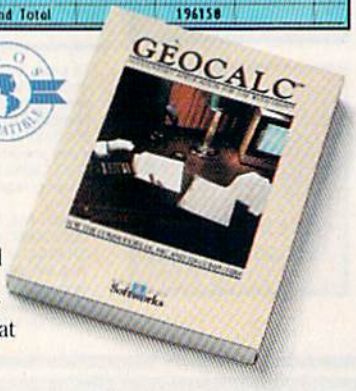
A collection of 20 more fonts for use with GEOS applications, in various shapes and sizes for more expressive and creative documents.



DESKPACK 1 $34.95

Four GEOS-compatible applications: Graphics Grabber for importing art from Print Shop,™ Newsroom™ and Print Master™ graphics; Calendar; Icon Editor and Black Jack Dealer.





GEOCALC $49.95

The GEOS-compatible, number-crunching spreadsheet for tracking and analyzing numerical data. Create your own formulas, perform calculations for anything from simple geometry to "what if" cost projections.

GEOFILE $49.95

The GEOS-compatible database manager that sorts, edits and prioritizes whatever data you feed it. You fill out the "input form," specify your command, and geoFile takes it from there.

Commodore and Commodore C64 are trademarks of Commodore Electronics, Ltd. GEOS, geoWrite, geoPaint, geoCalc, geoDex, geoMerge, geoFile, Deskpack 1, Fontpack 1, Writer's Workshop and Berkeley Softworks are tradenames of Berkeley Softworks. Print Shop, Newsroom, Print Master, and Paper Clip are tradenames of companies other than Berkeley Softworks.

Sooner or later, you're going to discover that there's more to Commodores than fun and games.

You're going to discover power.

Not the kind of power that blasts aliens out of the galaxy. But the kind that whips through boatloads of data in seconds. The kind that crunches numbers and drafts documents like child's play.

The kind you find in GEOS.

Every GEOS application can take your Commodore from "mastering the universe" to a university master's degree, with all kinds of advanced capabilities that function at hyper-speeds you never imagined possible.

So if you're tired of toying with technology, try playing around with GEOS. Once you feel its power, you'll know that for anyone who still thinks Commodores are toys, the game's over.

Software Gallery

From p. 18.

Alien invaders have established a base in the northern polar regions and are busily converting the earth's atmosphere into a deadly mixture of ammonia, methane and chlorine gas. Protected by their own tanks, recon sleds, flyers and a force field, it is thought that only you and the Arctic Fox will be able to get through and destroy their headquarters—but time is fast running out.

You are in the driver's seat, with total control of both movement and weapons. The Fox is a 37-ton tank, specially suited to ice and snow, and fitted with a cannon, seeing-eye missiles and the ability to lay mines. It can also travel at 144 miles per hour, turn on a dime and climb steep grades.

There are four sections to this game: The first is an enemy preview. The alien war machines are paraded for inspection, and their specifications and armaments are listed on the screen.

It is in the Training mode that you can actually begin to fight the enemy. Be aware, however, that your armor is invincible while theirs is weakened. This level is little more than a duck shoot, but it gives you a safe opportunity to master the Fox's controls.

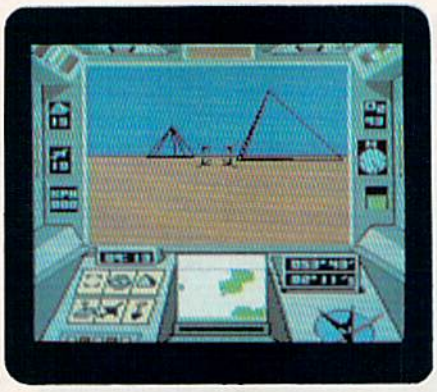
In the Beginner mode, the enemy is more difficult to destroy, and they can destroy you. This is a get-tough-or-die session: If you can't survive here, you're not going to be worth much at the Tournament level.

All the chips are on the table in the Tournament level. Enemy strength and firepower are equal to yours, and they'll be fighting hard to keep you away from headquarters until the completion of the atmospheric conversion that would kill everyone on Earth, including the commander of the Arctic Fox.

Due to the partial conversion of the atmosphere, the polar weather has now become unstable. At any moment you may find yourself in the middle of a blinding blizzard or in the darkness of a thunderstorm, lit only by the sporadic flash of lightning.

Your view of the terrain is provided by a color video display that shows you what is ahead or behind you. A smaller screen provides an overhead view through a satellite radar; however, this is easily scrambled during storms.

At the left of the control panel is a weapons console, and, above it, icons inform you of the amount of firepower left. At the right of the screen are a compass and an oxygen gauge. Because the atmosphere here is already hostile, if you run out of oxygen, you're dead.



You're surrounded by 37 tons of steel in Arctic Fox, but are you really safe?

Graphics, documentation and sound are all very good in Arctic Fox. The sound includes things like your treads swishing on snow, the rumble of thunder, your weapons firing and the Klaxon alarm. The documentation includes a quick-reference card with several keyboard command reminders. I give this simulation high marks on all counts. *(Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404. Round Out Your Graphics Library

With curiosity in GEOS at fever pitch, you'll be interested in hearing about other developments in the world of Commodore graphics. Three packages from Solutions Unlimited have, at least to a small extent, broadened the field of C-64 graphics programs. They are Photo Finish, Billboard Maker and Icon Factory.

Although considered graphics programs, they differ markedly from GEOS in that they're controlled exclusively from the keyboard, they cannot be used to create a graphics screen from scratch, and they do not contain word processors. Instead, they are variations of one theme—namely, the modifying and printing of graphics screens.

The objective of Photo Finish is to add color to hi-res and multicolor screen dumps that are performed with a dot matrix printer. The colors are actually various patterns substituted for what should be colored areas of the image as it appears on the screen. Since this process is commonly called scaling, Solutions Unlimited decided to name these color patterns "grey scales." Grey scales can be saved to and loaded from disk as small files.

Photo Finish's Color Editor

The first step in using Photo Finish is to get a graphics screen on disk and load it into the Color Editor. The Editor works by first splitting the border color in half, and then by giving you the option of interchanging the top border color with the bottom border color. You can enter another editor at any time to modify the patterns that correspond to each of the C-64's 16 colors.

Two other options are a color stripper that removes the color from the screen, and a flip option that flips the screen to create a mirror image.

No words of caution appear in the documentation concerning the use of the Color Editor, but it can be a source of trouble to the unsuspecting. One example is a problem that can occur when you're performing fine detailing of solid colors.

Let's suppose you wanted to change the trunk of a tree from brown to green, and there's a man wearing a green shirt standing in front of the tree. If your coloring grid adjoins both the man and the tree, you'll have to change the color of his shirt or it will blend into the tree trunk.

Photo Finish also lacks refinement in the grey scale area. The program can temporarily ruin the printout of an otherwise good screen when the patterns within the grey scale don't complement the image. Think of the consequences if brown is represented by a checkerboard pattern: A screen image of the Mona Lisa would appear

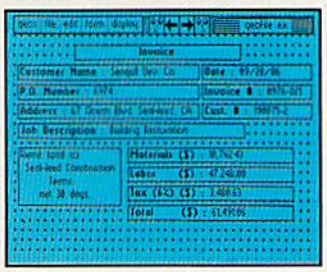
BY THE TIME SHE GETS TO "PHOENIX," HE'LL BE SLEEPING.

Having thousands of facts is one thing. Finding the ones you need is another. Which is why you should consider buying geoFile. The easy-to-use database manager for GEOS-equipped Commodores.

Whether they're receivables or recipes, once you have geoFile, you can fly through facts in seconds, clicking and picking the ones you want, just the way you want them.



It's as simple as filling out a form.

The geoFile "form" organizes all kinds of information. Like names, numbers, rates of objects' acceleration when dropped from two-story buildings—you name it. As much as you can fit on a printed page.

Once your data is in, the real fun begins.

You want names of bus drivers? From Arizona? Under five foot six? Between the ages of 33 and 35? With incomes of $22,396 or more? Who sneezed in June?

Just click your mouse and watch geoFile go to work. Searching. Sorting. Comparing and listing the data alphabetically. Or numerically. Or in whatever priority your form specifies.

You can put the data into form letters and lists with geoMerge. Or into math functions, with geoCalc. Or if you really want to get fancy, you can display your information graphically with geoChart.

And geoFile does it all in seconds.

Now, with all that in mind, what are you going to do—spend a few bucks on geoFile?

Or spend all night wishing that you had?

To order call 1-800-443-0100 ext. 234

Circle 111 on Reader Service card.

to have a tablecloth draped over her shoulders!

However, the most disturbing aspect is that the checkerboard pattern would consist of perfectly straight horizontal and vertical lines—fine for technical illustrations, but not for following the contours of clothing.

Print Options

All three packages include an Optimizer routine that can be activated before a printout, provided that you generate a quadruple-sized—as opposed to single-sized—screen dump. The Optimizer utilizes a process that links individual pixels together by adding more pixels, which in turn smooths out ragged edges that may exist on a screen display.

I found the print options to work flawlessly on Star Micronics, Commodore and Panasonic printers. A separate printer-customizing program is included on the disk in case you can't get your printer to work properly with Photo Finish.

The short, 19-page manual that accompanies the program is adequate for providing all the pertinent information needed.

After using Photo Finish extensively, I'm still undecided as to whether or not it's a substantial and useful program. I was impressed with the package's ability to create distinctive and accurate hardcopies of both multicolor and hi-res screens, but you can already do that with most of the software packages that create the screens used by Photo Finish.

The title of the second program, the Billboard Maker, made me apprehensive, my reservations stemming from a bad experience with another poster-maker program, which made my Gemini 10-X's printhead begin to smoke after only 15 minutes of continuous printing.

As the name implies, Billboard Maker lets you print large, multipiece posters and normal-sized hard copies from screen images. In an effort to minimize damage to the printhead, I limited my enlarged printing to screens that contained few lines. I don't recommend using the enlarged screen printing unless you have a spare printhead or two and extra printer ribbons.

Billboard Maker can be likened to a computerized Ginsu knife, which lets you dice, slice and splice the screen image in a variety of ways. After that, you can save the modified screen to disk and print it.

After activating Billboard Maker and loading the hi-res or multicolor screen of your choice, you can move to menus, which are referred to as rooms in the documentation.

In one room, entitled the Ironing Board, you can flip the screen upside-down, strip the color from it, convert it to a negative image and flip it to a mirror image. A room named the Cutting Board gives you the option of framing the screen with a variety of attractive borders. When the screen is saved to disk and printed, the frame you selected is saved and printed right along with the image.

Another room lets you put text in a variety of fonts. With the Olympic font, you can place small, predefined drawings on your screen.

Billboard Maker's 54-page user's manual is not well written, nor is it a good tutorial guide. I found using each menu option an easier way to learn how to use the package.

Billboard Maker, though not a breakthrough in C-64 graphics, is fun and simple to use. No previous graphics knowledge is needed, but previously created graphics screens are essential. There is practically no way you can accidentally cause permanent alteration to an original screen with this program.

I found the third program, Icon Factory, to be a toss-up with Billboard Maker as the most interesting package of the trio. A clever menu screen depicting the exterior of a factory building appears on the start-up screen. You use the function keys to move from one strategically placed screen-manipulation option to another on the exterior of the building.

Software Compatibility

Icon Factory accepts screens created by nearly all the popular graphics programs, as well as images created by The Print Shop and Newsroom. Like the other two packages, it lets you read in a hi-res or multicolor screen from disk, then modify it until it no longer resembles the original. It also gives you the option of saving your modified screen to disk.

Icon Factory contains provisions for stretching a section of the screen image. Stretching is accomplished by adding solid lines of pixels on either the X or Y axis. An Overlay option is also included.

The same flipping, cropping and image-switching routines found in Billboard Maker make their home in Icon Factory. You can use it to convert a hi-res to a multicolor screen, and vice versa, via a process called Minimum Resolution Loss (MRL).

I was doubtful of the effectiveness of the MRL feature, because I've never seen any program that could successfully convert a finely detailed hi-res screen to a multicolor screen and back again without changing it at least slightly.

I was disappointed with the results I obtained with this feature. The MRL won't properly convert if there is more than one visible dot per 8-pixel × 8-pixel area.

Icon Factory possesses the Optimizer routine for smoothing the screen image by enlarging or linking together perpendicular lines. It does not, however, possess a print routine, which may be an incentive to purchase Photo Finish or Billboard Maker for customized printing.

Icon Factory's 24-page user's manual is clearly written, but not logically presented. Having to reference paragraphs on different pages wastes a lot of time.

As a C-64 graphics package, Icon Factory is an interesting development in the same context as Billboard Maker. I successfully created a good number of customized screens with the program and was favorably impressed with its overall performance and features.

Overall Summary

I'm convinced that the world can never have too many good C-64 graphics programs. The wide choice of commercial graphics and CAD packages, coupled with the enormous popularity of GEOS and print utilities like The Print Shop, indicate that there are plenty of C-64 users who share my view. While there's been a great deal of development and progress in this area, there's still plenty of room for growth.

Photo Finish, Billboard Maker and Icon Factory match or exceed the quality of workmanship I've seen in a variety of commercial graphics products. The weaknesses shared by the three programs lie in the documentation. The products themselves are

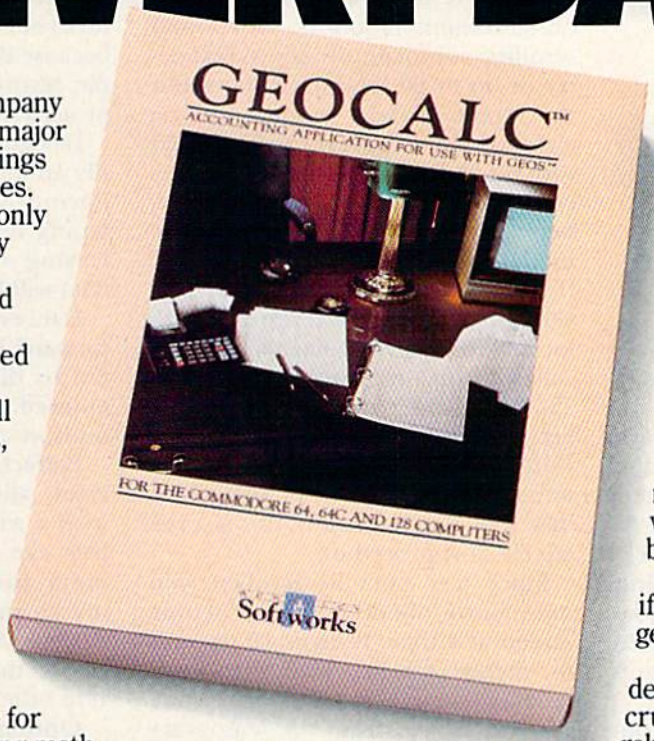
WE'RE SELLING THE ONE THING WE COUNT ON EVERY DAY.



Running a software company is no picnic. We have to do major calculations every day. Things like payables and receivables. Taxes. Budgets. And lord only knows how many quarterly cost projections.

That's why we developed geoCalc. The spreadsheet program for GEOS-equipped Commodores.

You see, we not only sell software for Commodores, we actually use them in our own offices. So when Lee needs to project inventory costs, or Brian wants to figure employee bonuses, the first thing they do is load up geoCalc.

The very same spreadsheet you can use at home for figuring finances, mastering math mysteries or personal production predictions.

With geoCalc, you get 112 columns and 256 rows to fill with all kinds of text and numbers. And formulas that range from simple addition to arctangents and cosines that could knock any physicist cold.

There are investment functions. Averages. Even a random number generator. And writing your own formulas is as easy as, umm... one, two, three.

With mouse in hand, you can zip all over the huge spreadsheet, solving "what if" questions with a few quick clicks. Questions like, "If Sheila takes the waitress job, how much can we expect our taxes to increase?" Or "How much faster will the Chevy go if we rip out the muffler and the back seat?"

No matter what the problem, if it has to do with numbers, geoCalc can solve it. Fast.

So if you notice a need to decimate digits, consider crunching them with geoCalc. We rely on it for our business. In fact, we couldn't manage without it.

free of programming defects and perform admirably in each area.

Whether or not these are worthwhile software investments is up to you. Beginners in this field are better off investing in a true graphics-generating package, such as Doodle! or KoalaPad, before considering purchasing any of these packages. However, if you're a C-64 computer artist, or already possess a sizeable collection of graphics screens, these programs can round out your personal inventory of C-64 software. *(Manufacturer: Solutions Unlimited, PO Box 177, Dobbs Ferry, NY 10522; Distributor: Relevant Software, 283 Mamaroneck Ave., White Plains, NY 10605. C-64/Icon Factory and Billboard Maker, $39.95 disks; Photo Finish, $29.95 disk.)*

Perfect Writer; Perfect Filer

B+

Two Compatible Programs Designed for Home Or Office Use

Perfect Writer and Perfect Filer are two separate programs that share the same basic command structure and can read each others files. Writer is a complete word processing package that includes both a spelling checker and a thesaurus. Filer is a database program that can generate form letters and maintain lists or office records.

The fact that these programs operate under the C-128's Z-80 processor is a mixed blessing. Without CP/M, these well-established programs wouldn't even be available to Commodore users. With it, we get a chance to experience the strengths, as well as the limitations, of an operating system that was designed for computers with rapid disk access and small memories.

Perfect Writer is a full-featured, well-documented, easy-to-use and powerful word processor that can be unreservedly recommended for anyone who works in the CP/M environment. The program's biggest asset turns out to be its instant compatibility. Despite the fact that it is capable of spell checking, searches, variable headings, multiple formats, footnotes and proportional printing, this CP/M software does not distinguish itself when compared to many other word processing packages that run under the C-128's Native mode, simply because it's too slow.

While newer operating systems such as that employed by the C-128 are designed to utilize 512K of RAM, CP/M 3.0 on the C-128 expects to have far less memory. As a result, Perfect Writer must constantly load the software appropriate to the task at hand: CP/M must be booted from one disk and Perfect Writer's main menu from another. Editing, spell checking and printing functions are all loaded from a separate disk.

Perfect Writer will run on either 40- or 80-column monitors. Horizontal scrolling automatically allows text entry of up to 80 logical columns, but the screen margin settings can be changed so that all text can be viewed without scrolling. The software comes configured to run on a single drive, but can easily be changed to accommodate up to four.

The program is designed to circumvent the relatively small workspace allocated for text by means of a system called virtual memory architecture. This lets you work on documents larger than the available memory would allow, while Perfect Writer automatically moves text in and out of disk files. Unfortunately, this is a relatively slow procedure.

Since text can't be scrolled, you must move about a document one screen at a time. It takes 12 seconds to change screens, with occasional lengthy pauses as the disk drive shuttles text to and from the temporary swap file. Using a Gemini 10X printer and Cardco G-Wiz interface, Perfect Writer's printer output program took almost two minutes and 30 seconds to print a 3K file. This was twice as long as it took either Nsweep (a CP/M public domain utility) or WordPro 128 to print the same text.

If you plan to use Perfect Writer frequently, you'd be well advised to invest in a 512K expander. Acting as a RAM disk and loaded with the necessary operating files, the expander virtually eliminates disk swaps and waits. Of course, text files won't be secure unless stored on floppies.

While the prudent user will remember to occasionally pause to save the work in progress, saves to a disk that is either full or covered with a write protect tab will cause Perfect Writer to crash. If this happens, and your C-128 returns to CP/M mode, all text in memory will be lost.

Some users also require data management software. Perfect Filer, a database program designed to be used in conjunction with Perfect Writer, is helpful for maintaining address lists and business records, as well as generating form letters and reports. After using one member of the Perfect Software family, getting acquainted with the next is a breeze. An excellent instruction manual makes it simple to harness the power of this easy-to-use, professional software.

What might be a lengthy chore—designing a form to fit your needs—turns out to be a very simple endeavor because Perfect Filer comes with sample record forms that can be edited or used as is.

Designing a form from scratch simply entails using the cursor keys, following easy-to-understand menus, typing in a label for each entry and leaving a trail of dashes where the data will be inserted.

Data entry and retrieval is straightforward, but slow. Each record is written to disk before the next can be entered, a process that took 13 seconds in one test with a 1571 drive.

Perfect Filer's sort option is powerful, allowing multiple level sorts with a wide variety of options. Data lists can be printed in various formats, including those tailored to match pre-printed business forms. Perfect Writer can then be used to create the formats and merge data into other documents.

Options to share records with yet another family member, Perfect Calc, make Perfect Writer and Perfect Filer part of a comprehensive group of programs that easily live up to the one-word description featured on the program packages . . . Professional. It's too bad that the C-128 can't run them a little faster. *(Commodore Business Machines, 1200 Wilson Drive, West Chester, PA 19380. C-128/$69.95 each, disk.)*

Release The Graphic Designer In You With PrintMaster Plus

A Partner in Design

Jump into the creative process anywhere you choose — graphics, format or copy. PrintMaster Plus is exceptionally flexible. And with over 100 pieces of clip art, 10 type fonts in 5 styles, and 11 border designs to select from, you'll have an endless variety of creative choices to make.

Time and time again, you've wanted to create exciting banners, posters, greeting cards, stationery, or calendars. If only you had the time *and* the budget to complete these projects yourself, you would! Well, now you can. Thanks to the creative power in *PrintMaster Plus* — the innovative new graphic design software from Unison World. In just a matter of minutes, you'll be able to see your great graphic ideas in print!

Best Of All . . . The Price!

PrintMaster Plus is *very* affordable graphic design software. So now you *do* have the time *and* the budget to develop the undiscovered graphic designer in you!

To get your copy of PrintMaster Plus, just ask your local computer dealer.

Available on MS-DOS compatible computers: Commodore Amiga, Atari 520 ST, Commodore 64/128, and Apple II computers.

COMMODORE EXEC *SPEAKS OUT!*

Nigel Shepherd, head of Commodore's North American operations, sees increasing prosperity with the 64/128 line, and other products as well.

Nigel Shepherd took over as general manager of Commodore North America in January of last year. Prior to that, he was general manager of Commodore Australia, Ltd., with responsibility for business in Australia and Southeast Asia.

We caught up with him in his office at Commodore's North American headquarters in West Chester, Pennsylvania, just after the Winter CES in early January. He was quite frank in talking about Commodore's previous financial problems. He remains optimistic about the company's status during the coming year, when they will introduce several new products for the 64/128 computer line, as well as the 128-D and the PC clones.

Earlier this year, Commodore posted its third consecutive profitable quarter. Their most recent quarter in the black represents the company's strongest earnings in over two years and indicates that the much-beleaguered company is on the rebound. We talked at length with Shepherd about Commodore's financial situation, its place in the home computer market, its goals, its marketing strategies and its plans for new products in the coming year.

The 64 is still North America's and the world's best-selling home computer.

RUN: You've been with Commodore North America for about one year. What were your goals for the company when you took the position, and to what extent have you achieved them?

Nigel Shepherd: The first goal was to get the North American company back into profitability by getting the overhead down to an acceptable level and achieving profitable sales. To the degree that Commodore USA has been profitable for the last three consecutive quarters, I think we've achieved that goal.

RUN: What are your goals for the company for 1987?

NS: It's very difficult to return any company to profitability and simultaneously increase sales. I think we've achieved the profitability objective. The second objective for us through 1987 is most definitely to increase sales.

RUN: What's the biggest problem you've had to deal with in this past year?

NS: Boy, that's a difficult one. I think probably the biggest problem occurred in the first half of the year when Commodore was suffering severe financial difficulties. We had to retain the confidence of both the retailer and the consumer, and convince them that Commodore was going to be around on an ongoing basis.

RUN: At the recent CES in Las Vegas, we witnessed a large Commodore presence and much activity and enthusiasm in the booth area. Does this signal a renewed commitment on the part of Commodore to the home computer market?

NS: Our commitment has always been there. What you saw at the CES was a presence we would like to have had in Las Vegas and Chicago in 1986. But we were just financially restrained from doing so. We definitely have an ongoing commitment to the home market, which is always going to be a very large part of our future.

RUN: How do you view that home market in the coming year?

NS: It's still a very viable market. In fact, in dollar terms, we think it's quite possible the home market will increase in 1987.

Four or five years ago, when someone bought a VIC-20 or C-64 for their home, in most cases it was their first computer purchase, so they weren't willing to spend much money. Today, however, as many as 40 to 50 percent of the computers going into the home are second computers, and people do spend more money on a second computer. They generally want to get something better—better quality, better speed or whatever it may be.

RUN: So the role of the Commodore 64/128 line in the home market is primarily as a computer for the first-time purchaser?

NS: Yes, I think it is. There aren't many other computers available in North America in the price range of the Commodore 64 and the 128. The next computer really is the Apple II, which is considerably more expensive. I didn't mention the Atari 65XE or the Atari 130XE, because they're just not a major factor in the U.S. marketplace.

RUN: What were the sales figures for the Commodore 64 and 128 line in 1986, and what is the ratio of sales between these two computers?

NS: The worldwide sales figure for '86 is 2.5 million. The ratio of 64 versus 128 sales is somewhere in the area of 2 to 1 or 3 to 1 in favor of the C-64.

We don't divulge specific unit sales for any models these days, but I think it's sufficient to say the 64 and 128 were very important units to us in 1986. The 64 is still North America's and the world's best-selling home computer. The 128, even on a worldwide basis, would probably hold fourth or fifth spot. To have two machines in the top five is certainly pretty satisfactory as far as we're concerned.

RUN: Obviously, you hope these fantastic sales figures continue. But, realistically, how much life is left in the 64?

NS: If somebody had asked me two years ago what the longevity of the C-64 was, I think I'd probably have said almost two years. It's no secret that we produced the Plus/4 and Commodore 16 because we felt they were going to succeed the Commodore 64 and the VIC-20. And it's no secret that we failed in this attempt because the Commodore 64 was just not going to die.

I think we parallel Apple in that regard. Remember a few years ago when Apple, feeling that the Apple II had a limited life, introduced the Apple III and the Lisa. Both companies have learned that neither the Apple II nor the Commodore 64 is going to die in the short term. We plan on the Commodore 64 being sold three or four years from now, which takes us into the 1990s.

RUN: Do you feel the bundling of GEOS and QuantumLink software has pushed sales of the 64 and 128?

NS: I have absolutely no doubt of that. GEOS is essentially a second operating system that gives the Commodore 64 another dimension. While some users may not choose to buy GEOS, I'm sure a very high percentage of them will.

Packing in the QuantumLink software is also a plus. The telecommunications side of the home computer business really hasn't grown at the rate people were forecasting one or two years ago, but I think the QuantumLinks of this world give the Commodore 64 a third dimension in terms of potential users. I think they make the Commodore 64 a much more attractive package.

RUN: What factors prompted Commodore to bring the 128-D and the PC-10 into the U.S. market from Europe?

NS: When the 128-D was launched—shortly after the 128, in the fall of 1985—the original design didn't pass the FCC. To meet FCC specifications, the 128-D required a fairly complete redesign. Because Commodore was facing other problems at that particular time, we didn't redesign it and launch it into North America. In fact, it's only in the last three to four months that we've completed the redesign so we can launch it.

Another factor in our decision to bring the 128-D into the States is its great success in Europe. There's obviously a demand in the States for a 128 that has a built-in drive and a separate keyboard, and that's aesthetically more a productivity-type machine than the 128 with a separate 1571.

So the success in Europe and the fact that we now have a machine that meets American specifications have led us to bring that machine here. Plus, frankly, a demand from our retailers, who obviously have seen the 128-D at shows and where we sell it in Europe.

The reason for bringing the PC in is similar to the 128-D.

COMMODORE OWNERS... YOU ARE ABOUT TO BEGIN A WONDERFUL NEW LOVE AFFAIR!

NEW for C64!

Since the beginning of the computer boom, folks have been saying what they would *really* love is a program *anyone* can use to perform *everyday* tasks.

PARTNER 64, a cartridge-based product with eight convenient, *memory-resident* desktop accessories, does just that.

Like Sidekick*, PARTNER automagically suspends the existing program in your computer while you are using the PARTNER accessories. When you are through, press a button and PARTNER returns you to the point in your program where you left off.

ACCESSORIES AT YOUR COMMAND:

- **Appointment Calendar and Date Book:** Keep track of appointments and deadlines. At the press of a key, you'll be able to review your appointments for a day, week, or month. Months may be viewed in their entirety in a traditional calendar format, and then printed out.
- **Memo Pad:** Write yourself important notes. Print them out on paper or save them onto disk.
- **Name, Address and Phone Books:** Keep track of important names, addresses, and phone numbers. Available instantly, any time you use your computer.
- **Calculator:** A multi-function calculator with an optional "paper tape" that prints out your calculations on your printer.
- **Typewriter:** Turns your computer and printer into a traditional typewriter.
- **Envelope Addresser and Label Maker:** Use this feature and your name and address list to address envelopes or create mailing labels – quickly, without leaving the software you are working with.
- **Auto Dialer:** At your command, the computer will search through your list for the number you want, and automatically dial the number for you.**
- **Screen Print:** At the press of a key, the text (not graphics) of your computer display will be duplicated on your printer.

OTHER FEATURES:

- **SwiftDOS:** Allows you to access Commodore disk drive commands any time.
- **SwiftLock:** Enter your secret code before you leave your computer. The keyboard will be locked until you re-enter your code.
- **Extended Printer Control:** Allows you to send commands directly to your printer at any time.
- **SwiftLoad:** Allows your Commodore 1541 disk drive to load as fast as the Commodore 1571 disk drive.

Also available for the Commodore *128* computer!

Suggested Retail Prices:

- C64 (64K, 40 Column) . . $59.95
- C128 (128K, 80 Column) $69.95

Circle 168 on Reader Service card.

We have a lot of work to do in the education field to promote the 64.

The PC has been available in Europe for pretty close to two years, and shortly after its launch, it was the best-selling PC in countries like Germany. Even now—two years later—it holds the number two spot to IBM.

In the last two years, we've barely kept up with the demand for PCs in Europe. While that scenario existed, it didn't make sense for us to weaken the European situation by bringing the units into the United States. It's only because the company has improved financially that we've been able to open a new factory in Taiwan in the last three months, and we now have the manufacturing capability to build PCs for North America.

RUN: How do you think the PC-10 will fare in the already crowded U.S. market?

NS: Well, you're correct in saying that the market is crowded. Our philosophy on the PC is that as long as we can make a price-competitive PC clone that enables us to make money, that enables our retailers to make money, then we should definitely be in that marketplace.

We don't have any definite sights set on market share in the PC business. It's a very large business. We believe we can get a good return on investment if we sell somewhere between 60,000 and 100,000 units a year, and we're very confident we can do that.

The PC-10 was released only between Christmas and New Year's, which is probably the worst time to release any new product, and in the first ten days we shipped 6000 units. The demand from our retailers is very positive.

RUN: What about the availability of these products?

NS: The PC-10 is available right now, exclusively through specialist dealers. The 128-D will probably be released here in May.

RUN: What about the availability of some of the other new products we saw at the CES?

NS: We're currently shipping the 1351 mouse. We will ship the 1764 RAM expander in February. We'll start shipping the 1581 disk drive, which is a 3½-inch drive, in March.

RUN: Who do you think will be the typical purchaser of the 3½-inch drive?

NS: At this stage, that unit is aimed primarily at the hobbyist as a mass-storage device. However, we feel it's important to start seeding the 3½-inch drives into the marketplace in large volume. As they're becoming more popular in machines such as the Amiga and MS-DOS computers, the market for 3½-inch drives is increasing dramatically.

We feel that eventually the 3½-inch drives will come down in price, because of the large number being produced. If they come down far enough, then it may make sense for companies using 5¼-inch drives to change over to the 3½-inch.

We want to make sure we have the 3½-inch drives out there and available to companies that produce software for the Commodore 64 and the 128. Then, when the situation does arise—maybe in late 1987 or early 1988—where it's a good move to change over to the 3½-inch totally, the software developers will have software available for the market.

RUN: One of the criticisms of Commodore that we heard at the show was from software developers who complained about the lack of communication coming from the company. Do you see this as a problem in the past, and, if so, what plans do you have to bridge this communication gap?

NS: It has been a problem, caused largely by, again, our financial situation. We cut back overhead fairly substantially, and that included some of our software support people. Now, however, we're getting much closer to our software developers. Mike Brenner, who heads up our software department, is very aware of the need to communicate more closely with developers, and I think our communication in that area has improved substantially.

RUN: With better communication and a tighter relationship with software developers, will we be seeing more dedicated 128 software down the line?

NS: The type of software to be developed in the 128 mode will probably be mainly in the productivity area. The 64 side of that machine has the games. When we looked at this two months ago, we found 40 or 50—or maybe more—excellent productivity programs for the 128 already. There's no shortage right now. I think there are something like a dozen word processors for the 128.

RUN: Are third-party software developers working on software that integrates with the GEOS operating system?

NS: We're certainly starting to see that now. The reason for geoWrite and geoPaint, a couple of really basic packages, is to give the user something to do with GEOS once he opens the box. The whole concept was to encourage other software developers to boot front ends onto their programs to make them GEOS-compatible. The first programs are starting to come out now, and we're going to see others.

RUN: What are Commodore's plans to support the education market?

NS: Our main emphasis in education, as it has been for a number of years, is to promote the Commodore 64 for kindergarten through sixth grade. For these younger children, we believe the Commodore 64 is an excellent value.

We believe that at the top end of the education spectrum—in colleges and universities—the Amiga has a role to play. We have a lot of work to do in the education field to promote the 64, and we have even more work to do to make substantial inroads with the Amiga.

RUN: Is there an attempt to reheat the sales effort for the educational market?

NS: The effort was never cancelled. We certainly did withdraw from active participation in educational seminars, and we didn't have a large education presence in shows and exhibitions. But our education business has always been done through specialist education dealers, and they've remained very active. We're still selling a lot of Commodore 64s, in particular, in the schools.

But, yes, our corporate presence certainly has diminished in the education area, and it has to be resurrected over the next 12 to 18 months.

RUN: Some of the rumors our readers have heard and frequently ask us about are:

We're looking forward to a very exciting 1987—for both the 64 and the 128 product lines.

1. Is Commodore going bankrupt?
2. Does Commodore plan to abandon support of the 128?

Would you address these two questions?

NS: No, we're not going bankrupt.

Until about June 1986, because of a pretty bad financial press (which, quite frankly, was deserved, because we weren't producing results), that may have been a legitimate question. I think that now, with three consecutive profitable quarters under our belt, we're starting to get a much better financial press. If you look at our stock, which reached a low of about 4½ at the beginning of 1986 and is now up over 10, you can see the response to the improved financial press coverage.

With regard to the 128, unequivocably, no—it's not being discontinued. I guess people are inclined to question the future of the 128 because they see it as attacked from two ends.

On the bottom end, you have the Commodore 64, which certainly has been enhanced with the GEOS and Quantum-Link software. That machine has also been given a face lift during the year, so it looks like a more sophisticated computer. From the top end, MS-DOS prices are coming down. They narrow the gap between the PC clones and the 128. I think that's the reason for the questions.

However, 128 sales for us were excellent through calendar 1986, and we know already they're going to be excellent for the first half of 1987. The 128 is an attractive purchase for parents who have older children and want to do some productivity in the home. It does everything you can do on the Commodore 64, but gives you additional productivity. When we have a machine that's perhaps the fourth or fifth best-selling computer in the world, there's no way we're going to abandon it.

RUN: Do you have anything else to say to the *RUN* readers, or would you care to clarify or elaborate on any of the points raised here?

NS: In general, we're looking forward to a very exciting 1987—for both the 64 and the 128 product lines. We think this year is going to be at least as successful as 1986, and probably even more so. We think there'll be more accessories and more software coming out for the C-64 and the 128. You're going to see more aggressive advertising for the product line as well, and both the 64 and the 128 will be given a far higher profile in 1987 than in 1986. We're very happy with both product lines, and they obviously figure in our long-term plans.■

Copy Worldwide Short-wave Radio Signals on Your Computer

Remember the fun of tuning in all those foreign broadcast stations on the short-wave radio? Remember those mysterious sounding coded tone signals that baffled you? Well, most of those beeps & squeals are really digital data transmissions using radioteletype or Morse code. The signals are coming in from weather stations, news services, ships & ham radio operators all over the world. Our short-wave listener cartridge, the "SWL", will bring that data from your radio right to the video screen. You'll see the actual text as it's being sent from those far away transmitters.

The "SWL" contains the program in ROM as well as radio interface circuit to copy Morse code and all speeds/shifts of radioteletype. It comes with a cable to connect to your radio's speaker/earphone jack, demo cassette, and an excellent manual that contains a wealth of information on how to get the most out of short-wave digital DXing, even if you're brand new at it.

For about the price of another "Pac-Zapper" game, you can tie your Commodore 64, 128 or VIC-20 into the exciting world of digital communications with the Microlog SWL. $64. Postpaid, U.S.

MAIL ORDER MAXIMS

Become a satisfied customer by learning the ins and outs of shopping by mail.

By CHRISTINE ADAMEC

My husband and I ordered our very first computer by mail back in 1976, and I still remember our anticipation and awe as we reverently unpacked our brand-new Commodore PET. We'd had typical first-time mail order fears: Would it really work? Had we been crazily impulsive to order such an expensive product by mail? But our fears were groundless. It did work! And we loved it.

We've been buying computer products through the mail ever since, with minimal problems. You, too, can become a satisfied mail order customer if you follow a few guidelines.

There's a big demand for computer products in the booming mail order business. According to Maxwell Sroge, a leading mail-order consultant based in Chicago, computer items represent the fastest-growing segment of the multibillion-dollar mail-order industry, with a yearly expansion rate of about 30 percent.

This article will discuss the pros and cons of ordering by mail and provide hints on how to prevent problems. I'll also describe techniques to use when your best efforts fail and you're still unhappy with an order.

Advantages of Mail Order

One big plus of ordering by mail is the diverse selection of products available. Says consultant Sroge, "Computer manufacturers are cranking out marvelous products today, and you can find a wide selection of new merchandise through mail order. Retailers are cherry-picking the line and are far more limited on what they can stock."

Another major advantage is price. Many mail order companies discount prices 25 percent or more, and you won't pay sales tax on your item unless the mail order company is in your state and your state imposes a tax.

Of course, convenience is another attraction—you don't have to leave the comfort of your home to place an order. You can even shop while a blizzard is raging outside.

What about support if you should have a problem or a question? This may or may not be adequate through mail order, depending on your situation. Over-the-phone advice is usually available, and major firms staff full-time technicians to assist you, whether you're a complete novice who just received a computer for your birthday or the kind of person who enjoys dismantling your disk drive to insert a ROM chip. However, if you need to see the product before ordering it, or if you want to be able to discuss problems you're having with it in person, then mail order is probably not for you.

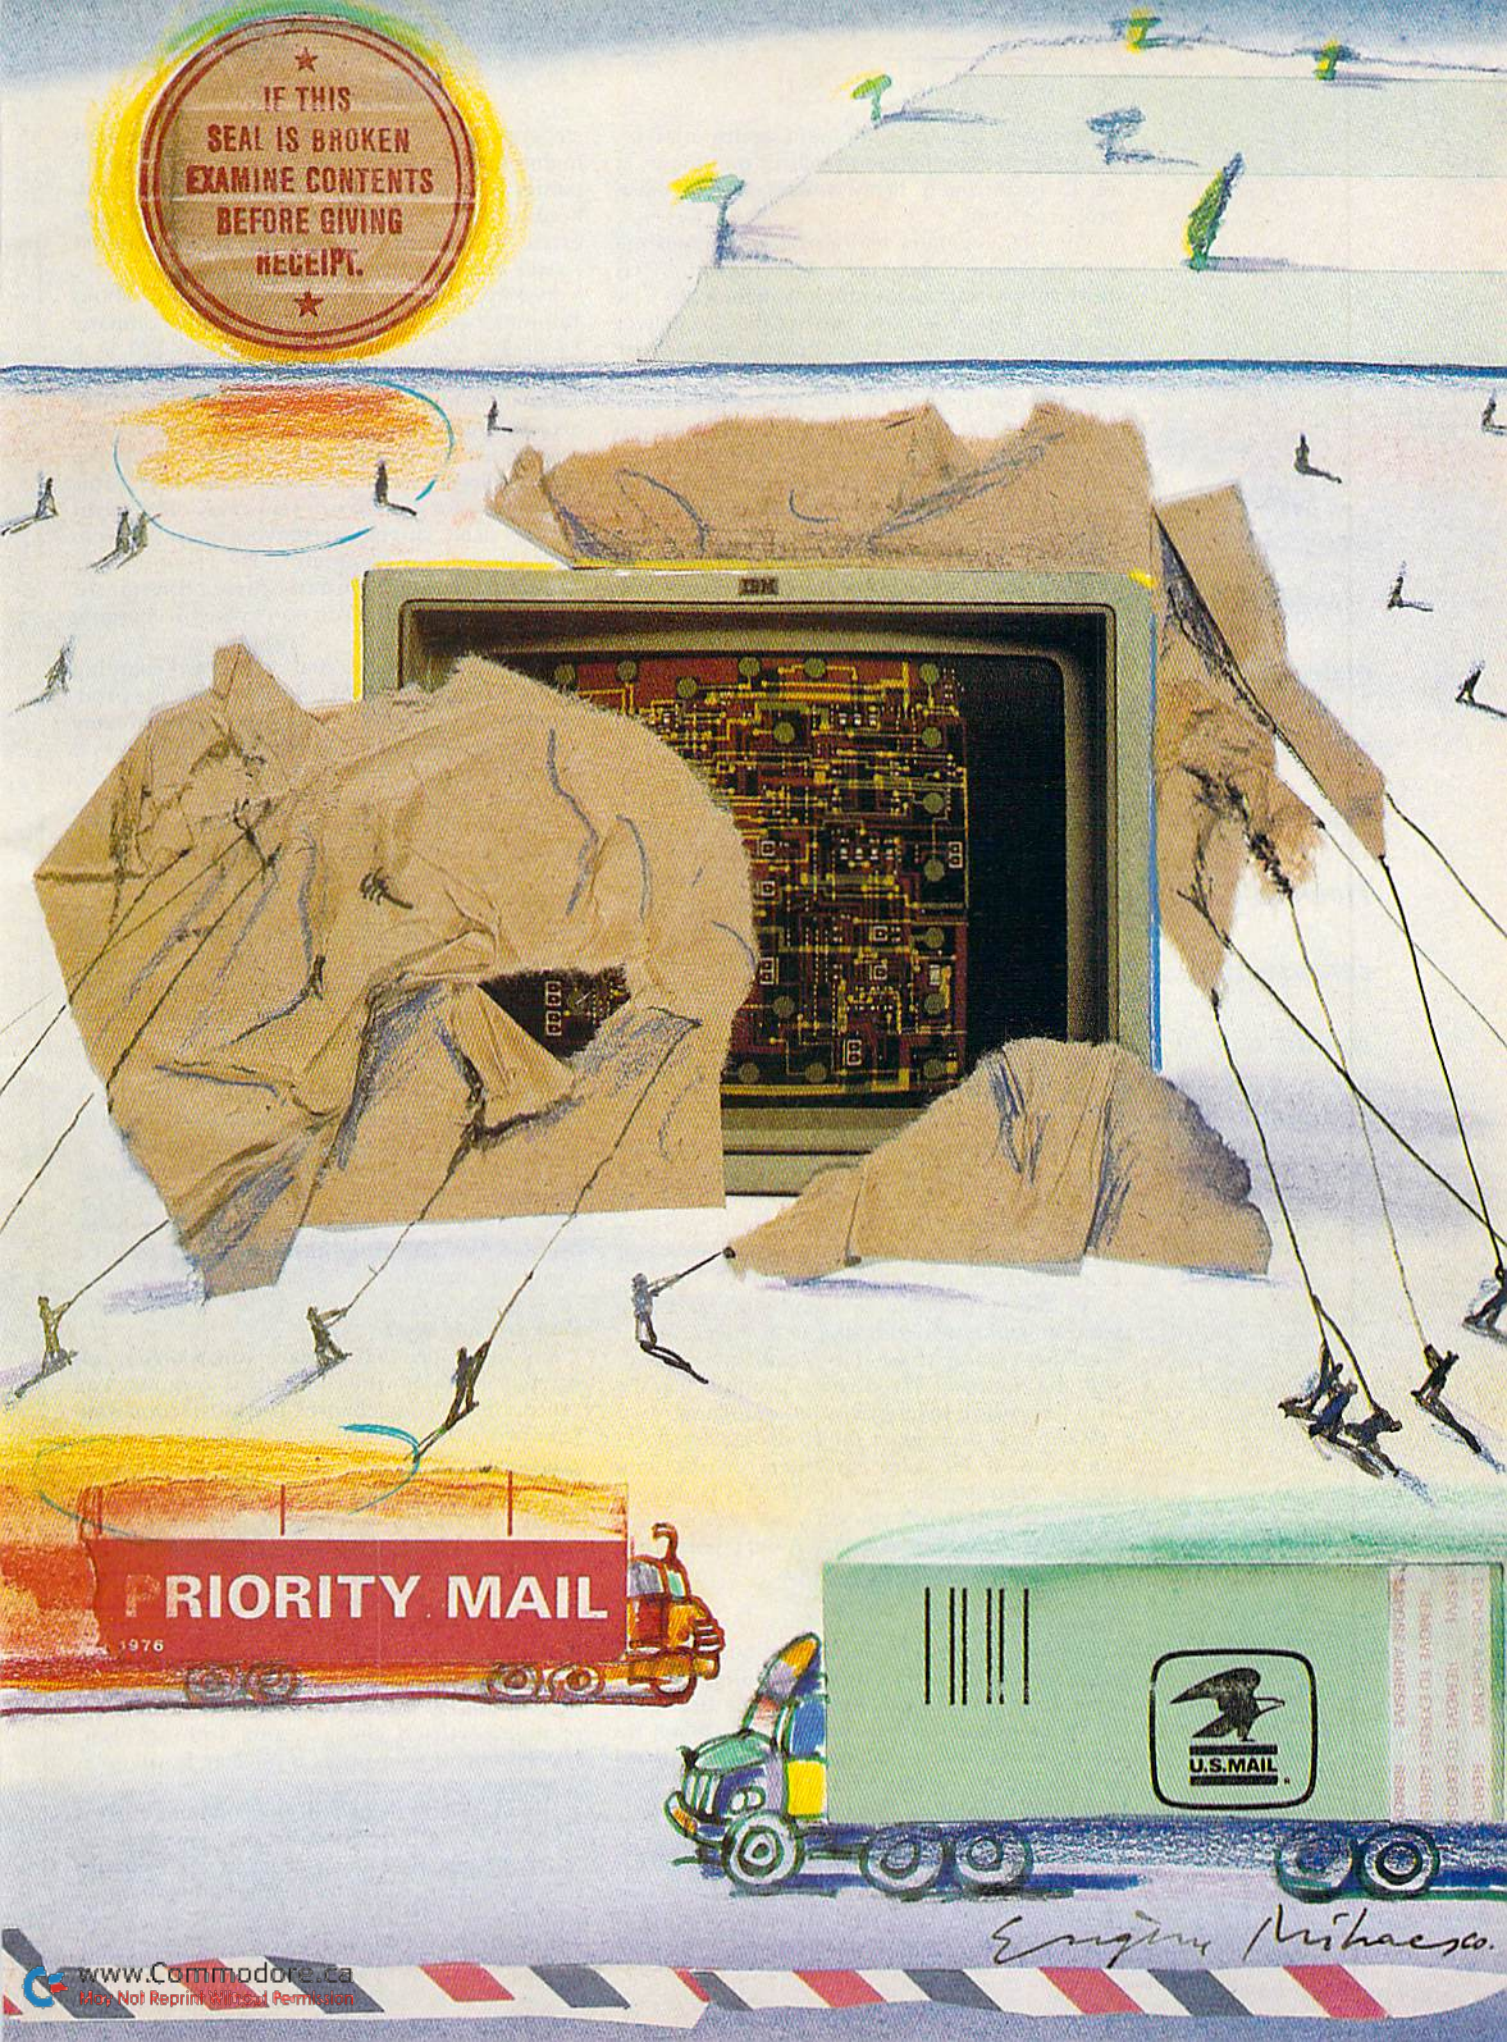
While mail order is never going to be as fast as going right to the store yourself, most companies strive to deliver as quickly as possible. Says president David Pomije of Pro-Tech-Tronics in Minneapolis, "If you order by noon and the item is in stock, it goes on the UPS truck by that afternoon. You should receive it within five to ten business days." Be aware, however, that if you pay by personal check, most companies will wait at least two weeks before shipping your order, to make sure the check clears.

Disadvantages of Mail Order

According to Vada Martin, a research analyst with the Federal Trade Commission (FTC) in

www.Commodore.ca
May Not Reprint Without Permission

ILLUSTRATED BY EUGENE MIHAESCO



www.Commodore.ca
May Not Reprint Without Permission

Washington, DC, key complaints against mail order firms include failure to deliver on time or at all, to issue timely delay notices and to make proper refunds.

The FTC regulates mail order companies under the "mail order rule." This regulation requires firms to state prominently in their ads how fast they ship orders, or, barring that, to deliver the product within 30 days of receiving an order and payment.

If they can't deliver on time, the company must notify you that there's a problem and give you a new shipping date. When you receive this notification, you can either cancel your order and receive a full refund, or you can agree to the new date.

It's also important to know that if you cancel a prepaid order, the FTC requires the firm to refund your money within seven business days. If you paid by charge card, they must adjust your account within one billing cycle.

Note that the mail order rule is limited to actual *mail* orders. Phone orders are not covered.

. . . most mail order firms are good guys in white hats. However, . . . consumers should still be careful.

Reputable or Not?

The Direct Marketing Association (DMA), a New York-based trade association for the mail-order industry, recommends that you deal only with reputable companies. If the XYZ Corporation, which you've never heard of, suddenly offers a special deal that's 50 percent lower than everyone else, don't jump right in! First, check it out, especially if you're placing a large order. Consult the Better Business Bureau in the city where the firm is located.

The DMA also recommends reading computer magazines for information about mail order firms, and a recent DMA "action line" on computer purchases suggests you look for "company names that come up again and again, whether for good value and service or for problems and headaches." [Note: *RUN* magazine has a customer service representative to investigate consumer complaints about its advertisers.]

Another precaution to take before ordering from an unknown company is to check with a local user's group to see if its members have dealt with the company. Was delivery prompt? Was the firm responsive to questions or complaints?

When you do contact the company, ask about the terms of the sales agreement on the item you're interested in. Says the DMA, "Is there a warranty? Where will you get your questions answered at 10 PM Sunday night? A toll-free hotline, with 24-hour service, is a big plus."

Advice from the Pros

People actually in the mail-order business have valuable advice to offer on determining whether a company is reputable. Roger Dooley, president of Tenex Computer Express in South Bend, Indiana, is convinced that most mail order firms are good guys in white hats. However, he says consumers should still be careful.

His first recommendation: Read the fine print in every advertisement. "We've seen an ad for a very low-priced product, and then in the fine print at the bottom it said there was an 8 percent markup! Another 3 percent was added if you used a charge card. So the actual price was 11 percent higher than the price in bold letters!" (Many companies do charge extra for using a credit card, because the credit card company charges *them* extra. Be careful, though, for they shouldn't charge you over five percent.)

Dooley also advises consumers to ask about shipping costs. "Shipping might cost a company $4 or $5, when they're charging you $29 as a hidden extra fee."

David Pomije thinks it's a good sign if a firm accepts credit card payment. According to him, credit card companies have recently instituted a policy whereby only computer mail-order firms in business for at least two years may offer credit card service. "This has weeded out many problem companies," he comments. He recommends ordering from a company displaying credit card emblems, even if you don't plan on charging your order.

Pomije also observes that credit card charging protects customers if they don't receive the product they've ordered. "The credit card company will sometimes issue a credit, and then they'll contact the mail order firm and tell them the customer didn't receive the goods." Of course, when you don't receive an item, your first step should be to check with the mail-order company.

Another indicator of a mail-order company's character is how they treat callers. Peter Sattler, president of Tussey Computer Products in State College, Pennsylvania, says, "Are their people genuinely informative and polite? Their attitude tells you whether or not the company has its act together, and is a good indicator of how your order will be handled."

Pomije says he feels another sign of reputability is putting out a catalog. "A catalog usually indicates a company that's been around awhile."

A final sign of good service is a toll-free number for ordering. Says Pomije, a toll-free number "suggests that the business is at least somewhat solvent, because they had to go through AT&T to get a clean 800 number."

Basic Do's and Don'ts

Say you've decided to place a mail order, and you feel confident the company is a winner. You can optimize your chances for satisfaction with your order by following these basic rules:

1. When you place the order, ask for the delivered price and for a shipping date and estimated date of arrival. Also, write down exactly what you're supposed to be getting, so you can compare it with what actually arrives.
2. Don't send cash! (Yes, people do that.) It might get lost or stolen, with no one accountable. Send a check or money order, or use your credit card.
3. When sending your order, provide a complete description of what you want. "We sometimes receive certified checks—and nothing else," says Pomije. If your order is unclear, it will delay shipment.
4. If you haven't dealt with the company before, Maxwell Sroge recommends that you test the waters by placing a small order. If you're happy with it, then you can place a larger one with more confidence.
5. Be sure to ask when a credit card charge will

Circle 26 on Reader Service card.

actually be levied: when the product is shipped, or when the company receives your order. "We don't charge until an item is actually shipped, but some companies charge you immediately," says Roger Dooley.

6. Unless low price is the overriding factor, avoid mail order companies that sell everything from tractors to tractor feeds. Instead, buy from firms that concentrate on Commodore products or computer products in general. These companies will have a better understanding of your needs.

Handling Problems

Suppose you have ordered an exciting new program, or maybe a printer. It arrives, and it doesn't work. Should you throw up your hands and scream?

Says Roger Dooley, "Sometimes a product isn't truly defective when a customer is having difficulty using it. We encourage people to check in with our customer service staff prior to returning a product, because frequently we can resolve the problem immediately over the phone."

David Pomije agrees and says, "In the mass merchandising electronics field, about 50 percent of returned products come back because of customer error—they didn't know how to hook it up or something else. We have both customer assistance and technical support departments to handle questions consumers may have."

But maybe the product *is* defective; reputable companies admit this is true of about 1 or 2 percent of the items they sell. You should be able to return the item for a refund or receive a replacement, as long as you act promptly within the warranty period.

If you decide to send the product back for repair, always call first. When you describe the defect to the customer service person, be sure to write down his or her name, as well as the date, the nature of the problem you described and what you were told to do. Then enclose a letter with the returned product and reference the person you talked to, the problem you talked about, and so forth.

What if your order never arrives? Most computer companies are computerized themselves, and they should be able to track the status of your order rapidly. If the item was shipped through United Parcel Service but never arrived, the company will request a tracer on the package. Sattler warns, however, that "UPS is not computerized and has an enormous paperwork system. They make us wait at least two weeks to trace a package, so take that into account on a nondelivery complaint."

Dooley recalls a humorous incident when a customer insisted he'd never received his hardware, although UPS had a signed receipt. The mystery was soon solved: His cleaning lady had signed for the package, put it in the garage and then forgot to tell him!

If you feel frustrated with a firm's customer service people and your complaint is still unresolved, whether it's nondelivery, a defect or some other problem, Pomije recommends asking for the president or owner of the firm. "He'll generally be willing and eager to help you." Pomije takes customer calls that can't be resolved otherwise, and he feels most other company heads will listen and try to help when the normal channels don't work.

If a Company Won't Help

You've tried everything; letters and phone calls have been ignored, and even the head of the company wasn't interested. Time to take action!

Ask the Better Business Bureau, either local or national, for the address of the Better Business Bureau in the city where the delinquent company is based.

You should also contact your state consumer bureau and request the necessary forms for a formal complaint. Describe the problem as simply as possible (they may know nothing about computers!), and include copies of relevant information. Ask them for the name and address of the consumer agency in the state where the mail-order company is located, and write to that agency also.

Another possible route is through any local or regional newspapers that may provide "help" columns, where consumers can air complaints. The paper will call all over the country to help you resolve a problem, and, since any business detests bad publicity, a firm that's ignored you in the past may suddenly respond.

If you received a defective product through the U.S. Postal Service, the FTC recommends that you complain to your Postal Inspector for an investigation of possible mail fraud.

When you have a complaint against a company, the FTC wants to know. However, they can't act on individual complaints. According to Vada Martin, the Commission is "directed to act in the public interest where patterns or problems involving numerous consumers are found to exist." However, if a company is treating you unfairly, it seems likely they're doing it to others as well, so a letter to the FTC would be in order.

You should also relate your complaint to the Direct Marketing Association in New York. They want to know about the problem companies that tend to give everyone else a bad name. And don't forget to notify the magazine that carried the ad.

Run to your dealer to check out this GREAT SOFTWARE

"...everything a good compiler should be...easy to use...efficient...offers a good range of optional features...excellent documentation...inexpensive."
Tom Benford, Commodore Magazine

Give your BASIC programs a boost!

Basic Compiler

Now anyone can speed up their BASIC programs by 3 to 35 times! Basic-64 and Basic-128 easily converts your programs into fast machine language or speedcode (takes up less space yet protects your programs from prying eyes) or a mixture of both. You can even compile programs written with extentions—Simon's Basic, VICTREE, BASIC 4.0, VideoBasic and others. When the compiler finds an error, it just doesn't stop, but continues to find any other errors as well. Supports overlays and has many other options. 128 version works in FAST mode and allows you to use all 128K of memory. If your program walks or crawls, give it the speed to *RUN!*

for C-64 $39.95 for C-128 $59.95

Super C

C is one of today's most popular languages. It's easy to transport C source code from one computer to another. With ***Super C*** you can develop software or just learn C on your Commodore. ***Super C*** is easy to use and takes full advantage of this versatile language. Produces 6502 machine code and is many times faster than BASIC. Includes full-screen editor (search, replace and block operations), compiler, linker and handbook. Combine up to seven modules with the linker. Besides the standard I/O library, a graphic library (plot points, lines, fill) and a math library (sin, cos, tan, log, arctan, more) are included. Whether you want to learn C, or program in a serious C environment for your Commodore, ***Super C*** is the one to buy.

"...easy to use package with more power than most users should need...ultra-fast compile and link times make program development effortless." Adam Herst, Transactor

for C-64 $59.95 for C-128 $59.95

Cadpak

Design pictures and graphics quickly and precisely. Unlike other drawing programs, you can produce exact scaled output on your printer. Design in the units of your drawing problem (feet, miles, meters, etc.) and send hardcopy to most printers. Uses either the keyboard or a lightpen. Two separate work screens—transfer artwork from one screen to the other. Place text in four sizes anywhere in the picture—three extra fonts included: Old English, 3-D and Tech. "Try Again" functions allows you to undo a mistake. Solid or dashed lines, circles, ellipses at any angle, rays and boxes. Save and edit fill patterns, fonts and objects. ***Cadpak*** is the full-featured design package for your Commodore computer.

Circle 8 on Reader Service card.

There are numerous good-sized and reputable companies selling computer products by mail.

They have a vested interest in keeping their readers happy by avoiding disreputable advertisers.

Bankruptcy

What if the company goes bankrupt? Is all hope lost? "No," says Neil Buchalter, a Titusville, Florida, attorney who specializes in bankruptcy cases.

In the light of the federal bankruptcy code, Buchalter claims, it's probably better for the consumer if a firm files for bankruptcy than if it merely ceases to do business. "If they just shut their doors," he explains, " it's basically first come, first served, and you have to file a lawsuit to try to collect. That can be difficult when the company is out of state."

Buchalter says that if a company files for bankruptcy before you receive your order, you should receive a notice from the bankruptcy court. "At that point, you file a proof of claim form with the court, setting forth the amount you paid and what you purchased. He recommends that you include proof of payment, such as a copy of your credit card bill or cancelled check."

Buchalter adds, "People who paid for products they haven't received are entitled to a priority claim of up to $900 before other categories of creditors. If your claim exceeds $900, the amount in excess falls into a lower priority category.

"You don't need to hire an attorney to file a proof of claim," he continues. "Some courts will mail you the claim form and instructions, and it's easy to complete." Also, filing is free.

Buchalter does caution that consumers won't receive "a hundred cents on the dollar," but they should receive some amount, depending on the individual case. Cases may be resolved in six months, or they can take years.

What if you think a company has gone bankrupt, but no one has notified you? "Call the company and ask them," says Buchalter. "If they receive hundreds or thousands of calls from customers, they'll want it to stop. When they file for bankruptcy, they're protected by a court order saying creditors may not harass them or try to collect from them. It's to their advantage to notify all concerned."

Give It a Try

Buying software and hardware by mail order can be a money-saving, time-saving and generally satisfying experience. As consultant Maxwell Sroge says, "There are numerous good-sized and reputable companies selling computer products by mail."

I plan to continue buying by mail—and complain if I'm not satisfied. Mail order may work for you, too! ■

$19.99 PARAMETERS R' US (100 pack)

The Newest and Most Effective Parameter Copier to date, is now ready for shipping. Parameters R' Us, will ELIMINATE all the protection of the most popular and most protected software available for the C-64/128. Parameters R' Us is completely menu driven and easy to use by anyone.

FEATURES INCLUDE: works in seconds, eliminates protection, menu driven, works on 1541 and the 1571, copies made are fully compatible with 3rd party drives, and updated every 2 months. Now available for the Atari ST $24.95.

$4.99 PARAMETERS R' US (10 pack)

The 10 pack is for those that can't wait 2 months for the next release of the next (100 pack). This package will be released every 1 to 2 weeks and will include those titles that were just released.

$9.99 PARAMETERS R' US (GEOS pack)

This Parameter disk was designed just for GEOS and all its Utility packages. Not only will it eliminate the protection, but will also allow use of GEOS UTILITIES (desk pack, writers workshop, geo dex) with any GEOS that has been FIXED with this set of parameters.

$9.99 PARAMETER KRUNCHER

Takes the protection out of Keymaster keys and Fast Hackem parameters and allows you to compile 600 keys and/or parameters on a disk.

$29.99 LOCK PIK C64/128 (The Book)

Lock Pk 64/128 was put together by Utilities Unltd. as a tool for those who have a desire to find out how the heavy Hackers do it. This package includes:

1. Lock Pik book that gives you step by step instructions on BREAKING or backing up over 100 popular programs using Hesmon and Superedit. The instructions are so clear and precise that anyone can use it.

2. Lock Pick disk has Hesmon 64, Superedit, Disk Compare, Kernal Save, I/O Save, and Disk File log with detailed instructions on how to use these programs all on 1 disk.

3. We also have a limited supply of Hesmon cartridges that will be given out free while supply lasts.

I think you will agree this is the best buy to come along in a long time, you get it all for $29.99.

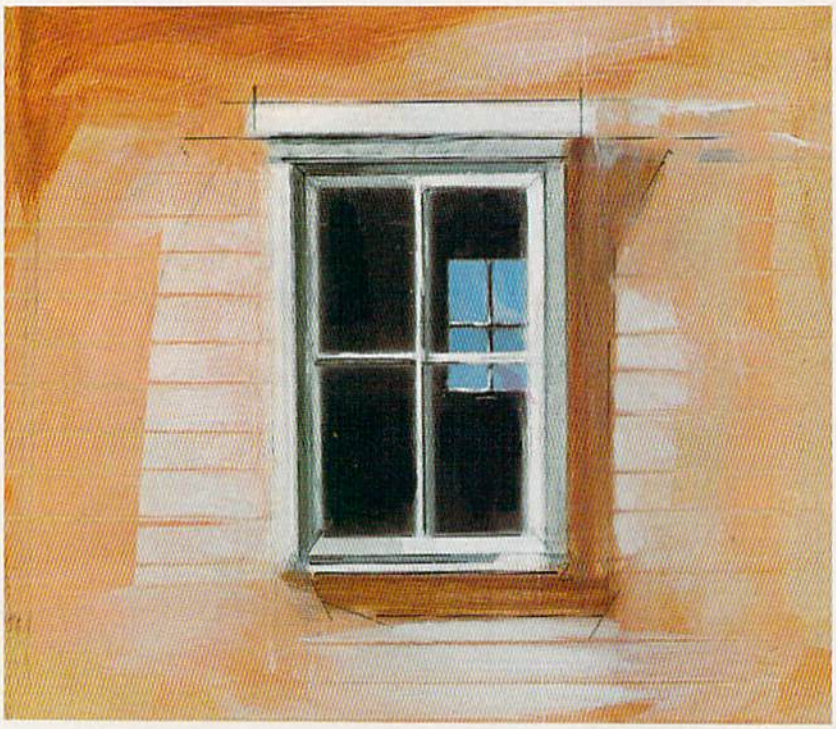
C-128 Custom Windows

Create dazzling and useful windows of virtually any size on your 80-column screen.

By FREDERICK GODDARD



I've long envied the Amiga's ability to create temporary windows that allow you to view the disk directory or list a program without disturbing the original screen display. To take advantage of the C-128's similar capabilities, I designed 80-Column Custom Windows, a utility that gives C-128 owners access to Amiga-like windowing feats. It will not turn your C-128 into an Amiga, but it will allow you to create temporary windows with either Basic or direct keyboard commands.

This utility is lightning fast and provides up to eight bordered windows with a shadow, or 3-D, effect. You can enter commands in the windows, list and change lines in a program, display a disk directory and enter the machine language monitor. 80-Column Custom Windows doesn't alter your computer's operating system in any way. When you're finished with the windows, you can erase them, leaving the original screen intact.

Getting Started

Type in Listing 1 and save it to disk. This listing creates a machine language program called Custom Windows on the disk. When you load and run Custom Windows, the screen clears and a title box appears, telling you that the program is active and you have 96,765 bytes free. This machine language version loads and runs like a Basic program, so if you save it as an autoboot program, be sure to identify it as being in Basic.

Listing 2 is a short demo program that shows you how you can use Custom Windows. Once you have the Custom Windows program on your disk, type in and run Listing 2 to see an amazing demonstration.

How It Works

Custom Windows occupies specific memory locations at 7169–8785 ($1C01–$2251). The beginning of Basic is moved up to 16385 ($4001) with a Graphic1:Graphic5 command. Some of the variable memory in Bank 1 is reserved to store the screen text and attributes underneath the windows you create. The default value for this allocation is 16K, but you can poke a different amount if you wish (as little as 4K or as much as 32K). It takes 2K of memory to create a temporary window that covers half the screen, so the default value of 16K is ample.

The program thus lets you open up to eight 80-column temporary windows at a time; when the windows are closed, the original screen will reappear intact. Each window has a number (1–8) displayed in the upper-left corner. The procedure for opening a window is the same whether you use Basic or direct keyboard commands.

ILLUSTRATED BY GWYN STRAMLER

TEST DIVE ONE FOR YOURSELF.

In their day, they ruled over three quarters of the earth's surface.

During WWII, they viciously brought Britain to her knees. And Japan to the ground.

These were the silent killers: Tench. Gato. U-Boat.

And now, they return. In this, the most realistic, all-encompassing simulation ever created for the personal computer.

You will command one of six types of American subs or German Kriegsmarine U-Boats, during any year from 1939 to 1945. You'll perform one of over 60 missions. Or you'll engage in the most difficult task of all: To make it through *the entire war.*

Each vessel is completely unique and painstakingly authentic, so you'll have a lot to learn: Navigation. Weather. Radar.

And the contents of a vital target book, among other things.

Your arsenal will include deck and anti-aircraft guns. Torpedoes. And mines.

But even all that may not be enough.

Because besides the risk of bumping a depth charge or facing a killer Destroyer, you'll still have to contend with the gunfire of enemy aircraft.

No simulation has ever had the degree of authenticity, gut-wrenching action or historical accuracy of this one.

The first release of our new Masters Collection. And a challenge of unbelievable depth.

www.Commodore.ca
May Not Reprint Without Permission

To open a window, you first set the color. In Basic you can use either the Color or Print command to do this; in Immediate mode, you use the control and logo keys, along with number keys 1–8. You get the most attractive results if you choose light shades. (Dark shades nullify the shadow effect.)

Next, set the size and location of the window. Use the Window command in Basic or position the cursor at the top-left corner of the new window and press ESC T; then position the cursor at the bottom-right corner and press ESC B. Be sure to allow two extra columns and rows for the border.

Third, open the window using the commands listed below. When you issue a command to close a window, the last window opened will be closed, and the screen will display the text that existed before that window was opened.

To use Custom Windows in a Basic program, insert the following lines at the beginning of the program:

```
2 GRAPHIC1:GRAPHIC5
3 BLOAD"Custom Windows"B0,P7169
4 X=16:POKE 7194,X:SYS7197:CLR
```

Line 2 sets the start of the Basic program at $4001 to allow space for Custom Windows. Line 3 loads Custom Windows. Line 4 sets the number of kilobytes to be allocated for window memory. (The default is 16; change the value of X to another number from 4 to 32 to allocate less or more Bank 1 memory for this purpose.) Line 4 also executes SYS 7197 to activate Custom Windows and set variable pointers.

Command Options

Activate the program. Clears the screen, prints a title box indicating the number of bytes free, sets the pointers to the next window, redefines the run key, and sets an interrupt wedge for direct keyboard commands. In Basic, use SYS 7197. You can activate the program without printing the title box with SYS 8442. If you're going to use the program exclusively as a Basic program subroutine and don't want to activate the interrupt wedge for direct keyboard entry, use SYS 8220.

Open a window. In Basic, use SYS 7200. Direct from the keyboard, simultaneously press the control and stop keys.

Close a window. In Basic, use SYS 7203. Direct from the keyboard, simultaneously press the logo and stop keys. (You should always execute a Print command after you close window 1 from Basic.)

Reset pointers and enable interrupt. In Basic, use SYS 8364,1. Direct from the keyboard, simultaneously press the shift and stop keys. Resetting the pointers locks in existing windows and also sets the next window to be opened at 1.

Reset pointers and disable interrupt. In Basic, use SYS 8364,0. Direct from the keyboard, simultaneously press the ALT and stop keys.

Reset (interrupt unchanged). In Basic, use SYS 8220.

Enable interrupt (pointers unchanged). In Basic, use SYS 8319.

Disable interrupt (pointers unchanged). In Basic, use SYS 8371.

Open a directory window. Puts a special window on the screen designed for directory displays. The left edge of the window is in the column in which the cursor was located when the command was issued. You must issue a separate Directory command to display the disk directory in this window. In Basic, use SYS 8666. Direct from the keyboard, simultaneously press the control and ALT keys.

Limitations

If you try to open a ninth window, the program will ignore the command. It will also ignore a command to open a window if there isn't enough memory in Bank 1 to hold all the text and attributes under the new window, or if the window has fewer than four rows or eight columns.

When you issue a Close Window command, the last window opened will be closed. That is, if you have three windows on the screen, it is not possible to close window 2 before closing window 3. If you use Custom Windows in a Basic program, you must, after closing window 1, issue a Print command to set the screen pointers before you can open any new windows.

When you use direct keyboard commands (as opposed to Basic commands), the program works through an interrupt wedge. This produces ghost cursors on the screen if you use different colors for the windows. These cursors won't affect the validity of the screen text, but they will be obvious.

You can minimize the ghost cursors by applying the following two rules. First, never open a window with the cursor in the left-most or right-most column of the window. A simple cursor-right key entry before the Control/Stop command generally will fix this. Second, always change the character color to the previous window's color and clear the current window before issuing the Close Window command (logo/stop).

Finally, you can load and run a program with Custom Windows activated as long as the program doesn't overwrite Custom Windows in memory locations 7169–8785. This means that you can't run programs that use 40-column, high-resolution graphics while Custom Windows is active. Before running any commercial software or programs that use such graphics, reset the computer by pressing the reset button or the stop and restore keys.

80-Column Custom Windows is a very useful and attractive utility. I've put it to work as an autoboot program on all my disks, as it's very helpful when I'm writing programs or cleaning up disks. I hope you have as much fun with it as I have. R

Frederick Goddard (4828 NW 17th Place, Gainesville, FL 32605) is an economist on the faculty of the University of Florida. His job includes developing computer applications for schools, and he has written several programs for the Apple and Commodore computers.

Make Any Computer Do Exactly What You Want With McGraw-Hill's

Contemporary Programming & Software Design Series

Make no mistake. Almost all books and courses on "programming" teach you only the final 5% of the total programming process—namely, how to code in a specific language . . . information of little value if you don't know how to reach the point in the programming process when you are ready to code.

With the Series, however, you'll learn to create your own programs from scratch, even modify off-the-shelf programs. You'll learn enough BASIC and machine language to get you started on the remaining 5% of the programming process.

From Writing Your Own Programs to Modifying Existing Software, Here's the New, Easy, and Low Cost Way to Unlock the Secrets of Your Computer

Whether you use computers for business, for personal applications, or for fun, off-the-shelf programs will never do everything you want them to do for you. That's because they were written by programmers to satisfy what they perceived as the needs of the greatest number of potential users—often missing some or many of your specific needs.

That's why McGraw-Hill's new Contemporary Programming and Software Design Series teaches you how to create your own software . . . either from scratch or by making key modifications to existing programs.

There is nothing magical about it. You learn the process of building a computer program step-by-step with McGraw-Hill *Concept Modules* sent to you one at a time, once a month. Each of the ten modules in the Series takes you through an important step in the development of the structure and detailed logic of a program, including testing, debugging, and documentation.

Build Your Own Personal Software Library

The sample programs you work with throughout the Series are excellent learning tools. But they're more than that. By combining the sample programs onto one master disk, you'll have the start of your own personal software library. In addition to the programs you've written and modified throughout the Series, you'll also receive dozens of the most popular public domain and user-supported programs, such as data base manager, word processor, calendar generator, appointments reminder and much, much more.

15-Day No-Risk Trial

To order your first module without risk, send the card today.

Examine the first module for 15 days and see how the Series will help you make your computer do exactly what you want it to do!

Unique Interactive Hands-On Instruction

Each module includes an easy-to-understand guide PLUS a 5¼" floppy disk containing typical programs and interactive instruction that you can run on Commodore 64 and 128 computers, IBM PCs and PC compatibles for hands-on experience.

In the first Module, for example, when your sample program (Declining Interest Loans) appears on your screen, you'll find errors on certain program lines. You'll also see that the program is only three-quarters completed.

Now comes the fun part. You'll discover how this program is built, and in the process you'll learn how to identify and correct errors. And by the end of Module 1, you'll actually have completed this program yourself.

But there's more. Special graphics on your screen work in conjunction with the accompanying guide to amplify, illustrate, and deepen your understanding of software design principles.

If someone has beaten you to the card, write to us for ordering information about the Contemporary Programming and Software Design Series.

The Crucial 95%—Learn the Foundation of Computer Programming

While the Series includes interactive disks that run on specific computers, everything you learn you can apply to any language or machine. Why is this possible? Because McGraw-Hill knows programming is far more than coding a program into the computer using a specific language. In the real world of computers, 95% of the programming process is carried out using design techniques that are independent of specific language or machine. It is this crucial 95% that you thoroughly understand and master in the Series.

Two-On-Two Basketball Action

One-on-one is OK for a little practice, but real basketball is a **team** sport. To be really good at it, you need **all** the skills – passing, dribbling, shooting, stealing and rebounding. That's what it takes to win a championship. That's what **GBA Championship Basketball™: Two-on-Two™** delivers.

From the roar of the crowd to the swish of the net, from slam dunks to three-point shots, it's all here – fast and competitive.

Not only is there **team** action, but you can even compete in a 4-division, 23-team league – all the way to the playoffs and the GBA Championship game!

When you're ready to jump into the big leagues of computer basketball, start with the game that begins where the others leave off – **GBA Championship Basketball: Two-on-Two.**

Commodore Amiga screen shown.

"...the best arcade basketball game I've seen. If you liked *One on One*, you'll *love* this..."
– Randy Chase, *Guide to Computer Living*

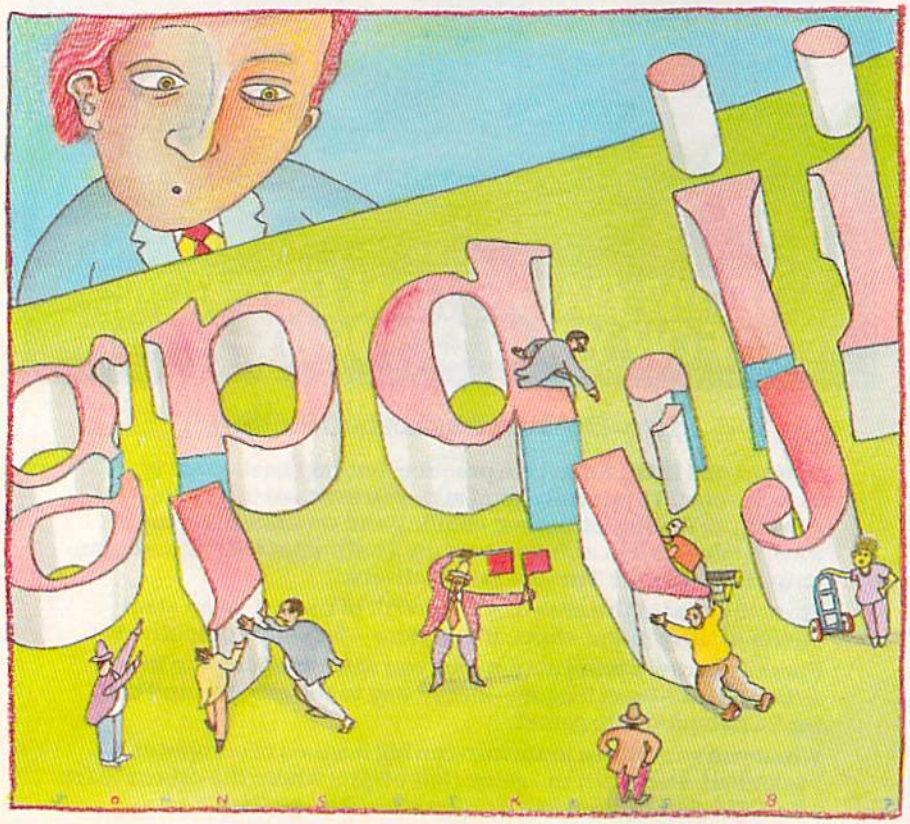
PRINTRITE 64

Treat your printer to the true descenders that make the difference between a professional-looking document and a dud.

By BOB KODADEK



From your experience with typewritten or printed material, you know that some lowercase characters (g, j, p, q and y), the comma and the semicolon have "tails" extending below the base of the printed line. These are called descenders.

Unfortunately, some Commodore dot matrix printers, such as the 1525, MPS-801 and MPS-803, use fonts in which the punctuation marks and characters with descenders are moved up above the printed line, making them look unnatural and sometimes difficult to read. Although adequate for rough drafts, this type of print is unsuitable for formal documents or correspondence. These printers also lack a much-needed underline command.

PrintRite 64 is a handy C-64 wedge program that adds true descenders to the lowercase letters and punctuation produced by the 1525 and MPS-801/803 printers. It also creates the missing underline command.

As an added bonus, PrintRite 64 is designed to boot RUN Script 64 Version 1.0 (*RUN*, March and April 1986). It can also function in Immediate mode and be accessed by any Basic or machine language program as long as certain command restrictions are observed.

Using PrintRite 64 with RUN Script 1.0

Type in the basic loader program (Listing 1). Any time you wish to use PrintRite 64, just load and run this program.

PrintRite 64 will prompt you with LOAD RUNSCRIPT? (Y or N). If you answer yes, the program asks for the device number. You then insert a disk or tape containing RUN Script and press 1, 8 or 9, as appropriate. The program searches for and loads a program file named RUNSCRIPT. It then moves the character set, defines the macros, alters the vectors and boots RUN Script.

Before printing a document, you must change the page length from the default value of 66 to a value of 49. Enter the RUN Script dot command .pl49 at the beginning of each document to make this change.

To underline a word, sentence or phrase, use the macro character u. Place this macro before and after the text to be underlined. Other predefined macro characters are R (reverse on), r (reverse off), D (double width on), and d (double width off).

Command Limitations

To preserve the integrity of PrintRite 64, the only valid print commands are as follows:

CHR$(13)—carriage return

RUN It Right

C-64; 1525, MPS-801 or MPS-803 printer

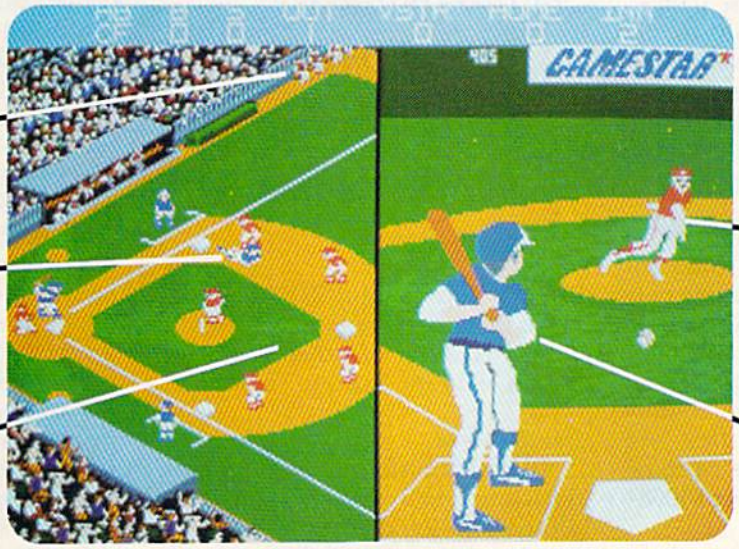
You Told Us What The Best Computer Baseball Game Would Have

"Great graphics"

"Relief pitchers —and subs"

"I like to slide —even head first."

"Let me see what's happening on the whole field."



"I want to play in the series!"

"I want to be able to throw a lot of different pitches."

"Put me right at the plate when I'm batting."

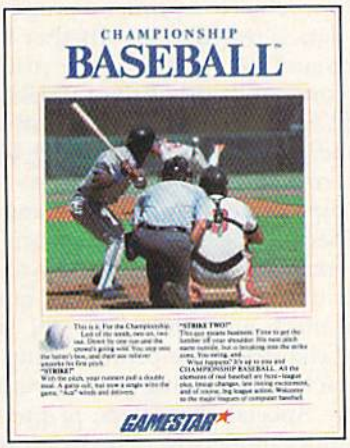
Here It Is.

CHAMPIONSHIP BASEBALL™

With 4 Divisions, 24 Teams, Playoffs and a Championship Series

You've been asking for the best in computer baseball games, and you want it *all*—graphics *and* features. We've heard you, and **Gamestar's** *Championship Baseball* delivers. No other product gives you the complete sport of baseball like *Championship Baseball:*

- Player Draft, complete with reserves.
- Setting your starting lineup.
- Batting Practice, Exhibition Game and League Play options.
- Each division is tougher than the last, so there's always a new challenge.



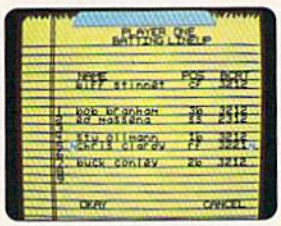
- You control all the action on the field—pitching (8 different pitches), hitting, catching, outfield relays, base running, even sliding under tags.
- Player substitutions can be made throughout the game.
- Division, playoff and championship series play.

All this and much more in the most complete baseball program available. When you're ready to step into the major leagues of computer baseball, Championship Baseball's your ticket. Nobody else gives you more.

For IBM PC, Tandy 1000, Apple IIe, IIc, Commodore 64/128, Amiga, Atari ST and 100% compatible computers.

To order, visit your local retailer or call 1-800-227-6900

Select your players from the talent pool, based on their characteristics and skill ratings. Name them after today's stars, or anyone you want.



Determine the batting order that will have the best chance against your opponent.

Batting window disappears when the ball's in play, so you can see continuous action.

Circle 5 on Reader Service card.

CHR$(14)—enter Double-Width mode
CHR$(15)—enter Standard Character mode
CHR$(17)—underline toggle
CHR$(18)—enter reverse field
CHR$(146)—turn off reverse field

Further restrictions apply to the use of double-width or reverse-field characters. In neither case can you include any special characters in the word or phrase to be printed, and any double-width text must appear on a separate line.

RUN Script 1.0 normally uses all the C-64's memory by switching out the Basic interpreter and leaving only the operating system, or Kernal, intact. RUN Script uses locations 6691 and 6692 as pointers to the top of available memory. The Boot routine places a smaller value in these two locations to allow PrintRite 64 to reside concurrently in RAM at 51968–53247.

Using the Program from Basic or Immediate Mode

To use the wedge in Immediate mode or from a Basic program, first load and run PrintRite 64. When prompted to load RUN Script 1.0, press N. Always open the printer with a device number of 4 and secondary address of 7; for example: OPEN 4,4,7. Any program that observes the above guidelines and doesn't occupy the same memory area should be compatible with PrintRite 64.

You can disable the wedge from Basic by pressing the run/stop and restore keys from Basic or after exiting RUN Script. You can restart it by entering SYS 52296.

The printer's default comma and semicolon are used to increase output speed. If you want to use these characters, remove the two REM statements in lines 10 and 11 of the Basic loader before running it. You can also make these two Pokes in Immediate mode. To disable either character, poke a 10 in the location shown.

Special characters are really composed of two characters . . . the top half and the part that descends below the line.

How It Works

All data transferred for output on the computer's serial bus is intercepted and handled by a wedge at locations $0326–$0327 (806–807). Location $9A (154) is checked to see whether a channel to a printer was opened with device number 4. If this value is not found, the data is sent to its intended destination—the screen or the disk drive.

If a channel to a printer was opened, the data is tested to see whether it's a command being sent to the printer. All commands other than CHR$(13) and CHR$(17) are validated and sent to the printer. The remaining bytes are considered to be characters and are then evaluated as either standard or special. Special characters are the lowercase letters g, j, p, q and y, along with the comma, semicolon, quotation mark and underline. All standard characters are printed using the character set residing in the printer's ROM. Special characters, printed in Graphics mode, are really composed of two characters, one the top half, and the other the part that descends below the line.

When PrintRite 64 is activated, the printer prints each line in two passes. On the first pass, the routine counts the leading spaces and determines the left margin. It then positions the printhead using the command to set a tab, CHR$(16). The program prints all normal characters and the top half of all special characters on this pass.

On the second pass, the program checks the buffer for special characters, underline toggles and carriage returns. PrintRite then determines the placement of these special characters. It locates the printhead, looks up the graphics data from a table and prints the character.

To speed up the printing process, the routine scans from the current print position to the end of the line. If no valid characters exist, or if the line consists of spaces, a carriage return is printed immediately. Without this technique, printing speed would be reduced to a crawl.

All carriage returns are printed in the Graphics mode at nine lines per inch. This technique allows no spacing between the top and bottom of each character. Therefore, each two-part special character appears as a unity. Since two carriage returns are required for each printed line of text, the line-feed spacing effectively becomes 4½ lines per inch. This is why the page length must be 49 instead of the normal 66.

PrintRite 64 can improve the quality of your documents, making them more readable and attractive. It's a welcome addition to any word processing application. ®

Bob Kodadek (3164 Surrey Lane, Aston, PA 19014) is a computer programmer who heads his own commercial software company, Family Software.

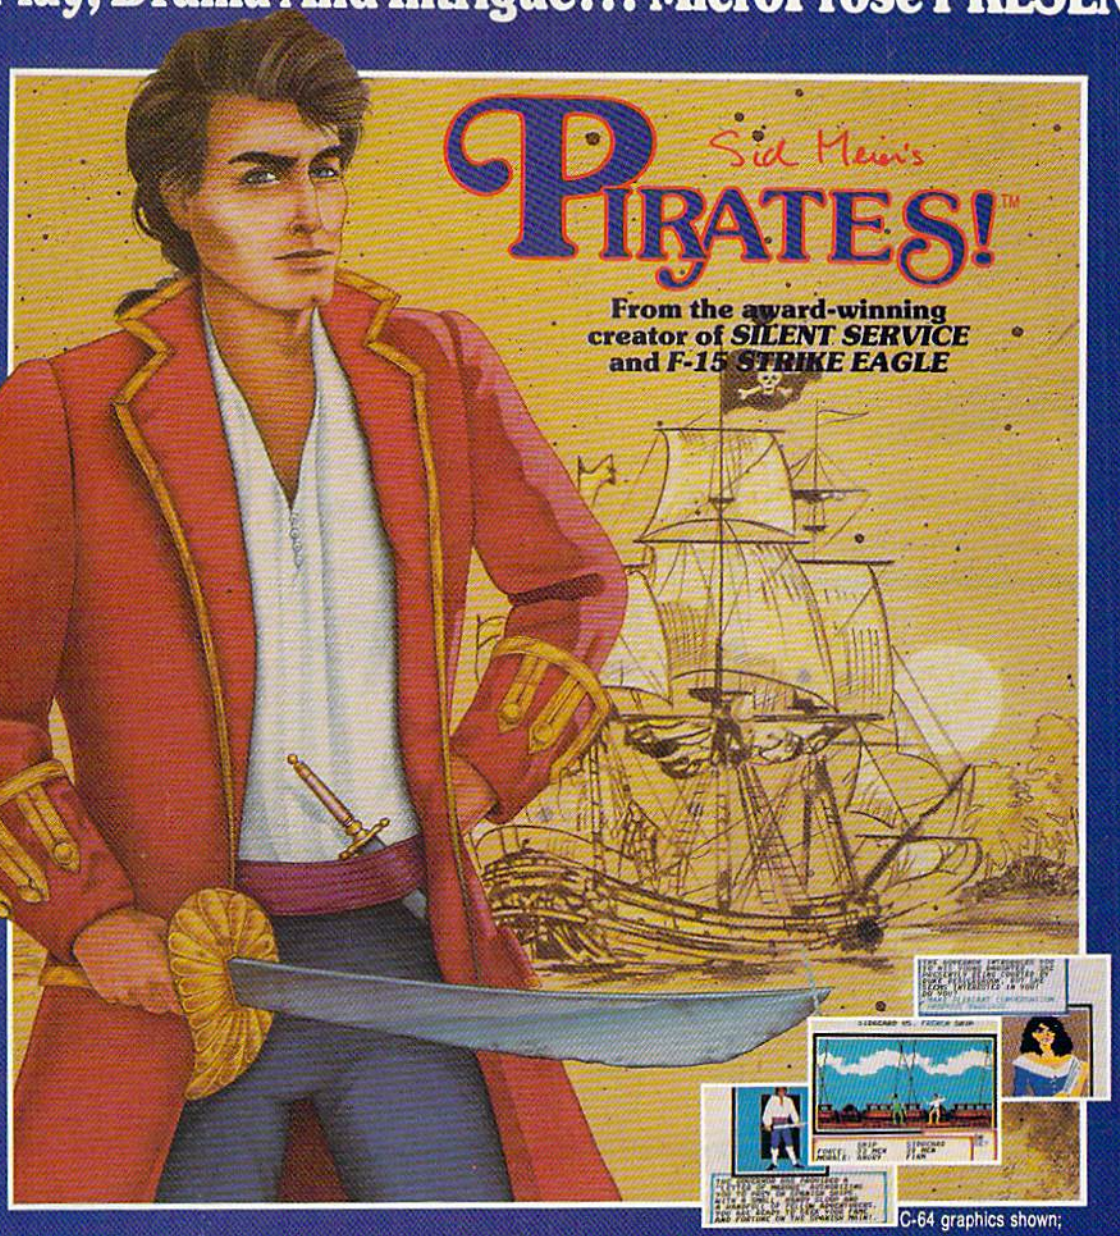
INTRODUCING The Adventure-Simulation... Action, Role Play, Drama And Intrigue... MicroProse PRESENTS



C-64 graphics shown; Actual screens may vary.

Join us, mate, for an expedition into one of the most fascinating eras of this millenium! **PIRATES!™** is an exciting new adventure-simulation that will challenge your skills while it captures your imagination!

You are cast in the leading role as privateer captain, criss-crossing the Spanish Main, slipping into ports as needs or opportunities require but always relishing your return to the freedom of the open seas!

PIRATES!™ is a unique blend of your favorite software gaming features all in one package. It weaves together the excitement of arcade-style action, the challenge of simulation decisionmaking, and the interactive storyline of a text-adventure. And, in the standard of all MicroProse software, **PIRATES!™** is designed to give you hundreds of hours of stimulating game play!

Pirates!™ features include:

- **ACTION...** ship battles, land conquests, fencing and sailing
- **STRATEGY...** plundering, trading, negotiating and forging alliances
- **GOALS...** treasures, romance, status, power and prestige
- **NEW EXPERIENCES...** explore across a map of the entire Caribbean
- **EXTENSIVE GRAPHICS...** over 70 different scenes and pictures
- **EXCITEMENT...** triumphs and tragedies, victories and defeats

PIRATES!™ is available from your favorite "Valued MicroProse Retailer" (VMR). Call us for the VMR nearest you!

MICRO PROSE
SIMULATION • SOFTWARE

120 Lakefront Drive • Hunt Valley, MD 21030 • (301) 771-1151

Versions planned for Commodore 64/128, IBM PC/PC Jr. and compatibles, Apple II+/c/e, and Atari XL/XE. Call MicroProse for specific machine availability. Suggested retail price only $39.95. Electronic Expressions Update

Design your own cards, letters and awards with the latest in text and graphics programs.

By JIM GRUBBS

In the December 1986 issue, *RUN* published my article, "Electronic Expressions," a review of several commercial software packages for combining text and graphics to create anything from greeting cards to newsletters. Since then, a number of new programs and enhancements to those already on the market have appeared. In this follow-up, I'll review some of these recent offerings.

All the programs in this review will work on either a C-64 or a C-128 in 64 mode.

Certificate Maker

Springboard Software has recently released a Commodore version of an already existing text-and-graphics package called Certificate Maker, which I mentioned in the December article. I've now tried it, and I like it.

Certificate Maker provides a library of over 200 certificates for various occasions, plus a generic form to use when none of the others are appropriate. Springboard has grouped them in seven categories: general, religious, children, family, sports, academic and unique. You have to see some of the samples in the "unique" category to appreciate them.

You'll also find a choice of five type fonts and 24 borders. Some of the certificates print horizontally, some vertically, and some are half-size horizontal. You have no choice about these parameters for any particular certificate.

Certificate Maker works a lot like Broderbund's The Print Shop and Unison World's PrintMaster. Also, users of Springboard's own Newsroom will note a similarity in the way Certificate Maker is presented on the screen.

I've given both Print Shop and Newsroom high marks for usability, and Certificate Maker rates just as high. While the manual is well-written, the clarity of the screen instructions make it almost unnecessary.

If you have a number of identical certificates to print, with only a change in the name of the recipient, Certificate Maker lets you create the list of names ahead of time, and then the program does the rest. This feature works particularly well with two disk drives. In fact, the program functions best in general with two drives, though it's satisfactory with one. You just have to do more disk swapping.

The sample certificate pictured in this article shows what you can expect

in the way of quality from Certificate Maker. The example was printed on an Okidata 120 printer. Certificate Maker supports virtually all the popular printers, even the old Commodore 1525.

I'm sure we can expect both Springboard and third-party manufacturers to come out with additional borders, fonts and certificates for Certificate Maker. Perhaps we can even look forward to a certificate editor, like the editors found in other graphics programs. Otherwise, Certificate Maker already offers all you could wish in a program of this sort.

Graphics Expander, Volume 1

I mentioned Springboard's Graphics Expander, along with Certificate Maker, in the December article, but it wasn't available for review at that time. Now that I've tried it, I'm disappointed. Unfortunately, even the best software houses put out disappointing packages from time to time.

Graphics Expander, Volume 1, is designed to be used with Broderbund's The Print Shop. It's a full-featured utility that comes with over 300 graphics and includes a graphics editor for creating your own Print Shop graphics. As far as it goes, the program works well, but there are problems.

First, both the packaging and the manual for the copy of the software I reviewed make repeated reference to the program's ability to incorporate and then modify graphics from other sources. However, my Commodore version didn't actually include these features. While that's a significant disadvantage, it's not the omission that concerns me as much as the fact that the packaging and manual don't indicate these features aren't available in the Commodore version.

There are also numerous mentions of Apple DOS in the manual. These are certainly out of place in documentation for the Commodore version.

The next deficiency isn't Springboard's alone. Several of the packages I've tried lately exhibit the same problem: The graphics that come with the package aren't compatible with the older Commodore 1525 and MPS-801 printers. Even the Okidata 120 and other non-Commodore printers with a 1525/MPS-801 Emulation mode can't print out Graphics Expander images.

Unfortunately, Springboard doesn't make this clear. While I don't expect every software house to support every possible printer, I do expect clear markings indicating exactly what does work with the package.

If you have the proper hardware and don't need to capture portions of high-resolution pictures, Graphics Expander will be a welcome addition to your program collection. However, it could have been a lot better, and the labeling problems definitely need to be addressed.

Holiday Edition Graphics Library

If it's additional fonts and graphics for The Print Shop you're looking for, the Holiday Edition Graphics Library from Broderbund is unequaled.

Now that The Print Shop Companion makes it possible for Print Shop users to choose from additional fonts, borders and graphics, Broderbund is including these items with their graphics releases from time to time. That's the case here, with ten new fonts and 14 borders especially designed for the holidays. Virtually every major holiday is included in the assortment of 70 graphics.

Because the Screen Magic feature of The Print Shop can be used with many high-resolution graphics packages, 12 full-panel scenes that are, in fact, hi-res graphics have been included in Holiday Edition. The sample printout in this article illustrates how these panels can be combined with some of the new fonts to create appealing pictures.

It's thumbs up for Holiday Edition, especially the new fonts, borders and full-panel images.

Davka Graphics

I think Davka Graphics deserves the award for recognizing a need and providing a top-quality package to meet that need. They've put together a package of over 60 Jewish symbols representing holidays, events and places to be used with The Print Shop. The graphics are well done, and the package includes versions for both Commodore and non-Commodore printers.

I'm especially impressed that they've programmed in a Hebrew text font. There's a conversion chart to go

Printout from Certificate Maker.

with it, showing what letters to type on the keyboard to produce the Hebrew letters in the printout.

Graphics Scrapbook

Epyx Software is contributing to the increasing family of Print Shop graphics with two Graphics Scrapbook packages. Chapter One of the Scrapbook is dedicated to sports scenes, while Chapter Two is labelled Off the Wall. These programs provide over 100 graphics each. Some of the choices in Off the Wall are sure to tickle your funny bone.

Epyx has chosen to support only non-Commodore printers, and it clearly says that on the packaging.

Micro.Ad

If you own The Print Shop and are involved in promotional activities, whether commercial or non-profit, you'll be interested in the Micro.Ad package containing Micro.Ad.Magic and Micro.Ad.Video. These programs, produced by a firm called MicroAds, let you take Print Shop images and add text to them to create and display electronic "slide" shows, generate titles for video tapes or produce other types of sequential text-and-graphics screen displays.

Any graphics you produce with the Screen Magic feature of The Print Shop can be used with Micro.Ad .Magic. Micro.Ad.Video also works well with Chameleon format bit-mapped, hi-res screen files.

Screen Magic files are saved in black-and-white, but with Micro.Ad .Magic it's possible to add color. While the result is not as good as a true color image, it's still effective. The program also lets you add standard Print Shop graphics to your screens.

The Micro.Ad package includes a short, but thorough, set of instructions, and the programs are easy to use. After you've selected the colors and design, you save the resulting file as a Micro.Ad video file for direct display, or you create a separate Screen Magic file. The second of these options lets you return to The Print Shop and overlay additional text and graphics for some really impressive displays. When you're ready to start your show, just load the display program.

Another program in the package, a small utility called Micro.Ad.Maint, lets you copy, rename and scratch files. Your slide show must use a predetermined set of filenames, and this utility makes it easy to get everything in order.

For my money, the Micro.Ad package is a winner. With it and a utility for converting files between various graphics programs (see below), you'll be able to create and display professional-looking screen sequences.

Graphics Converter

If you don't think there are enough graphics available for your favorite graphics program, or some of your favorite graphics were designed for use with another package, then take heart. Several conversion packages are appearing that make many of the pictures now available compatible with the program of your choice.

Cardinal Software is offering an excellent program in this category. It's called, appropriately enough, Graphics Converter, and it converts Print Shop graphics to PrintMaster format and vice versa. This program supports two disk drives, and it works with the non-Commodore version of Print Shop graphics. Once the graphics have been converted to PrintMaster format, that program can print them on a Commodore printer.

Photocopy

Megasoft has introduced a dandy conversion utility called Photocopy. It includes several features that owners of more than one graphics program will appreciate.

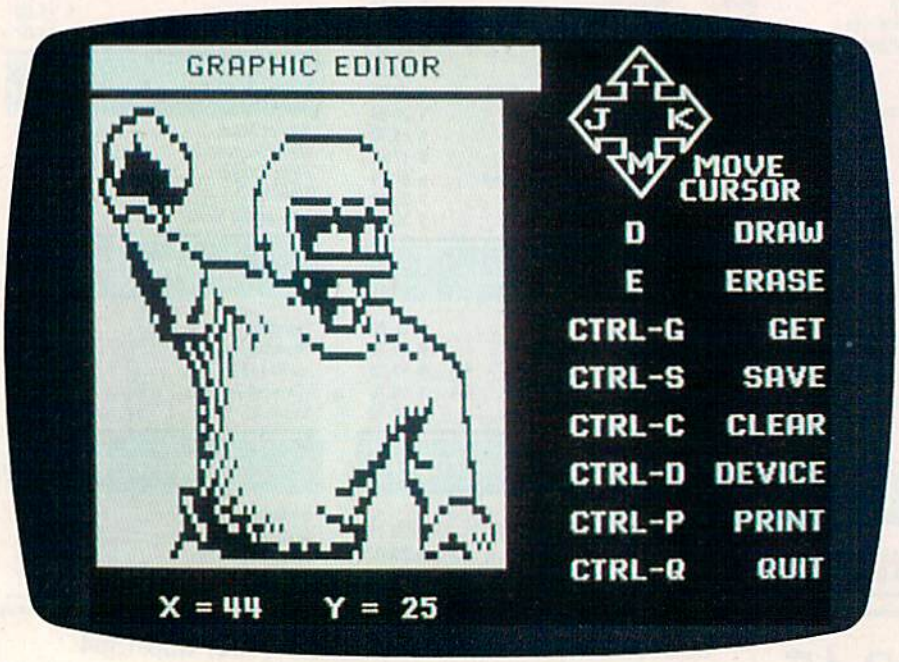
First, it can convert Print Shop graphics, in both Commodore and non-Commodore versions, for use as "photos" with Newsroom printouts. Photocopy will also produce Print Shop graphics from high-resolution pictures created with Doodle!, Flexidraw, Graphics Basic and others, although only a portion of the picture can be used because of the size limitations inherent in The Print Shop and Newsroom. An additional Photocopy option will let you capture Newsroom-type "banners" from high-resolution pictures.

A joystick is required for Photocopy operation. MSD disk drives aren't supported by the program, but it works fine with Commodore 1541 and 1571 units.

The only thing I found missing in Photocopy is a full-featured disk utility to be used from within the program. You can format disks from inside the program, but I find that I often forget the name of a file I want to convert, and being able to access a directory listing without exiting the program would be a big help.

As an example of what can be done with Photocopy, I used it to convert an Abe Lincoln graphic from Broderbund's Holiday Edition for use with Newsroom.

You'll probably be seeing advertisements for additional graphics conversion packages. If you're considering such a program, keep in mind that the more options it has, the more useful it's likely to be. Of course, the



Screen display from Graphics Scrapbook, from Epyx.

IT'S FINALLY HERE! INTRODUCING THE 1987

LIMITED EDITION

AmigaWorld

SPECIAL ISSUE

Hurry! Limited Edition!

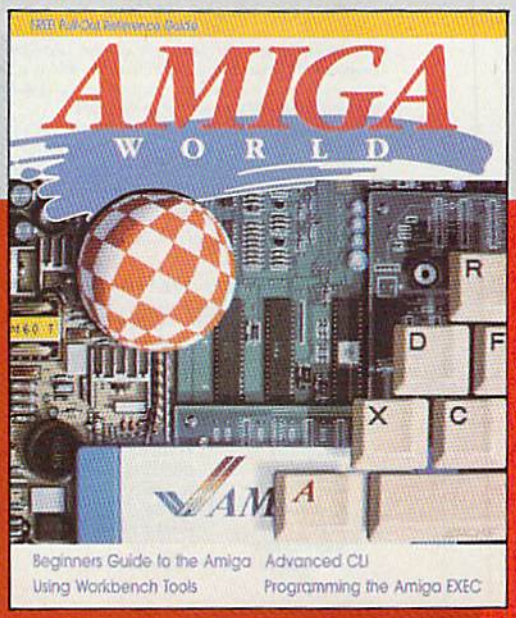
The technical and tutorial reference you've been asking for! Packed with graphics — programming hints and tips — system how-to's — and more of everything you've come to depend on in AMIGAWORLD. Only $3.95!

Whether you're a novice or an experienced Amiga user, the more you know about today's most advanced PC, the more creative you can be with it.

To realize the full promise of your Amiga, this clearly written Special Issue is a "must have." You'll use its helpful articles and tutorials to save time, be more productive, and do more with your machine. This is an issue to refer to again and again.

Hurry! The 1987 AmigaWorld Special Issue is sure to sell out in a matter of days, and will not be reprinted. Reserve copies now for yourself and your associates. Here's what's inside—

- **Amiga tips and techniques.** Time-saving tips that help you get the most out of your hardware and software.
- **Event programming in Amiga BASIC.** How to get your Amiga BASIC programs to respond to mouse clicks, key presses, error conditions, collisions, and other events.
- **Hardcopy Amiga images.** How to capture, print, photograph, and videotape Amiga images.
- **Advanced CLI.** How to get the most out of CLI.
- **Inside IFF.** How pictures, music, and text are stored in AmigaDOS files and how you can access them from C or BASIC.
- **Using the Icon editor.** A step-by-step tutorial on creating custom icons for your Workbench.
- **Programming the EXEC.** How to program the Amiga multitasking executive.
- **Beginner's guide.** The basics on how to backup disks, copy files, run programs, and more.



This Special Issue will be printed only once. Order early to avoid disappointment . . . and get additional copies for colleagues and associates. Look for the convenient reply envelope in this issue.

For fastest service, call 1-800-258-5473.
(In NH, dial 1-924-9471.)

LIMITED EDITION — DON'T DELAY — ONLY $3.95!

FREE!

Programming and Technical Reference Guide

FREE with each Special Issue! This 16-page pull-out quick reference guide eliminates searching through manuals. Use it to look up AmigaDOS syntax. Printer control codes. Memory maps. Hardware locations. Pin-outs for parallel, serial and RGB ports and expansion bus. Includes ASCII chart. Block diagram. BASIC commands. Glossary. All in one handy, bound booklet to put on your reference shelf—yours FREE with your AmigaWorld Special Issue!

YES! Please rush me _____ copies of the **AMIGAWORLD Special Issue,** with my FREE pull-out Programming and Technical Reference Guide. I am enclosing $3.95 for each copy that I order.

Amiga is a registered trademark of Commodore Business Machines, Inc.

A powerful word processing system for the Commodore 128
Includes: • On screen status/help display • 45 Fonts ready to use
• Font editor/creator included • Foreign Language Disk

From the author of *FONTMASTER II* comes ***FONTMASTER 128,*** an enhanced version for the Commodore 128. This powerful word processor, with its many different print styles (fonts), turns your dot matrix printer into a more powerful tool. Term papers, newsletters and foreign languages are just a few of its many applications. Here are some of its capabilities:

NOW WITH NO COPY PROTECTION — USES HARDWARE KEY

Word Processing Features

- Over 65 powerful commands make text editing a breeze
- 45 + Fonts (inlcudes Russian, Greek, Hebrew, Arabic)
- Room for 9 SUPERFONTS concurrently
- Text memory: approximately 64k Bytes
- Supports more than 100 printers
- 80 columns
- PRG file merge
- File names can be picked from disk directories
- 4 keyboard macros
- Headers/footers
- Page number in decimal or Roman
- On screen underlining/highlighting of text blocks
- On screen status display, including pictures of fonts
- New font preview displays printer output on screen
- On screen bi-lingual editing
- Form letter/data merging
- Multi-color help screens
- Right-to-left editing features for foreign languages
- Loads in approximately 15 seconds with 1571 drive
- New formatters for inserting graphics into documents

Word Processing Printing Features

- 50 + two-letter format controls (embedded in text files)
- Fractional character spacing used on word-wrap, justification, centering, and right alignment
- Proportional spacing (user-adjustable)
- Columnar printing (up to 4 columns)
- Overlaying of 2 or more characters (for phonetic markings, diacritics, etc.)
- 30 single-keystroke text modifiers (embedded in text files)
- Combine any or all of the following effects: underlining (adjustable) - more than 20 pitches - more than 50 line spacing sizes - condensed text - boldfacing - inversion (white letters on black) - superscripts (adjustable) - 3 text heights (micro-normal-tall)

Setup Module

- Two system setups can be made. In each, user can select his preference of colors (screen, text, cursor), printer interface (20 choices), and printer (over 100 choices)

Font & Character Set Creators

- Disk commands for maintenance of fonts or sets
- Grid for character creation/editing (manipulated with cursor keys, joystick, or light pen)
- Editing commands include: invert, flip, negate, shift, clear, copy
- Character can be printed while editing (font creator only)

$ WIN $
THE LOTTO
With Your Computer!

Forget random numbers. This program for home computers does an actual analysis of the past winning numbers. This amazing program will quickly provide you with all the data you need to predict which numbers will likely come up in subsequent drawings. All consistent lottery winners use some kind of system based on the past winners. Using the real power of your computer gives you a definite edge. It's menu driven and all you do is add the latest winners each week and the program does the rest in seconds. On screen or printer it shows hot and cold numbers, frequency, groups, sums-of-digits, odd/even, wheels numbers and more. No thick manual to read. It even has a built-in tutorial.

Ask your software dealer or call or write:

SPRITE-PRINT

Capture your C-64 graphics creations with this menu-driven, sprite-printing program.

By ROY DUNCAN

Movable object blocks, better known as sprites, are a nice complement to the C-64's graphics. Unfortunately, sprites can't be printed in a conventional manner. This program is for those of you who have always wanted to print sprites but were afraid to ask how.

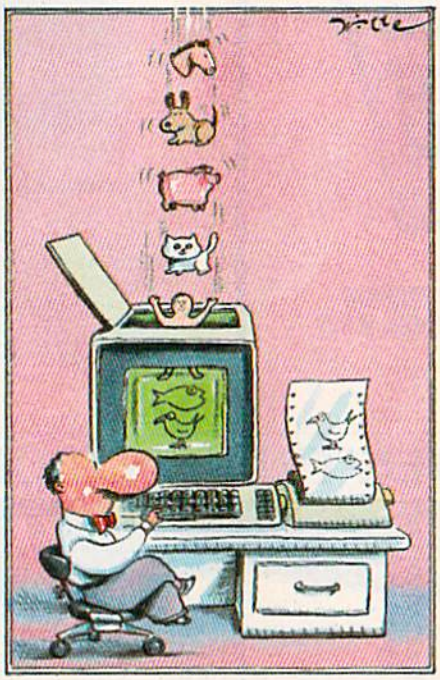
Sprite-Print is a menu-driven program that lets you copy sprites onto a high-resolution graphics screen beginning at address 8192. The program prints the contents of this hi-res screen and also allows you to copy and print text along with the sprites.

How To Use Sprite-Print

To demonstrate Sprite-Print, you must type in three program listings. Listing 1 is the main Sprite-Print program. It does all the work, with the exception of printing the screen. Listing 2 prints the screen by creating a short machine language file called PDUMP/1525. Whenever you select the Print option, this file is loaded from the disk. Listing 3 creates the sprite.

After you have typed in and saved the programs, run Listing 3. When the cursor reappears, load and run Listing 1 without clearing a screen. When the options screen appears, select option 6 to clear the hi-res screen, then press 1 to create a screen in a different area of memory. Next, select option 2 or 3 for uppercase or lowercase, respectively. Finally, select the normal Commodore character set.

After a few minutes, the sprite created by Listing 3 will begin to form on the screen. Once the cursor returns, choose option 4 from the main menu to print the sprite. When the program is finished, press any key to return to the options screen.



Program Operation

Here's how each option in Listing 1 works:

Option 1, Create Screen. When you select this option, the computer asks what you want to copy, then places that data on the hi-res screen. This option does not alter the contents of the screen. If you want to copy sprites, you may not want to erase the hi-res screen.

Option 1 also offers the ability to load an alternate character set from disk. The first two bytes of the character-set file contain the address from which that file was saved. Since these bytes are not part of the character set, they are removed in line 2590. If your character set appears to be altered, change line 2590 to:

```
2590 T = 50176
```

Option 2, Save Screen to Disk. This option saves a hi-res screen to disk. To see how this feature works, run Listing 3, then run Listing 1 without clearing the screen. Select option 6 to clear the hi-res screen, followed by option 1 to create a screen. Follow the prompts generated by option 1 to create your sprite on the hi-res screen. Once the sprite is created, press any key to return to the main menu. Finally, select option 2. Enter a filename at the prompt and press the return key.

The hi-res screen is saved to disk as a program file. If you choose this option accidentally, enter filename $ to return to the main menu.

Option 3, Load Screen from Disk. After you choose this option, follow the steps outlined for option 2 to create a screen file. Place the disk containing the screen in the drive and select option 3. Enter the screen's filename and press the return key to load the screen into memory. The program will remain at the main menu if it encounters a load error. Again, if you choose this option accidentally, enter filename $ to return to the main menu.

Option 4, Print Screen. This option prints the graphics screen in memory to a 1525, MPS-801, MPS-803 or other 1525-compatible printer. When you call this routine, the machine language file created by Listing 2, called PDUMP/1525, is loaded from disk. If a disk error occurs during loading, the program will return you to the main menu. You can change the

Circle 201 on Reader Service card.

PDUMP/1525 filename as long as the change is reflected in the value F$ in line 2260.

Option 5, Display Screen. This displays the hi-res screen in memory. Pressing any key returns you to the main menu.

Option 6, Clear Screen. This option clears hi-res color memory and the hi-res screen.

Option 7, Exit Program.

When the program is waiting for you to press a key, the cursor will flash in the upper-left corner of the screen. This tells you that the program has finished drawing the hi-res screen.

Subroutines

Sprite-Print also contains three short machine-code subroutines. The first, accessed with SYS 828, copies 128 characters from ROM to RAM. The second is activated by SYS 869 and clears hi-res memory by poking zeros into locations 8192 to 16191. The third subroutine is activated with a SYS 923 and fills hi-res color memory, beginning at 1024, with predetermined values. The default color value is 12, which creates black plotting on a medium gray background. To change the color combination, change the POKE 251,12 in lines 80 and 2340 to POKE 251,x, where x = [plot color]* 16 + [screen color].

The Print Subroutine

I designed the printing subroutine as a separate program so you can use it in your own programs. Just load the subroutine with the command

```
LOAD "filename",8,1
```

Then poke 49152 with the value of the hi-res screen's starting address divided by 256. Sprite-Print prints the hi-res screen beginning at 8192, requiring you to enter

```
POKE 49152,8192/256
```

before printing. The Print subroutine can be executed as follows:

```
OPEN4,4:PRINT#4:SYS 32959: PRINT#4:
  CLOSE 4
```

The routine uses locations 251 to 254, as well as 49152 to 49173.

Whether you use Sprite-Print in its entirety or use just a few of its subroutines, I think you will find it useful for many applications. Ⓡ

Address all author correspondence to Roy Duncan, 90 Savoy Drive, Florida Gardens, Surfers Paradise, Queensland 4217, Australia.

KRACKER JAX® REVEALED!

THE BOOK

At last—**Kracker Jax** takes you beyond the protection barrier! The secrets of un-protecting software are yours with **Kracker Jax** revealed!

We'll show you exactly how to defeat five different protection schemes encompassing scores of current programs. Our tutorial has twenty specific examples to lead you, step by step, to a new level of knowledge. Here's what you get:

- **Kracker Jax revealed.**
- **A reset switch.**
- **A utility disk.**
- **20 parameters on disk.**

ONLY $23.50 COMPLETE!

Orders outside of North America
Please add $7.50 for shipping and handling.
Please allow two weeks for delivery.

Flash— ***KRACKER JAX voted "MOST INNOVATIVE COPY PROGRAM OF 1986" by The Guide Magazine!***

AND HERE'S WHAT SOME OF OUR CUSTOMERS HAVE TO SAY ABOUT US:

"I really enjoy doing business with you—your attitude is great!" Richard Libby.

"Very impressed with your product—thanks." Larry Lyman, Director, Green Mountain Commodore User's Group.

"I am excited about **Kracker Jax Revealed**—thanks again for the great product & great service." Jerry Pectol.

"Very nice utility—about time someone looked out for us." John Dale, President, Wiregrass Micro-Comp Society.

See our reviews in the Jan. '87 Ahoy! and in the Dec. '86 issue of The Guide.

KRACKER JAX® PROTECTION BUSTERS
BLAST DISK PROTECTION

ARE YOU CAUGHT UP IN THE COPY PROTECTION ARMS RACE?

DEFEND YOURSELF WITH KRACKER JAX® A REVOLUTION IN ARCHIVAL SOFTWARE!

Kracker Jax is the powerful parameter copy system that is taking the country by storm! What IS a parameter! It's a custom program that allows your 1541 or 1571 disk drive to strip all copy protection from your expensive software, leaving you with UNPROTECTED, TOTALLY BROKEN back-ups that can even be copied with a simple fast copier. Each Volume costs $19.95 and will un-protect around 100 titles. So why pay for backups of programs that you already own?

Check out some of these exclusive features:

- **Kracker Jax** is the BEST program of its kind!
- **Kracker Jax** will back up titles that the nibblers CAN'T!
- **Kracker Jax** requires NO special knowledge to operate!
- **Kracker Jax** strips protection in a matter of SECONDS!
- **Kracker Jax** is priced RIGHT—just $19.95 per Volume
- **Kracker Jax** is UNPROTECTED—easy to back up!
- **Kracker Jax** updates are available QUARTERLY!

VOLUME FIVE INCLUDES A POWERFUL NEW C64/C128 FAST COPIER!

ALL NEW VOLUME FIVE
VOL. 1-4 STILL AVAILABLE. ONLY $19.95 EACH!

KRACKER JAX® PROTECTION BUSTERS
BLAST DISK PROTECTION

THE SHOTGUN

Those of you who have used our **Kracker Jax** parameters know just how good they are. Can you imagine the kind of nibbler we could put out? Well, you don't have to imagine it because it's HERE! **THE SHOTGUN**, our new premium nibbler utility, is available two ways:

- **THE SHOTGUN** by itself—offered to you at the unheard of introductory price of only $14.95!
- **THE LOADED SHOTGUN**—Packaged WITH 32 of the most popular **Kracker Jax** parameters ever created—only $19.95!

Whichever version you order, you'll find **THE SHOTGUN** to be loyal to the **Kracker Jax** tradition of more quality for less money.

THE MSD DUAL CANNON

MSD owners aren't left out in the cold anymore! The all new **MSD DUAL CANNON** gives you state of the art control over your advanced equipment! You get:

- **A NIBBLER**—for backing up your protected programs!
- **A FILE COPIER**—for easy file maintenance and manipulation!
- **A SECTOR EDITOR**—developed just for the MSD dual drive!
- **And a FAST COPIER**—that WON'T transfer errors—perfect for use with data disk or **Kracker Jax** parameters!

Start getting the full performance that your MSD drives are capable of delivering. You already *know* you own the finest drives available—so why settle for anything less than the best utilities made for them?

Get the most out of your special equipment—only $34.95!

ON-LINE HELP

Are you programming in BASIC? Let your C-64 help you! Forget about all those tattered books and charts—just load **ON-LINE HELP** in at the beginning of a session. Then, at the touch of the F1 key, you're given a menu of available help screens to choose from! When you return to BASIC, you're right back EXACTLY where you left off!

ON-LINE HELP gives you 17 screens of info at the touch of a button, including: *ASCII character set/POKES/color codes/selected DOS commands/useful memory commands/BASIC keywords, abbreviations, and token values/sound registers/musical notes in all 8 octaves/location 197 last key pressed.*

Never waste time hunting for basic information again—only $19.95

SUPER CAT

If you had the time and skill to create your own custom disk catalog system, the paramount system of your wildest dreams, it probably STILL wouldn't have all the features of **SUPER CAT!** For example: • Catalog up to 640 disk directories—1280 with 2 drives! • Index & alphabetize over 5000 titles—10000 with 2 drives! • Unique ID's are NOT necessary!/A printer is NOT required! • Find ANY title in 10 seconds—sort 1000 titles in 8 seconds! • Automatic entry with Selection, Edit, and Cross Ref. options! **SUPER CAT** has literally too many features to fit in here. From the easy, menu driven work screens to the comprehensive output options, **SUPER CAT** is the most powerful and complete disk catalog system available today!

The ultimate software library index system—only $24.99

THE C-128 CANNON

Here's the package you C-128 owners have been waiting for! The **C-128 CANNON** gives you more power than you ever hoped for! Just look at some of these capabilities:

- **NIBBLER**—Works with single or dual 1571/1541 drives!
- **FAST COPIER**—Great for data disks or use with Kracker Jax!
- **FILE COPIER**—Makes file maintenance and manipulation easy!
- **1581 FAST COPIER**—For use with the new high speed 3.5" drive!
- **1581 FILE COPIER**—For high speed file manipulation!
- **MFM COPIER**—Copies unprotected IBM and CP/M disks!
- **T/S EDITOR**—Works with 1541, 1571, and the new 1581 drives!
- **ERROR SCANNER**—Complete with on-screen display!
- **DENSITY SCANNER**—Check for altered densities track by track!
- **DIRECTORY EDITOR**—Alter & organize your disk directories!
- **KRACKER JAX**—You also get 100 of our most popular parameters!

You've seen nibblers alone that sold for thirty-five or forty dollars. And the 100 **Kracker Jax** parameters are a twenty dollar value. Yet the ENTIRE **C-128 CANNON** utility package sells for just $34.95. Never before has this much power and control been integrated into a single, affordable product. If you own a C-128, you deserve the **C-128 CANNON!**

C-128 owners, this is the package of your dreams—only $34.95

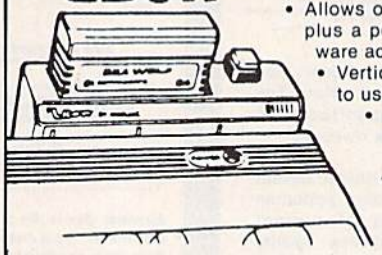
Our Customers Agree



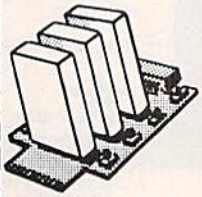
'LBow™ CARTRIDGE PORT EXPANSION $19.95

For C-64 and C-128

- Allows one cartridge on the top, plus a port in the back for hardware access.
- Vertical cartridge port is easy to use.
- Built-in reset button, end turning the computer off and on.
- Rests on the work surface, ends stress on the port of plugging unplugging cartridges.

PROTECTION REVEALED $15.95

Now in its sixth printing!!! A beginners guide to software protection. Written to give you a fundamental understanding of a disk and BASIC protection. Identify what you are seeing when examining a disk. Become a master of illusion. Reveals countless tricks and tips that mystify the user. The book is 141 pages and includes a free disk of 21 utility programs.



APROSPAND-64 $29.95

Give your C64 or 128 full expandability. This skillfully designed expansion unit plugs into the cartridge port, this gives you 4 switchable (single or in combination) cartridge slots, includes fuse protection and a reset button!

A word about AB switches . . .

Our AB switches allow you to share equipment rather than buy costly duplicates. Many configurations may be arranged, two computers to one disk drive and printer, or two printers to one computer. No need to ever plug and unplug cables again, just turn a knob to switch from one peripheral to another. Below are the types we have in stock, remember if you need extra cables, we carry a large selection.

$ SAVER SWTICH AB $29.95
VIC-20, C16, Plus 4, C-64, or C-128 compatible. Three female 6 pin sockets.

SUPER SAVER ABCD $79.95

HANDY WINDOW

This desktop accessory gives you an alarm clock, a memo pad and six other useful features to make your computing easier.

By IAN ADAM

Handy Window is a collection of eight computer routines, all rolled into one package. It's so easy and convenient to use that you'll wonder how you ever computed without it.

After you've loaded the program into your C-64 or C-128 (40-column screen only), you can proceed with programming, or you can run a Basic program. You only have to remember that Handy Window uses just two keys: shift and control. Pressing them at the same time displays the Handy Window menu; the same combination removes the menu from the screen and returns you to the program you were in before.

Both the C-64 and C-128 versions give you full control of a memo pad, an accurate digital clock and an alarm, as well as access to the printer.

Getting Started

The first step in using this program is the hardest. You have to type in the appropriate version of Handy-Maker (Listing 1 or 2). When you're finished, be sure to save it to disk. Handy-Maker creates a disk file with the Handy Window program in it.

When you run the program, it prompts you to insert a disk for the code. Insert any formatted disk, then press any key to create a file called .HANDY64 or .HANDY128 on the disk. This process takes about 30 seconds. You can place a copy of Handy Window on any of your other disks by running the program once for each disk.

The resulting file isn't a Basic program that you can load and run; it's a machine language file that must be executed. On the C-64, you execute the file with the following two-line program:

```
10 IF PEEK(49152)<>120 THEN
   LOAD".HANDY64",8,1
20 SYS 49152:NEW
```

On the C-128 in 128 mode, a different two-line program is required:

```
10 BLOAD".HANDY128"
20 SYS 4864
```

How To Use It

The Handy Window menu gives you eight choices, from which you make selections by pressing the corresponding keys. These are the eight options:

Memo Pad (A): Choosing A produces a blank screen on which you can type memos to yourself. All screen editing functions are active, including scrolling and screen clear, so be careful not to erase your message. Press the shifted control key to return to the mode you were in when you pressed A. If you choose A again, your notes will still be there, waiting for you.

Show Clock (B): The digital clock is always displayed when the menu is on-screen. If you choose this option, however, the clock will also be displayed when you leave the menu to enter the Memo mode or return to your original program. A bull's-eye appears beside the letter B to acknowledge your selection.

Hide Clock (C): When you select this option, the only immediate result is that the bull's-eye moves down beside the letter C. When you leave the menu later, the clock will no longer be displayed. It will continue to keep time, however, so you can retrieve it later with menu choice B.

Set Clock (D): When you first access the menu, the clock at the top probably won't be running. If you press D, the cursor will appear at the time display. Simply type in the present time directly over the display, making sure to set AM or PM, then press the return key. The clock will be set to whatever is showing in the time display area and will start running immediately.

To get a stopwatch/timer, select D, then press shift-CLR to clear the screen. When you press the return key, the stopwatch, set to all zeros, begins running. Press D again to stop it.

Set Alarm (E): The alarm time is shown at the bottom of the menu. When you press E, the cursor appears there, and you enter the alarm time just as you did when setting the clock, again remembering to set AM or PM. When you press the return key, the alarm is enabled, and the display changes to AL ON to remind you.

When the preset time arrives, a buzzer or bell will sound, the screen will flash orange and black, and ALARM will be printed on the screen. You acknowledge it by pressing the shift and control keys simultaneously, which, of course, brings up the menu. If the alarm sounds while the menu is displayed, you can cancel it by pressing F.

No Alarm (F): This option disables the

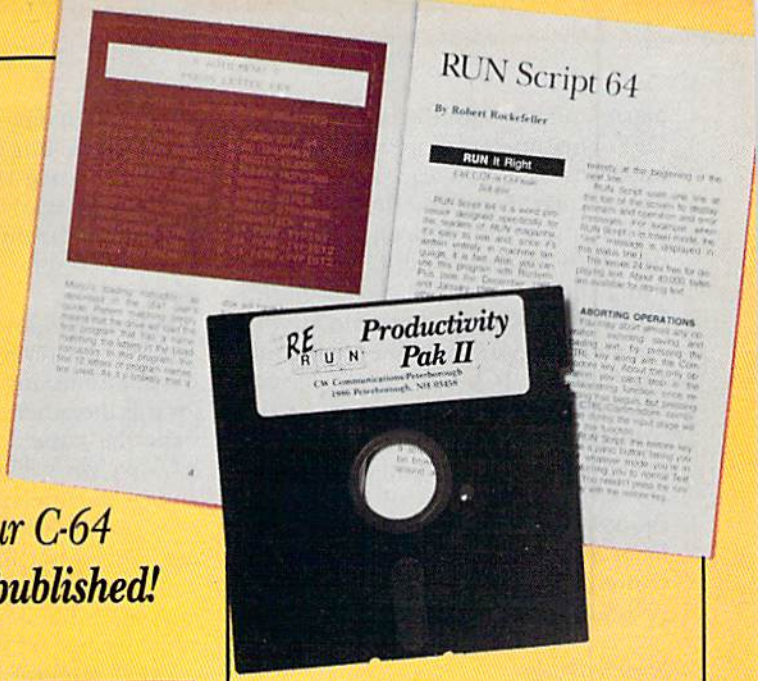
SPECIAL EDITION!

Discover how much more you can do with PRODUCTIVITY PAK II!



*Packed with productive applications for your C-64 and C-128, **including many never-before-published!***

No matter how you and your family use your C-64 or C-128, you'll make short work of your most challenging computer projects with ***PRODUCTIVITY PAK II***—the blockbuster sequel to last year's best-selling Productivity Pak!

Here, on a ready-to-run disk, you get *more than a dozen top-rated programs* for Word Processing... Telecommunications... Database Management... Spreadsheet Calculating *(featuring the popular Datafile Series)*... PLUS Education, Graphics and Utilities.

---

*To get your **PRODUCTIVITY PAK II** disk with a fully illustrated documentation booklet and loading instructions, complete the order form below or ☎ CALL TOLL FREE **1-800-258-5473** (In NH, dial 1-924-9471).*

YES! I want to increase my productivity with *ReRUN*'s new ***PRODUCTIVITY PAK II***. Please send disk and booklet at $21.47. (Includes postage).

FOR THE C-64...

THE DATAFILE SERIES Here's the newest version (3.6) of the most popular database management program ever published in *RUN*, now fully updated exclusively for this special *ReRun* by the author, Mike Konshak! Includes ***DATAFILE***, ***DFPRINT***, and ***DFCALC!***

"One fantastic piece of work!"
—Fred Burkhart

"Simpler to use and more flexible than most of the 'commercial' programs!"
—P. Kirkpatrick

RUN SCRIPT 64 Here's power and flexiblility in a word processor, written by *RUN*'s noted programmer, Robert Rockefeller. Now totally updated with more than 100 features and options!

RUNTERM PLUS (With Autodialing)—The hit telecommunications program lets you tap into infinite sources of information including CompuServe, Delphi and The Source. And now it can be used with autodialing and a wider choice of modems including the 1650, and the 1670—plus other 1650 compatibles.

DISK BACKUP A handy disk utility that permits you to make copies of your *Productivity Pak II* disk.

CONSTRUCTION SET A graphics utility that helps you create 6 consecutive scrolling background screens. Great for creating adventure games!

LOGO FOR KIDS A super LOGO language using Turtle Graphics designed especially for children.

MENU 64 This disk utility displays all programs on your disk and lets you run them with ease.

...AND FOR YOUR C-128

RUN SCRIPT 128 The 128 version of the popular RUN SCRIPT word processor by Robert Rockefeller. Features a full 80 columns, larger text files, plus graphics capabilities.

GRADEBOOK 128 A valuable classroom management tool for teachers.

REMINDER 128 The all-purpose "desktop accessory" that puts your memos and appointments at your fingertips.

MENU 128 This menu program lets you automatically run your 128-mode programs.

☎ TOLL FREE 800-258-5473

ReRUN • Elm Street • Peterborough, NH 03458

alarm and changes the display to AL OFF. The time set remains displayed, however, and you can reactivate it later by pressing E and the return key (to enter the time shown). This would be handy if, for example, you were using the computer alarm to get up for work or school and wanted to disable it temporarily on the weekend.

Print Screen (G): Pressing G sends whatever was on the screen to the printer. This is a simple routine, so don't expect anything fancy. It's great for a quick snapshot of the screen, though.

Print Memo (H): Option H sends the contents of your memo pad to the printer.

How It Works

Because the program is in machine language, you can achieve some effects—such as instant transfer of information screens—that are almost impossible to achieve in Basic. The program for the C-64 is placed in high RAM at 49152, and storage for extra screens of information is in hidden RAM behind the Basic ROM. The C-128 version is located in the applications program area at RAM location 4864, and extra screens are stored at the top of Bank 0, slightly reducing the space available for Basic programs.

The program also uses the Interrupt routine of the C-64 or C-128. Sixty times every second, the computer stops what it's doing, sets aside its work and does some "housekeeping"—reading the keyboard, updating the TI$ clock, and so on. By modifying the vector for this Interrupt routine so that it points to your program, you can add the extra functions to the list of housekeeping chores. This allows you to carry out other activities, such as writing or running another program, while Handy Window checks in to see whether it's needed. In effect, the computer is running two programs simultaneously.

The digital clock doesn't use TI$ to get the time because TI$ is inaccurate, particularly on the C-64. It tends to run too fast and stops entirely when the computer accesses a peripheral. Instead, the clock is based on the time-of-day feature of one of the two 6526 CIA interface chips. These chips are used for timing a variety of internal activities, as well as communicating with the disk drive and modem. The time-of-day feature is not normally used, but it's extremely accurate. Because there are two CIA chips, you could theoretically have two clocks for different time zones.

Final Tips

Handy Window shares computer assets with whatever other programs you might be running. It will do just fine as long as the other programs don't overwrite the same areas in memory. But it won't work if the other programs change the interrupt vector, and it's incompatible with any program that uses the same RAM for storage. If you're uncertain whether a program is compatible with Handy Window, you'll have to try it and find out.

Don't attempt to use Handy Window when any input/output processes (such as printing, disk access or modem communication) are active. Because Handy Window interrupts normal operation, it will shut down these activities automatically.

If the Handy Window menu should fail to appear when you press shift-CTRL, the interrupt vector probably has been changed. This can happen easily—for example, if you press the stop-restore combination by mistake. To restore Handy Window, just type

```
SYS 49152 <return>
```

for the C-64, or

```
SYS 4864 <return>
```

for the C-128.

Finally, Handy Window doesn't work on the C-128's 80-column screen. If you invoke it in this mode, you'll get the menu, but none of the functions will work properly. Ⓡ

MAC INKER™

MAC INKER™, Automatic Ribbon Re-inker. Re-ink any fabric cartridge or spool for **less than 5 cents**. Over 70,000 in the field and we support **ALL** printers. Universal Cartridge or Universal Spool MAC INKER

$68.50. We have cartridges re-inkable in 10 colors. Ask for your printer type or for complete listing. Bottle ink $3.00/each. Shipping $3.00.

PROTEUS™, the 'Siamese' Buffer. It is a **Data Switch** with buffer on both ports. Switch manually or via software. Saves time, space and money. Or ask about our **MAC MASTER** line of Universal Buffers and Printer Controllers (serial or parallel up to 1 MEG).

PROTEUS 64 K-199.00
256 K-299.00 Shipping $4.00.
Of course we have **Data Switches**, serial/parallel, 2 way, 4 way, crossed etc., at most competitive prices (all lines switched).

CABLES priced $10-30. We carry cables for all common computers and peripherals. Rapid turn-around on custom orders.

MERCURY MODEM. Really 100% Hayes* Compatible. 300/1200 baud, speaker, full status light display and 2 year warranty. **$149.00**

Quick Link Communications Software—fast, quick, easy to learn. **$29.95** (available for IBM PC or Macintosh)

*Hayes is a trademark of Hayes Microproducts.

MAC THE RIPPER. Our newest, original and welcome printer companion. Pulls off paper perforations and tears the sheets apart. Takes little space and will pay for itself almost immediately in saved time and tedium. Ask for brochure. Introductory Price **$299.00.** Shipping $10.00.

Order Toll Free.
Call or write for free brochure.

DISK STUFFER

Save up to 288 graphics files on one side of a 1541 disk.

By STEVE CANNY

Long Directory is a group of three programs that utilize normally wasted disk space when you're storing lots of little graphics files, such as those created by The Print Shop and PrintMaster. It will let you save up to 288 of these files on one side of a 1541 disk, provided they don't exceed a total of 664 blocks.

To create a "long directory," first type in Listings 1, 2 and 3 and save them to disk before running them. Then load and run Listing 1, remove the program disk, insert a blank data disk and follow the screen instructions. Listing 1 allocates track 19 on the data disk, so the DOS won't save any files there.

When Listing 1 is finished, test it by entering the New command, followed by this one-liner:

```
10 FORT=1TO144:SAVE"TEST"+STR$(T),
   8:NEXT
```

This will save 144 test files to the data disk in about ten minutes. Then load and run Listing 2 from the program disk, reinsert the data disk and follow the screen instructions again. Listing 2 transfers the contents of track 18 to track 19 and reformats track 18 to accept an additional 144 files. When Listing 2 is done, enter the New command and use the one-liner to add another 144 test files to the data disk. Just change the TEST in the one-liner to TESTS this time around.

Now load and run Listing 3 from the program disk, reinsert the data disk and follow the screen prompts. Listing 3 finds the last sector on track 18 on the data disk and changes the sector link to point to sector 1 on track 19, which contains the second directory added to the disk. Listing 3 then links the first 144 files with the second 144 files and validates the disk to prevent overwriting. After you've modified the data disk with Listing 3, place a write-protect tab on it to prevent alterations.

You can't validate disks modified by Long Directory, nor can you scratch files from them or add files to them. Also, if you have a 1571 drive, you can read the directory in 1541 mode only.

When you load the data disk's directory and list it, you'll find that the test file appears 288 times. To use Long Directory with your own files, just substitute them for the one-liner after running Listings 1 and 2. Ⓡ

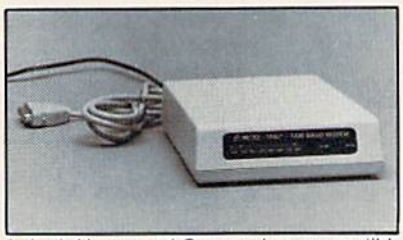
The Great Communicator

Direct-connect Hayes/Commodore® 1670 compatible 1200 Baud modem for ONLY $119.95.

Now that you're able to do all those stand alone applications with your Commodore, like word processing, spread sheet analysis, and many others, you are probably thinking "It would sure be nice if I could expand the amount of data I have access to." You are quite right, everything from Electronic Mail (E-mail) to stock quotes and huge databases of every imaginable type is now on line to the small computer owner. You can even send and receive telexes anywhere in the world. All you need is a telephone and a modem which allows your computer to communicate with others through these many services.

The next question is: "Which modem is best for me?" Let me first say that almost all modems (and services) are set up to communicate in one of two speeds; 300 and 1200 Baud. If you look around you will find that there is a flood of 300 baud modems on the market and sometimes at very low prices. The reason is simple, they are being dumped because most computer users prefer 1200 Baud. (1200 Baud is about 4 times as fast which means you spend less time and money getting the data you want and more time enjoying it.) Virtually everyone who has a 300 would rather have a 1200. You will also notice a few very cheap 1200s on the market at "too good to be true prices". They are. The reason is that they are either not truly Hayes and/or Commodore compatible therefore not usable in all situations and with all services.



The Aprotek-1200C is both Hayes and Commodore compatible and 1200 baud. Why not get a modem that will satisfy your present AND future needs by going directly to an inexpensive Aprotek-1200C especially when we have it on sale?

What do you get for $119.95? Everything! You don't need to worry about cables, compatibility or anything else! We don't just sell hardware, we sell solutions. The Aprotek-1200C plugs directly into your Commodore Vic-20, C-64, C-64C or C-128 user port. It is unique in that it has two separate (switchable) emulation modes (Hayes and Commodore 1670) to make it compatible with all available software. The Aprotek-1200C is a full feature, 300 and 1200 Baud modem with Auto Answer, Auto Dial. Touch-Tone or rotary dialing, has the full complement of 8 status LEDs on the front panel and has a built in speaker with volume control. Just plug it into your computer and standard phone jack with the supplied cables. Also included is a free trial offer subscription to Quantum-Link, a very useful Commodore user database with local access numbers and about every feature imaginable.

Do you have more than one computer or do you plan to get another computer? You can have your cake and eat it too. Simply order our Universal RS-232 interface #5232 along with the standard Aprotek-1200 which you can use with any computer that has a RS-232 serial port as well as your Commodore.

NO RISK POLICY
Try the Aprotek-1200 for two weeks and if you are not satisfied, send it back for a prompt refund.

The bottom line:

Aprotek-1200C (for Commodore)
order #1200C.....$119.95

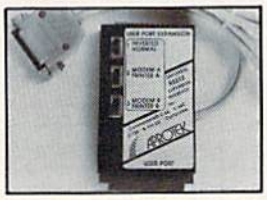
Aprotek-1200 (for RS-232 with DB-25)
order #1200.....$119.95

Modem shipping – Cont. US $5.00, UPS Blue $10.00

UNIVERSAL RS-232 INTERFACE

with Commodore User Port expansion.ONLY $39.95 + shipping

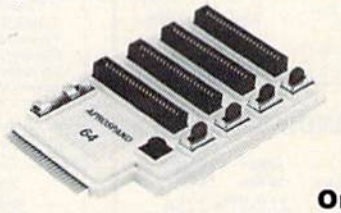
Now you can connect and communicate with any of the popular RS-232 peripherals using your Commodore User Port. You can even connect more than one and leave it permanently attached. This superb expander opens a whole new world to your Commodore computer's capabilities. You can now connect to printers, modems and any other RS-232 devices. If you already have a device that connects to the User Port, don't worry because the port is duplicated on the outside edge of the interface. Simply plug it in and turn on the device you want to communicate with. Comes complete with sample driver program listings. Compatible with all Commodore home computers with a user port. 1-year warranty. **Order #5232.**



Aprospand-64™

Gives your Commodore 64 or 128 full expandability!This superbly designed expansion module plugs into the expansion port & gives you 4 switchable (singly or in any combination) expansion connectors —plus fuse protection—plus a reset button! Before you buy an expander, be sure that it has a fuse to protect your computer and that you can activate your cartridges in **any** combination allowed by the cartridges.

The Original



Fully C-128 Compatible

Order # 5064

NOW ONLY $29.95 + shipping

NEW! ***"EXTENDER-64"*** allows you to place your Aprospand-64 (or any other cartridge expander) in a more convenient location. This device is a 10" section of ribbon cable with male and female connectors that allows you to place your cartridges to the side of, rather than in back of, your computer. This puts your cartridges and switches within easy reach.

ONLY $19.95 + shipping. **Order #5065**

By MARGARET MORABITO

Our readers write in with information, questions and comments.

This month I'm passing along a couple of updates to past articles, an offer to share software and answers to some reader's questions.

Parent Volunteer Computer Lab

Last July I wrote about volunteers Bonnie Nebel and Susan Copp from New Berlin, Wisconsin, who started a computer lab in their local school. The lab is partly staffed by parent volunteers who set up the computers before classes arrive, load the software so teachers don't have to do it and help students with questions during the lab periods.

Nebel and Copp have received many requests for additional information on starting such a program. In answer to these requests, they've made up guidelines in an easy-to-use outline form that they've donated to *RUN* for publication. You'll find it in Table 1.

As part of the parent-volunteer program, Nebel and Copp have developed a training course for teachers and volunteers. Called Hands-On Computer Training, this course is tailored to the needs of both the teachers and volunteers and the students they'll be working with. There are two versions, one for class situations and one for self-teaching.

For more information on this tutorial software, or on the parent-volunteer program itself, you should write to Hands-On Computer Training, 19975 W. Julius Heil Drive, New Berlin, WI 53151.

Education Dealer

In the June 1986 Resource Center, *RUN* published a list of authorized Commodore education dealers. I've recently received an addition to the list—a store that was newly designated about that time. It is The Working Computer, 1320 Stony Brook Road, Coventry Commons, Suite #9, Stony Brook, NY 11790.

Physical Fitness Software

If you're involved in teaching physical fitness, nutrition or exercise physiology, you'll be interested in some C-64 programs that reader Barry Brown has created. The list includes Personalized Exercise Prescription, Nutritional Analysis, Assessment of Body Composition, Daily Energy Expenditure and Evaluation of Maximal and Submaximal Aerobic Level.

Brown wrote the software for undergraduate physical education majors, but it's also been used in high school science classes and in hospital and community wellness programs. He'll be happy to share the programs and a description of the test protocol with you. For more information, write to Barry Brown, 2431 Magnolia Drive, Fayetteville, AR 72703.

Questions and Answers

Q. Our daughter will be taking the SATs soon, and she'd like to use our C-64 to help prepare for them. Is there any SAT preparation software available for the C-64?

Stephen Bacon
Austin, TX

A. Yes, there are quite a few SAT practice packages available for the C-64. You'll find a list of some of them in Table 2. *RUN* published a review of several of these packages in the September 1985 issue.

Q. My son devotes almost all his time to his computer. He's not interested in games, but in programming and BBSs. All this is fine, except his studies have suffered. I have often thought that if software related to his schoolwork were available, he'd be an A student. Can you suggest any such software?

Linda Kosier
Palm Beach Gardens, FL

A. Your son is already a step ahead of his classmates by knowing something about programming and telecommunications. For other subject areas, there are hundreds of tutorial programs on the market. Contact your son's teachers to find out where he needs extra help, and then write away for educational software catalogs. Get a number of them, so you can choose programs that will best fit your son's needs.

RUN published a detailed list of sources for educational software catalogs in the December 1986 Resource Center. To get going immediately, write for the Hammett Microcomputer Catalog, Hammett Micro. Division, PO Box 545, Braintree, MA 02184.

Q. I'm looking for programs to use with the Muppet Learning Keys developed by Koala Technologies. I called Koala, but they told

www.Commodore.ca
May Not Reprint Without Permission

me the product had been sold to Sunburst. When I called Sunburst, they said they do offer such programs, but the price they quoted is high for me. Are there any public domain programs that work with the Muppet Learning Keys? If not, is there information available that will help me write my own programs?

George Pardi
Medford, MA

A. I'm not aware of any public domain programs made for the Muppet Learning Keys. However, I recently received information from Sunburst about software that will let you program that keyboard tool yourself. Called Muppet Learning Keys Tool Kit and priced at $35, it provides routines you can add to your programs so they'll work with Muppet Learning Keys. The package includes documentation for teachers on how to incorporate the software into an elementary curriculum.

You have to know Basic to use the Tool Kit. For more information, call Sunburst at 800-431-1934.

Q. Last January's issue of Electronic Learning *included an article that said Commodore is dropping out of the educational market, that third-party software companies are providing less educational support, and that people should therefore be reluctant to buy Commodores for educational use. I've written letters to Bill Rothenbach and Nigel Shepherd of Commodore about this, but the only response I get is a denial that it's true. I'm wondering if the Commodore cutback is because of the company's financial woes. Can you get more information from Commodore? Those of us in education who want to continue using the best small computer in town need corporate support, and lots of it.*

Jim Aspin
Flint, MI

A. First of all, Commodore isn't dropping out of the educational computing market. I don't think it could, even if it wanted to, because of user demand. I see why someone would spread that rumor, though.

Commodore quite definitely went through a financially shaky period that affected all levels of the company. While Apple, IBM and Tandy have major educational marketing and support teams, Commodore has had only one person manning that job at their Pennsylvania headquarters.

From my recent contact with Commodore, things look stable. Although I haven't heard of any new educational projects and support, the company is retaining its educational dealers and putting some marketing effort into promoting education.

There are new educational products from other manufacturers arriving at *RUN*'s editorial offices, which certainly indicates continued interest in the C-64 on the part of third-party producers.

Over the years, much of the support for educators using Commodore products has come from grass-roots efforts like The Resource Center and the thousands of teachers, like yourself, who take the time to share information and advice. I expect that this grass-roots effort will continue as the primary support mechanism for Commodore educational users in the United States.■

If you're using Commodore computers for educational purposes (at home or in school) and would like to share your experiences through The Resource Center, write me a letter detailing the equipment you're using, subject areas you teach, grade level or age of your students, software you're using and any other information you feel like including.

Also, if you'd like to donate public domain educational programs to The Resource Center for sharing with other educators or parents, please send along a disk with a brief description of the program. Send correspondence and disks to:

Margaret Morabito

Table 1. *Steps in developing a parent volunteer computer lab.*

1. The coordinator
   a. Find someone knowledgeable about computers, or at least willing to learn.
   b. Have coordinator arrange training sessions for teachers and volunteers and schedule volunteer time in the lab.

2. Volunteers
   a. Recruiting
      1. Talk with parents.
      2. Place notice in school newsletter.
      3. Send a special notice home.
      4. Teachers to recommend volunteers.
      5. Offer training.
      6. Take any offer of time, whether it's once a week or once a month.
   b. Duties
      1. Load machines with software.
      2. Help teacher oversee computer use.
      3. Help the teacher answer questions.
      4. Turn off the equipment and put away the software.
      5. Try out new software and make recommendations to teachers.
   c. Training
      1. If possible, give each volunteer her own computer to train on.
      2. If possible, give volunteers a week between lessons to practice.
      3. Hold sessions to two hours.
      4. Give the self-tutoring version of the Hands-On course to those who want to work on their own.

3. Getting money for equipment
   a. Ask administration to budget funds.
   b. Ask your school's parent organization to help with fundraising.
   c. Ask school librarian to contribute from the library budget or for advice on getting donations from elsewhere.

4. School software catalog
   a. List programs available for various grade levels and subject areas.
   b. Schedule software sampling sessions to familiarize teachers and volunteers with new software acquisitions.

By DAVID BRADLEY

Telecomputing Workshop is a monthly column dedicated to the needs of RUN *readers who are using, or intend to use, a Commodore computer for telecommunications. We invite you to submit your questions or comments to:*

David Bradley
Telecomputing Workshop
c/o RUN *Magazine*
80 Elm St.
Peterborough, NH 03458

In last December's Telecomputing Workshop, on page 114, I presented a dialing program for the Mitey Mo modem. Unfortunately, it had a bug in it: The L in line 90 was supposed to be a 1. The program as printed does make the modem dial, but it dials many more times than it's supposed to. Change line 90 to:

```
90 N$=MID$(NU$,I,1)
```

I'm sorry about any inconvience this bug may have caused you.

I've been having trouble getting the software that came with my Total Telecommunications modem to work properly, and I suspect the disk is bad. Do you know how I can get in touch with the author of the program, so I can get a disk that works?

Bob Tischer
Starkville, MS

I haven't been able to find the author's address, but I'll continue to look. Meanwhile, why not try some other terminal programs for your modem? You can get a disk full of them for $5, plus $1 for postage, from Public Domain Solutions, PO Box 832, Tallevast, FL 34270. Send $3 for their catalog.

A commercial program you might also check out is called Sixth Sense. It's distributed by Prism Software, 401 Lake Air Drive, Suite D, Waco, TX 76710; 817-751-0200.

I have a C-64 and a modem, and I'd like to set up a bulletin board. Where can I find software to get started?

Clemmon Stewart, Jr.
Tacoma, WA

There are a lot of public domain, freeware and commercial BBS programs around to choose from. One way to zero in on a good one is to ask SYSOPs in your area about the software they use: what equipment it requires, its good and bad points, where he or she got it, and so on.

If this doesn't work, find as many public domain and freeware BBS programs as you can and give them all a try. (They can be found on local BBSs, national on-line systems and through suppliers such as Public Domain Solutions.) Even if you don't find a public domain program you want to use, the experience will leave you better qualified to select a commercial program to satisfy your needs.

I've recently purchased a Commodore 1200 modem to use with my C-128. It seems to function well, but it has one peculiarity that puzzles me. I keep my modem/phone connected to the user port all the time. When I'm using the computer for something unrelated to the modem, the modem still tries to answer incoming calls. Is there a way to prevent this without unplugging the modem or the incoming phone line?

Joseph A. Gillis
Annapolis, MD

There's a small device called a ring silencer available from Radio Shack that will prevent the ring signal from getting through to the 1670. It's part #43-127 and costs $7.95.

The following one-liner will also do the trick, but it has to be loaded or typed in every time you turn on your computer:

```
10 OPEN2,2,0,CHR$(6)+CHR$(0):
   PRINT#2,"ATS0=0"
```

I have a C-128 and an Avatex 1200 1200-baud modem (which is not fully Hayes-compatible). The terminal program I use, Simple Term 2.3, won't run my modem on the 1200-baud option. Can you suggest a terminal program that uses the Xmodem and Punter protocols and will run my modem at 1200 baud? If not, does anyone want to buy a modem?

B. J. Booth
Fremont, MI

Don't throw away your Avatex yet. The public domain terminal program

www.Commodore.ca
May Not Reprint Without Permission

DarkTerm 4.B will do what you're asking. You can order it from Public Domain Solutions (address above) for $5 plus $1 postage.

Recently I acquired a Volks 6480 modem with its AutoCom 64 software. This combination works fine, but I can't get the modem to work with the more flexible VIP terminal software. No matter how I set the modem, it won't dial.

Andy Zajac
Windsor, CT

I don't know of a way to make the Volks 6480 work with the VIP software, because this modem dials in an unusual way. There are some public domain programs for the 6480 that are more flexible than AutoCom, however. If you belong to an on-line service, look for one there. Otherwise, I expect Public Domain Solutions (address above) may be able to help you, and you can check with other sources of public domain software. *RUN* published a list of them on page 48 of the November 1986 issue. To get a copy of that issue, send $3.50, plus $1 for postage and handling, to *RUN* Magazine, Back Issues, 80 Elm St., Peterborough, NH 03458.

I've been using a system consisting of a C-64, a VicModem, a Datassette and a black-and-white television to access BBSs. Now I'd like to start uploading to and downloading from the BBSs. Is there a program I can use with my system for this?

John Rennie
Markham, Ontario, Canada

CXTerm, version 1.04, is what you need. This 300-baud program up- and downloads using the Xmodem and Punter protocols. I think CXTerm is available on Q-Link, but with a tape drive you can't download it from there. Public Domain Solutions (address above) will send it to you for $7.50 plus $1 postage.

In last November's Telecomputing Workshop, you stated that the Plus/4 is the best telecommunications machine Commodore has on the market. Are there any modems available that run, or could be modified to run, with the Plus/4 at 1200 and 2400 baud?

George Gakoumis
Willow Grove, PA

The Plus/4 is really better described as "the Commodore machine with the most telecommunications potential," since it's received little support. Regardless of terminology, however, any standard RS-232 modem should work with a Plus/4 and an RS-232 interface connected to the user port. Just be sure you get one that offers 1200 and 2400 baud. The Omnitronix Deluxe RS-232 interface is one possibility. It costs $49.95 and is available from Omnitronix, Inc., 760 Harrison St., Seattle, WA 98109.

I want to run C-Net BBS software on a system that includes a C-64, an Avatex 1200 modem and an RS-232C interface, and I need to know which modem setting to use. My choices are:
1. HESmodem II/Mitey Mo/1064
2. 1650/Total Tel/Westridge
3. Hayes/ProModem/1670

Kevin Brown
Hanceville, AL

I'm afraid that none of these options will let you use your Avatex with C-Net. You might look around for an update of the program or for other BBS software that will support your modem. If that fails, you'll have to get a different modem.

When planning a bulletin board system, it's best to find the software you want to use and then buy a modem that works with it. Getting the modem first, then trying to find software to go with it can be a frustrating experience.

We use four C-64s in our engineering department at work. How can I set up a network for these computers to share printers and other peripherals?

Eduardo P. Guillen
San Diego, CA

There are many hardware systems on the market that will let a number of C-64s access common peripherals. Schools often use setups like this, so I checked with some school boards. The system that came out on top in my survey is called ComSpec MicroShare. For more information about it, contact ComSpec Communications, 153 Bridgeland Ave., Toronto, Ontario, Canada M6A 2Y6; 416-787-0617.

I'd like to upgrade from my Commodore 1650 modem to a 1200-baud modem and still use my 1650-compatible terminal programs. Is there a 1200-baud modem available that would fill the bill?

Steve Heater
Sutton, Ontario, Canada

I know of only one such unit—the Pocket Modem 1200. It plugs directly into the user port and works just like a 1650 at 300 and 1200 baud. I've tested one of these modems and was impressed. For more information, contact PDQ Sales, 350 Main St. East, Milton, Ontario, Canada L9T 1P6; 416-876-1148.

Telecomputing Tips of the Month

If you have a Commodore SX-64 and are having trouble using QuantumLink, try plugging one end of a serial cable into one of the serial ports. Don't plug the other end into anything; just let it hang.

When you invest in a modem, don't let price be the determining factor in deciding which to buy. There are two basic standards for C-64-compatible modems: 1650 and Hayes. Try to stick to one of these standards, because most terminal programs, be they commercial or public domain, support them. Definitely avoid the Volks 6480 modem. I've seen a lot of Commodore users go through a lot of grief because they couldn't find an adequate terminal program to go with it.

If you're thinking of running a BBS on a C-64 or a C-128 and are looking for a hard disk drive to go with it, check out the 20-megabyte Xetec Lt. Kernal. It will load more than 110 times faster than the 1541 and, besides, it makes a great monitor stand! By the time you read this, the Lt. Kernal should be available all over North America. For more information, contact your local dealer or Xetec, Inc., 2804 Arnold Road, Salina, KS 67401; 913-827-0685.■

The CHIEF ADVANTAGE

ALL NEW

HARD DISK DRIVES

FOR COMMODORE C-64 & C-128 Computers

FEATURES:

- C-128 Compatible w/fast serial & burst mode.
- Operates at 2mhz on a C-64
- Fast Transparent Operation.
- Built in 1571 Floppy Drive.
- Supports all 2.0 to 7.0 DOS Commands
- Runs CP/M w/ multi Device recognition A-8...D-11.
- Dual Serial Ports
- Device Selectable 8-11 or 8-30 Software..
- No special Interface required.
- Utilities Disk Included
- Built in I.C.T. Turbo Loader for C-64 Operation.
- Complete operating manual..
- 1 Year Full Warranty.
- Support BBS on line-24hrs daily 301-371-4020.

MINI CHIEF™

10 Meg MODEL MC-10 **$595.00**

20 Meg MODEL MC-20 **$695.00**

10 or 20 MB housed in a Commodore 1571 Enclosure with Floppy Drive with Fan Cooling & External Power Supply

DATA CHIEF™

20 Meg+ MODEL HFD-20 **$795.00**

20 MB Expandable System with A Commodore 1571 Floppy Drive in a PC Style Enclosure and a 135 Watt Fan Cooled Power Supply.

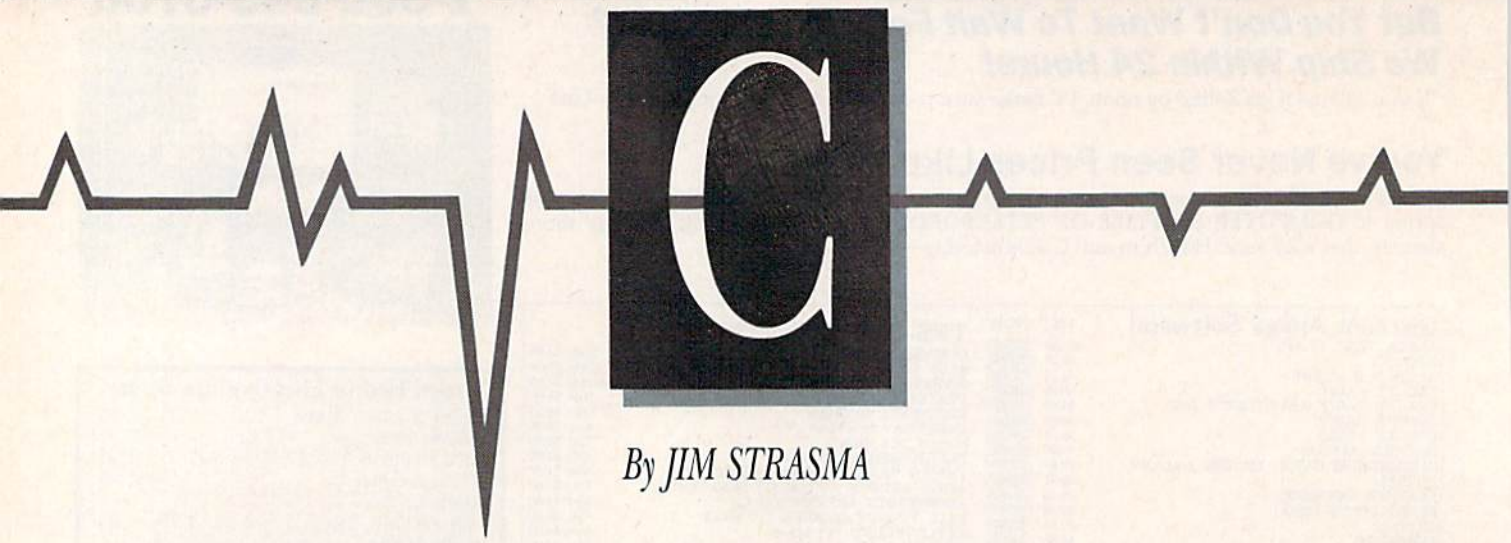
COMMODORE CLINIC



By JIM STRASMA

Do you have a problem or question about your Commodore computer? Commodore Clinic can help. Just send your question on a postcard to:

Jim Strasma
Commodore Clinic
PO Box 6100
Macomb, IL 61455-6100

Queries are answered only through this column, and, due to the volume of mail, only questions likely to appeal to the majority of our readers can be published.

SOFTWARE

Q: I own a C-128, and I'd like to know why Commodore and other companies don't include C-64 and C-128 versions of a program on the same disk—one side for the C-64 and the other side for the C-128 mode version.

Mike Douglass
Rochester, NY

A: One reason may be that there are some serious problems with using the second side of a C-128 disk.

Since many C-128 owners use 1541s, however, software manufacturers might consider putting both C-64 and C-128 versions of a program on the same side of a 1541 disk. All that's required is a short, initial loader program to detect which machine or mode loaded it, and then to load the appropriate main program. This can be determined either by checking the contents of a location in ROM that differs between C-64 and C-128 modes, or by noticing the address at which the loader has been stored, since that, too, differs in the two modes.

Q: The various ads I've seen for music software never indicate whether the programs can be used as background music in my own programs. Do you know of a music package that can do this?

E. H. McCuaig
San Mateo, CA

A: Master Composer, from Access Software, does what you ask. Once you enter this program, its songs compile into executable machine language programs that load and run separately from, but concurrently with, your programs via IRQ interrupts.

Q: Last May I received a Commodore PET 4016 with no instruction manual. I've written, visited and phoned outlets likely to stock the book, but none have copies, since the PET is no longer being manufactured. I'd be deeply grateful if you could tell me where I can purchase a manual for my PET computer.

Sister M. Davidica
Danville, PA

A: In my opinion, the best PET manual still available is the third edition of the *PET Personal Computer Guide*, from Osborne/McGraw-Hill. Order the manual from them by calling 800-227-0900. The reason I think it's so good is that my wife and I wrote it.

While we're on the subject, your plight illustrates a common problem. When computers go out of production, products for them also disappear from stores, but the machines themselves remain useful for many years.

Based on the mail I've received, though, programs and accessories for the PET and VIC that couldn't be given away two years ago can now be sold for their original list price. This is a great opportunity for anyone willing to stock and sell them. How about it, dealers?

HARDWARE

Q: I'm having difficulty understanding some of the terminology for wire and cable connections. What is a shielded conductor, a 9-pin conductor, etc.?

Eric Romero
Brooklyn, NY

A: Cables come in shielded and unshielded versions. Shielded cables are wrapped in a layer of insulation to keep its signals from either affecting or being affected by signals outside the cable. So, of course, cable TV companies use shielded cables, but electric extension cords have unshielded cables.

Cables also vary in the number of wires they contain and in the type of connectors they use to terminate the wires at each end. It's reasonable to expect a nine-pin conductor to refer to a cable with nine insulated wires, each carrying its own signal and ter-

www.Commodore.ca
May Not Reprint Without Permission

minating with its own metal pin in the connectors at each end. However, as is often the case, Commodore's nine-pin cables leave a couple of pins unconnected to any wire.

Q: I bought my Leading Edge Banana Gorilla printer from DAK Industries, and I want to use it with my C-64. The printer has a 25-pin female interface. Where can I buy the male counterpart?

Rodney Mullineaux
Irvine, CA

A: As I recall, DAK Industries (8200 Remmet Ave., Canoga Park, CA 91304; 800-DAK-0800) sold an interface that connected to the user port of the C-64. However, the user port is not the best place to connect a printer, because few Commodore programs support RS-232 printers via the user port.

Instead, consider the Cardco PS printer interface, now being marketed by Supra Corporation (1133 Commercial Way, Albany, OR 97321; 503-967-9075). One end connects to Commodore's serial bus like other printer interfaces; the other end provides your printer with the necessary unidirectional RS-232 port. Just be sure your Banana Gorilla can communicate at 1200 baud, since that is the only serial communication speed supported by the PS interface.

Q: My 1541 disk drive refuses to rotate Maxell disks when the air is hot and muggy. And two programs on another disk won't load, even under cool and dry conditions. I finally resorted to removing the inner, rotating part of both disks and inserting them into Elephant covers. Do you have a better solution?

Barry Ketaner
Norfolk, VA

A: A couple of years ago, Buck Buchanan, of Cardinal Software, made a study to determine the torque, or twisting force, required to rotate different brands of disks. Buck noticed definite differences, from a low of ¼ ounce for Memorex disks to a high of 1½ ounces for BASF disks. Maxell disks, however, required only half the torque of Elephant's. This suggests that the torque of one or both brands has been changed since those tests were made.

The most common cause of disk binding is from heavy weights on the disk during packing, shipping or storage, or from rough or careless handling that may smash a disk's jacket. From time to time I receive review disks that refuse to rotate because they've been pressed flat. So, your solution, removing the disk from its jacket and installing it in a new one, usually works regardless of the brand of the new jacket.

Try using a direct-drive disk unit, such as the MSD, to read the disk. The Teac drives in the MSD generate more torque than the 1541 and automatically adjust for proper rotation speed regardless of the tightness of the jacket. If this works, copy the entire contents of the disk to a new blank disk of a brand that works well for you, and use that exclusively.

Another solution is to use your computer in an air-conditioned room. That would solve both the heat and moisture problems, making both you and your computer system more comfortable.

Q: With respect to possible damage, is there any difference between physically plugging or unplugging a cartridge with the computer on and electrically switching the cartridge on or off when it's mounted on an expansion board?

William Pace
S. Charleston, WV

A: There's a huge difference! It is extremely dangerous to your system to physically connect or disconnect a cartridge with the computer on. If the cartridge doesn't mate precisely with the contacts in the cartridge port, they'll almost certainly short out and damage your computer.

To switch a cartridge on or off, either first turn off the computer and all connected accessories, or else use an expansion board with an on/off switch for the cartridge.

Q: I just received a new printer, and I'm happy with it except that it uses the same serial port on my computer as does the disk drive. I'm aware of a device that allows both a printer and a disk drive to be con-

Super Disk Utilities

The ultimate utilities disk for the C128 & 1571. Included among its many features are:

- Two drive copy program for the 1571
- Single drive copy program for the 1571
- File unscratch utility
- Create auto-boot utility
- Lock & unlock files utility
- File copier for one or two 1571's
- Utility to format in 1541, 1571 or IBM system 34 format
- CP/M Plus disk copier
- Direct DOS commands
- Analyze disk format utility (including Commodore & alien disk formats)
- Write protect utility
- Disk Editor - Individually trace files, edit in hex or ASCII simultaneously, print in hex and ASCII to any sector on disk
- CP/M Plus disk editor
- RAM Writer - Read & write to drive RAM
- ROM Reader - Read drive ROM
- Assemble/Disassemble drive RAM & ROM
- Erase a track or bulk erase a disk
- Most utilities also work on 1541
- And much, much more!

A complete utilities disk for only **$39.95!**

1541/1571 Drive Alignment

1541/1571 Drive Alignment reports the alignment condition of the disk drive as you perform adjustments. On screen help is available while the program is running. Works on the 1541, 1571 in either 1541 or 1571 mode, C64, SX64, C128 in either 64 or 128 mode! Autoboots to all modes! Manual includes instructions on how to load alignment program even when the drive is so misaligned that it will not load anything else. Eliminate downtime & costly repairs! Only **$34.95!**

Super Disk Librarian

Full featured disk cataloging & library system for the C128 in 128 mode. Catalogs up to 1000 disks and 15,200 program names! Operates in fast mode with 80 column display. Reads & catalogs 1541, 1571 & CP/M Plus disk directories. Reads heavily protected disks. Catalog up to 25 programs on a disk with a single keypress or selectively catalog programs. Stores in seven categories: Games, Education, CP/M, Archival, Telecommunications, Utilitities or Productivity. Recall by category, program name, disk name or locater number. Printer output includes library index, full library report, master program list, category program list & disk labels. A second drive can be addressed as a data disk. Only **$29.95!**

Super 64 Librarian

Complete disk cataloging and library system for the C64. Reads & files disk directories in 15 user-defined categories. Individual selection of program names to be filed. Includes space for user comments about programs. Recall by category, program name, etc. Printer output includes disk labels. Catalogs approximately 200 disks dependant upon number of programs and length of user comments. Organize your C64 disk library for only **$29.95!**

FREE SHIPPING & HANDLING! Illinois residents add 8% sales tax. Send check or money order to:

www.Commodore.ca
May Not Reprint Without Permission

nected to the C-64 at the same time. Any information is appreciated.

Barry Ashworth
Tucson, AZ

A: If you look at the back of your disk drive, you'll see a second serial bus connector. To use your disk drive and printer at the same time, connect the drive to the serial port at the back of the computer, and connect the cable running from the printer to the other port on the back of the drive. This is known as daisy-chaining, which allows you to hook up several devices at once.

Q: Should Commodore keep its registered C-128 owners up to date about any enhancements and repairs to their machines?

D. N. Tjelios
St. Bruno, Quebec, Canada

A: Logically, yes, Commodore should send occasional mailings to its customers to interest them in further Commodore purchases and upgrades. In practice, however, it would be a miracle if you did hear from Commodore, particularly about an upgrade. This seems foolish and shortsighted, but it is a fault also occasionally shared by other computer manufacturers, like Apple and IBM. The best way to keep up with enhancements is to continue reading computer magazines like *RUN*.

As for specific repairs to the C-128, I've mentioned faulty cartridge slots on some of the earliest C-128s, and the faulty response to the shifted-Q key, both of which reportedly have been fixed in newer machines.

To that I now add the dangers of using the flip side of a 1571-formatted disk in C-128 mode. The most serious problems are with the drive's tendency to mix the BAMs and to corrupt files that have portions on both sides of the disk. A new ROM for the 1571 (currently called Rev 5) may be needed to fix the problems. In the meantime, ICPUG's Jim Kennedy in England and well-known author Paul Blair in Australia recommend leaving at least 664 blocks free on a double-sided, 1571 disk.

In the past, Commodore allowed owners of problem equipment to purchase the needed upgrades. Ask an authorized Commodore service center to order and install the upgrade for you.

PROGRAMMING

Q: Is it possible to write a subroutine that allows the user to create Data statements that will be included in the listing after the program is run?

William Word
Bellwood, IL

A: Yes, it's possible, and most user group libraries provide Datamaker programs to make Data statement values out of the contents of selected memory locations. This is useful in converting a machine language program into a form that's easier for non-programmers to enter.

However, apart from such specialized uses, what you propose is a self-modifying code, which is a nasty violation of good programming. It's also unnecessary. Rather than add Data statements to a listing, why not just open a file and dump your data into the file? That's what files are for, after all, and we'd all be better off if more programmers used them.

Q: What is Reverse Polish Logic?

Kam Wong
Edmonton, Alberta, Canada

A: There are three possible ways to write a mathematical expression; 1 + 2, the one all of us use every day, is one way. When the plus operator (+) is in its usual location between the two operands (1 and 2), that is known as infix notation.

A second way is Polish notation. In this form, the operator precedes the operands, and it's expressed as + 1 2. The advantage of this version is that it speeds the programs used to evaluate them, since parentheses required to describe complex expressions aren't needed.

The third way, known as Reverse Polish notation, places operands before the operator, expressed as 1 2 +. Hewlett-Packard calculators and the Forth programming language use Reverse Polish Notation because expressions are efficiently stored and retrieved with the stack operations included in the machine language instruction sets of nearly all microprocessors.

Q: I've written a program, similar to the one below, that uses a loop to print a long series of computations:

```
10 OPEN 4,4
20 CMD 4
30 FOR I = 1 TO 99
40 : PRINT A$(I)
50 : GET B$
60 : IF B$ = CHR$(20) THEN 80
70 NEXT I
80 PRINT#4
90 CLOSE 4
```

The problem is that, after printing the first item to the printer, the program resumes printing to the screen, as though it had dropped the CMD 4 command in line 20. Removing lines 50–60 eliminates the problem, but then I can't terminate the loop when necessary.

Why is this happening, and what can I do to remedy it?

John Busch
Oxon Hill, MD

A: The program is reverting to the screen output as a safety measure, triggered by the Get command in line 50, while output has been diverted from its usual device via CMD. Rewrite your program without CMD. Also change line 60 to exit the loop cleanly. This avoids overloading Basic's stack with half-finished loops. Otherwise, you might eventually run out of stack room and halt the program.

Here's the new version:

```
10 OPEN 4,4
30 FOR I = 1 TO 99
40 : PRINT#4,A$(I)
50 : GET B$
60 : IF B$ = CHR$(20) THEN I = 99
70 NEXT I
90 CLOSE 4
```

Notice that it's also two lines shorter than the version using CMD. The only time I use CMD myself is to list a program on the printer, and then only because there is no other easy way to do it.■

RUN Amok

Item: There were several errors in the sidebar, "How To Enter RUN Script 128," on page 70 of last December's issue. In step 3 of the instructions, "then enter Listing 3" should read "then enter Listing 4," and "containing Listings 1 and 2" should read "containing Listings 1, 2 and 3." In the next paragraph (step 4), the two references to Listing 4 should both read "Listing 5," and "containing Listings 1, 2 and 3" should read "containing Listings 1, 2, 3 and 4."

Item: Also referring to "RUN Script 128" (in *RUN*, December 1986, or in the November-December 1986 ReRUN), the program requires a minor modification in order to be compatible with the Define Macros program (*RUN*, January 1987). Make the following changes in the order shown:

Listing 3 (Create ML) needs two changes. First, remove NEXT A from the end of line 90 and type in a line 95 that reads 95 NEXTA. Second, in line 120, replace P(DEC("3A76")) with P(DEC("3AF4")); then save this modified Create ML to disk before running it.

Finally, type in and run the following listing to modify the ML program. Again, be sure to save it to disk before running it.

```
1Ø REM RUNSCRIPT 128 MACRO PRINT
   ER PATCH              :REM*216
2Ø BANK 1: POKE47,DEC("5ØØØ") AN
   D 255:POKE48,DEC("5ØØØ")/256:
   CLR:REM RAISE START OF VARIAB
   LES                   :REM*156
3Ø DATA"1Ø39","1Ø","1Ø3A","AØ","
   26DC","3Ø","3AF3","9F"
                         :REM*128
4Ø PRINT"INSERT THE DISK WITH TH
   E PROGRAM "CHR$(34)"OB.RS128
   2.4Ø"CHR$(34)" ON IT, THEN PR
   ESS ANY KEY.":GETKEYA$:BLOAD"
   OB.RS128 2.4Ø",B1,P(DEC("Ø4ØØ
   "))                   :REM*168
5Ø FORA=1TO4:READA$,B$:BANK1:POK
   E DEC(A$),DEC(B$):NEXT
                         :REM*2Ø6
6Ø PRINT"INSERT THE SAVE DISK TH
   EN PRESS ANY KEY.":GETKEYA$:S
   CRATCH"OB.RS128 2.4Ø":BSAVE"O
   B.RS128 2.4Ø",B1,P(DEC("Ø4ØØ"
   ))TOP(DEC("3AF4"))    :REM*234
7Ø PRINT"FIXED OB.RS128 2.4Ø PRO
   GRAM IS SAVED."       :REM*148
```

Item: "Master Menus" (1987 Special Issue, p. 58) makes reference to lines 1365–1455, which hold the instructions for branching to sections of your program, but these lines were omitted from Listing 2. They read as follows:

```
1365 GOTO 1460 : REM CHOICE #1
1375 GOTO 1460 : REM CHOICE #2
1385 GOTO 1460 : REM CHOICE #3
1395 GOTO 1460 : REM CHOICE #4
1405 GOTO 1460 : REM CHOICE #5
1415 GOTO 1460 : REM CHOICE #6
1455 GOTO 1460 : REM CHOICE #7
```

Item: Also in the 1987 Special Issue, on page 85, line 20 in the little program at the bottom of the center column should read: INPUT#15,A,B$,C,D.

Item: The 1987 Special Issue also has an error in the third command of the "KoalaPainter to Print Shop" Magic item on page 129. It should read 4000, not 400.

Item: In the January 1987 issue, the last answer in Commodore Clinic (p. 109) states that CHR$(143) is the screen-clearing code. This is not so. It should be CHR$(147), the hexadecimal equivalent for which is $93.

Item: In order to make the program for "Retir'eze" (p. 68, February 1987) compatible with the C-64, the author replaced ELSE with the keyword GOTO in lines 650, 670, 690, 710, 730 and 750, thereby making the published checksums of those lines invalid. The checksums should be 160, 96, 134, 166, 62 and 184, respectively. 128 users can resubstitute ELSE for GOTO in those lines to get the published checksums.

Item: The program for "Break the 128 Memory Barrier" (February 1987, p. 92) can be deactivated by pressing the run-stop and restore keys simultaneously. The author, M. Garamszeghy, has modified the program to keep this from happening, and you can get the details by writing him at 67 Callender St., Toronto, Ontario, Canada M6R 2H2.

Item: April 1987's Telecomputing Workshop contains an error in the little program answering Errol Korn's question on page 78. The quotation marks in line 20 should be double, not single.■

SX-64/Model 100 Hookup

I had so looked forward to connecting my SX-64 to my Radio Shack Model 100 after reading about the forthcoming article in the February 1987 issue of *RUN*. Imagine my consternation when I read that I must use ML Perfect Typist 2.0, for the C-128, to type in the data transfer program. Can you explain how I can use a typist program for the C-128 to prepare a machine language program for my SX-64?

Nathaniel F. Ireland
Marlow, NH

We're sorry for the confusion. ML Perfect Typist 2.0 works on both the C-64 and the C-128. However, in order for the checksums to come out right, you need to delete line 10 of the transfer program.

Editors

Calendar Generator Changes

Many readers have written in to say they've had trouble typing in line 300 of my Easy Applications program, Calendar Generator, in the January 1987 issue of *RUN*. To make typing in this line easier, you can split it into two separate lines as follows:

```
300 CE=(64-LEN(MO$(MO))*2-12)/
    2+9:PRINT#4
302 PRINT#4,SPC(CE)CHR$(14);MO$
    (MO)+" ";YR
```

I'd also like to thank the readers who caught an error in my logic. In writing the program, I forgot to take into account that, while all century markers are divisible by 4, they are not all leap years (1900 and 2100, for instance). Adding the following line will keep Calendar Generator from printing them out as leap years:

```
63 IF ND(2)=29 THEN IF (YR/400)-INT
   (YR/400)<>0 THEN ND(2)=28
```

Michael J. Martone
Parsippany, NJ

Update to Notepad Update

In my 64 Notepad Update program that appeared in the January 1987 issue of *RUN*, I used a Commodore-specific command that centers the program output on the page. From readers' letters, I've discovered that this command unfortunately makes non-Commodore printers print the number 20 at the beginning of each line. To correct this problem if you have a non-Commodore printer, remove the REM in line 127 of Listing 2, on page 60, and replace it with POKE MEM+103,177. The printout won't be centered, but the 20s will disappear.

Robert C. Kodadek
Aston, PA

Typing In Crosswords

I've received several letters from readers who can't get my Crosswords program on page 76 of the January 1987 *RUN* to work. They all entered the program using Perfect Typist, and their checksums wouldn't come out right. The difficulty has come from using shifted spaces—or even no spaces—to separate the graphics characters in lines 2100 and 2120. When you're typing Crosswords in, be sure to use unshifted spaces in those spots.

John M. Smyczynski
Warren, OH

More on Superbase

I'm writing in regard to Superbase 128, which was reviewed by John Premack in the October 1986 issue of *RUN*. I found a number of bugs in the initial version of the program, so I sent for the upgrade (for $10). It fixes the problems I was having, and Progressive Peripherals claims it also solves the problem, mentioned in the article, with accessing files on some 1571 disk drives.

Concerning the letter about the review from Stephan Kage in the December Mail RUN, I use a Skyles interface with my SFD-1001, and it works fine.

Now a couple of questions. Do you know of any user's groups for Superbase? Also, can the backup function of Superbase 128 be performed on two disk drives rather than on a single or dual drive?

Robert Wright
1013 N. Glendale Ave.
Glendale, CA 91206

Thanks for the tips, Robert. As to Superbase user's groups, neither I nor the folks at RUN *or Progressive Peripherals know of any. If you subscribe to QuantumLink, or any other national on-line network with an active Commodore section, you might check there. Even though you may find no*

Have your Commodore® look as smart as it works.

Consolidate your 64, 64C and 128 system with the Command Center.

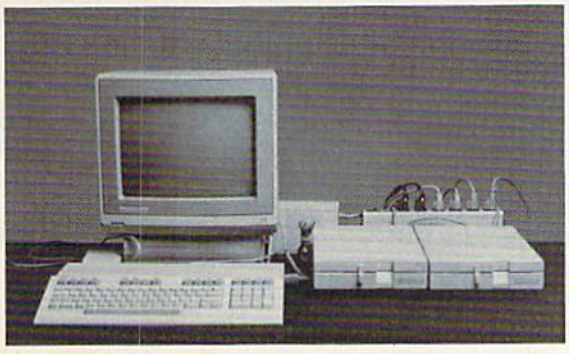
With the Command Center, your system is compact and complete.

Get your workspace back again.

The Command Center will untangle your wires, unclutter your desk and put peripherals at your fingertips. Condensing your whole system into one compact unit, you might consider it the **ultimate** Commodore peripheral. You get Commodore value with the look of a more expensive system.

Just look at all it includes:

- **Built-in AC Power Strip** with power surge and voltage spike protection, line noise filtering and power outlets.
- **Built-in Drive/CPU Cooling Fan** to prevent overheating.
- **Modular Telephone Plug**, with its own on-line/off-line telecommunications switch. (Option on 64 and 64C).
- **Master AC Switch** for easy system power-up.
- **Single or Dual Drive Configurations** with the standard drive insert.



Without the Command Center your Commodore peripherals look cluttered and take up most of your desk top.

Many built-in conveniences add to the Command Center's value.

®Commodore is a registered trademark of Commodore Electronics Ltd.

Mail RUN

formal user's group through a network, you're sure to find plenty of experienced users. Also, your full address is appearing in Mail RUN so any readers who know of a Superbase group can contact you.

In answer to your second question, since Superbase's built-in, single-drive backup function is little more than a buffer-type copier, most users are better off using one of the disk backup utilities available both commercially and in the public domain. Unfortunately, because your files are on double-sided, double-density SFD 1001 disks, a disk copier may not work.

However, you can probably use Jim Butterfield's Copy-All (64 mode). This old standby lets rapid file-by-file transfer proceed without operator intervention until the target disk is full. Since Copy-All can transfer files between devices of different capacity, you should even be able to back up data from your 1001 to several 1541 or 1571 floppies. I use Copy-All to back up a CBM 9060 hard disk to SFD 1001 floppies with no difficulty.

John Premack

More Software Salvos

I'd like to make a couple of comments regarding your article "The Software War" in the January 1987 issue of *RUN*. First, most software is overpriced. When the publishers want $40–$60 for a program, and yet they can sell it to discount houses low enough that the discount houses can sell it for $20–$25 less, and both the publisher and the discount house can make a profit, then the original publisher's price has to be too high.

The $10 some companies charge for a backup copy is also too high. I'm sure $5 would cover their postage and "handling." Batteries Included has the right idea. They include a dongle that lets you run the program on only one computer, yet it allows you to make an archival backup copy.

E. H. McCuaig
San Mateo, CA

Why don't manufacturers include a backup copy of their software with every disk? Sure, it would cost a little, but certainly not enough to price the program out of sight. That would make honest fellows out of a lot of technical crooks.

On a slightly different note, I end up using only about half the software I buy. The reason is twofold. Part of the time, the programs just don't live up to the advertisements. More serious are the cases where the programs are obviously good, but the instructions aren't as complete and specific as they should be. Users like me who aren't hackers have to be led by the hand. Trying to get the manufacturers to help does no good—I've beat my head against that stone wall until it's bloody.

J. M. Kinabrew, Jr.
New Orleans, LA

I've been stung too many times buying software only to find it doesn't live up to the manufacturers' claims, or that I need a program that operates differently. All these disappointments could have been avoided if I'd had access to the documentation before buying the program. Since I didn't, I tried out pirated copies, then bought originals of the programs I wanted to use.

I believe software manufacturers could discourage piracy by making documentation available separately from the program, for whatever price would cover the printing and distribution costs. Such distribution should be promoted as aggressively as the software, and the documentation should be available for direct ordering by consumers. It would also be nice if hotline services were extended to include questions on documentation from prospective buyers.

Mary D. Butcher
Hacienda Heights, CA

The C-64 and the Mentally Handicapped

I'm an audio-visual designer in an institution for mentally handicapped people and have just obtained a C-64 to use in my work. I'd like to hear from other people who might be using the C-64 to work with mentally handicapped children or adults, especially those who are profoundly or severely handicapped. I have no information about such usage here.

Perhaps the Resource Center column about Commodores and the handicapped in the February 1987 issue of RUN *would be helpful to you. It describes the work being done by Don Peterson of Tempe, Arizona, in developing input devices and various kinds of software for the physically and mentally disabled. He is making his software available free on disk and on-line through QuantumLink. We're also publishi g your full address so other* RUN *readers who are working with the handicapped can contact you. Good luck!*

Editors

Fastfile Review

The Fastfile review in the February 1987 Software Gallery contains some inaccuracies. Fastfile is targeted for small businesses, as well as the home. Also, leading zeroes aren't needed to ensure that each numeric field contains the same number of digits for sort and find specifications.

Partial string searches aren't limited to the asterisk as a wild card and the question mark for unknown characters. Fastfile also does fast searches using the >=, <= and <> commands and a Total command. The prompts for these designators appear on all search specification screens.

Fastfile does offer prompts during sort specification entry. When you type in the field number, the field name is automatically displayed. After you've input all field specifications, the program automatically provides an opportunity to edit.

Finally, Fastfile and word processors share similar power failure and operator error risks, and the 85 percent money-back guarantee lets the buyer try the software without risking the entire purchase price. All our dealers have agreed to abide by this policy.

Get 80-Column Displays on Your Composite Monitor

Innovative Computer Accessories (PO Box 789, Imperial Beach, CA 92032) sells two cables for the C-128 that produce monochrome, 80-column displays on your composite monitor with RCA jacks. The 80-Column Mono Cable ($9.95) is made for the Commodore 1701 and 1702 monitors. The 40/80 Column Switch Cable ($23.95) is for all other monitors; it lets you toggle between 40- and 80-Column modes.

Check Reader Service number 400.

Date- and Time-Stamp Your Programs

Time-DOS, a date- and time-stamping system for the C-64 and C-128 and the 1541, 1571 and compatible disk drives, is RAM-resident and transparent to any program where there's no conflict in memory usage. It date- and time-stamps program files automatically, but you may stamp all file types manually. Date- and time-stamp data for each file is displayed in the directory, along with the usual information. A software-driven real-time calendar clock is included. Available for $19.95 from Family Software, 3164 Surrey Lane, Aston, PA 19014.

Check Reader Service number 401.

Load Programs Instantly From Cartridge

The 16K Quick Brown Box, a battery-backed RAM program-storage cartridge from Brown Boxes (26 Concord Road, Bedford, MA 01730), loads any C-64 and C-128 program and stores it indefinitely for immediate accessibility. The box contains loader utilities to let you transfer Basic and machine language programs from disk to cartridge and incorporates a switch to toggle between 64 and 128 modes. Available for $59 plus $3 postage and handling.

Check Reader Service number 402.

Simplify Math Operations

Dynacomp (1064 Gravel Road, Webster, NY 14580) has added six new C-64 software packages to its line of science and math programs.

Multiple Integration ($19.95) computes integrals of any order based on integrand functions that you supply. Functions ($29.95) produces hi-res plots of functions. Linear Algebra ($29.95) solves simultaneous linear equations. Regression Analysis II ($39.95) performs bivariate and multivariate linear and nonlinear regressions and produces hi-res scatter plots. Nonlinear Systems ($39.95) solves simultaneous nonlinear equations. Linear Ordinary Differential Equations ($29.95) solves boundary value problems involving linear ordinary differential equations.

Help Students Build Spatial Perception

Building Perspective, a game of spatial perception from Sunburst (39 Washington Ave., Pleasantville, NY 10570), challenges students from the fourth grade up to predict how an array of buildings of different heights would appear if seen from above as they observe them from street level. Students check the views from all four sides and rethink the problem as they gather new information walking around the block. The Building Perspective package, for the C-64, costs $59 and includes a disk, backup and teacher's guide.

Increase Your Programming Power

System M2000, Version 2.0, a C-64 macro assembler package for beginning and advanced assembly language programmers, features standard 6502/6510 mnemonics, full macro capabilities, a full symbol-table dump and complete diagnostic information. The monitor traces a program through execution, moves and relocates programs and loads and saves binary files to disk. Available for $49.95 from Micol Systems, 9 Lynch Road, Willowdale, Ontario, Canada M2J 2V6.

Check Reader Service number 406.

Develop Your Muscles the Fun Way

The C-64 Computerized Muscle Exerciser and Trainer, called Comet, develops your muscle strength and tone by having you use isometric exercises to keep a helicopter on the screen from crashing. The harder you push or pull the Comet exerciser, the higher the helicopter flies. The documentation includes a guide that shows you how to do the exercises properly and explains which muscles each exercise develops. Available for $79.95 from BodyLog, 34 Maple Ave., Armonk, NY 10504.

PROFESSIONAL HANDICAPPING SYSTEMS

PROFESSIONAL SERIES™
PROFESSIONAL HANDICAPPING TOOLS from PROF. JONES

The New PROFESSIONAL SERIES™ "Software for the Serious Handicapper"
Our all new Professional Series™ represents the most advanced software available for handicapping Thoroughbred, Greyhound, and Harness racing.

- **Analysis Module™** $249.95
  The most complete and comprehensive bet analysis package available. This module is fast, powerful and easy to use. Full 50 tracks/kennels/etc. Analyzes race variables and recommends best bet strategies.
- **Multiple Regression Module™** $149.95
  Complete control over all program variables. Regresses out factors relating to winning animals and then automatically re-calculates the weighting formula as successive races are analyzed to derive the most precise formula possible!
- **Database Management Module™** $149.95
  Automatic storage of last ten races of all animals for inclusion into current race analysis. Higher win percentages due to more information. ($99.95 if purchased with Multiple Regression Module™).

Other specialized handicapping programs:

LOTTERY:
Advanced statistical analysis programs with proven number selection systems like R. Hand's 6-Digit Permutation, Dimitrov, and others!
Statistical Lottery Analysis™ $99.95
Enhanced Lottery/Lotto Analysis™ $129.95
Professional Lottery Analysis™ $149.95

FOOTBALL:
Complete football statistical prognosis of game scores, points spread, best bet, etc. Win/loss power ratings, previous four game analysis, multiple prediction results, and more!
Football Predictor™ $99.95
Football Addition™ $149.95
Professional Series Football™ $199.95
Bookie Buster™ Football Analysis $149.95

BASKETBALL:
Predict game results based on team strength ratings, past games stats analysis, etc. Evaluates avg. points scored, avg. points given up, wins/losses, point spreads, wild cards, & more!
NBA Basketball Analysis™ $99.95
Basketball Addition™ $149.95

And many more programs available, call for a copy of our catalog!

Handicapper's Bulletin Board now available. The Prof's NFL & NBA weekly picks! Call for hrs. & Ph. # . / Master Handicapper™ VHS training tapes available. Learn handicapping faster and easier! / Portable PC's w/built-in handicapping software available. Call for more information.

Terms: Free shipping all software. Add $6.00 COD / $6.00 UPS Blue / $9.00 International delivery / ID residents add 5%. Allow 3 weeks when paid by personal check. Prices above are for cash or money order only. Add 3% for Visa, MasterCharge, and AMEX. Prices subject to change.

THE AMAZING
VOICE MASTER®

ENTER THE FINAL FRONTIER OF MAN-TO-MACHINE COMMUNICATIONS

There is nothing else like it. Voice Master gives both speech output and voice recognition with this single hardware product! Your voice controls programs, or home appliances, robots, and more with spoken commands. Verbal response back gives status, verifies, or requests your reply! Speech output and recognition patterns are recorded in with your voice. Or use the voice of your friend, boss, teacher, mother, even the family pet! Programming is simple with new commands added to BASIC. A music bonus program lets you write and compose musical scores simply by humming the tune. Unlimited applications for fun, education, and commercial use. Design your own programs for profit. Speech and recognition quality unsurpassed by even the most sophisticated machines. Only Covox provides this high-tech marvel at a price less than most common peripherals.

The Covox Voice Master comes complete with all hardware and software for only $89.95. (Add $4 shipping and handling for USA, $6 Canada, $10 overseas.) Available for Commodore 64/128, Apple II, II+, IIc, IIe, Atari 800, 800XL, 130 XE. Specify when ordering. Visa, MasterCard phone orders accepted.

Call or write for FREE Voice Master Infopak and special combination package offers.

How to Type *RUN* Listings

To simplify typing *RUN*'s C-64 and C-128 program listings, we include checksum numbers. These follow a REM statement at the end of each line (e.g., :REM*123) and necessitate your using *RUN*'s Perfect Typist programs, listed below.

Type in 64 Perfect Typist (Listing 1) for 64 programs, or 128 Perfect Typist (Listing 2) for 128-mode programs, and save it to either tape or disk before running. When you want to type in a 64- or a 128-mode program, first load and run the appropriate Perfect Typist listing. Jot down the two SYS numbers that appear on your screen. They are the SYS numbers that you type in for deactivating and reactivating the checksum program.

After Perfect Typist has been loaded and run, start typing in the program listing from *RUN*. After you press the return key to log in each line, a 1-, 2- or 3-digit number will appear below the line at the left margin. This is the checksum number, ranging from 0 to 255.

If this matches the checksum printed in the listing after the :REM*, you have typed that line correctly. You then type the next program line right over the previous line's checksum value. If the checksum numbers do *not* agree, analyze the line on screen for errors or omissions. Make the needed changes and press the return key again to log them in. A new checksum will appear in place of the old one. Compare this to the magazine's number and then proceed to the next line.

When you've finished typing in your program, disable the Perfect Typist by typing in the appropriate SYS number for either 64 or 128 mode, and press the return key. Now you can save your program as usual, but before attempting to run the new program, turn the computer off and back on to completely clear out the Perfect Typist program.

You may save an incomplete program any time and continue it later. To do so, reload and run the Perfect Typist program, then load the program you were working on, list it, and continue from where you left off.

The 128 Perfect Typist will work in either 40 or 80 columns. Also, it lets you use the C-128's automatic line-numbering. If Auto is on, the checksum will be printed below the line you just entered, and the C-128 will place the next line number below the checksum.

All listings in *RUN* have been translated so that the graphics and control characters are designated as understandable key combinations. Follow instructions inside curly brackets. For example, {SHIFT L} means you should hold down the shift key and press the L key. What you see on your screen will look quite different from what is designated inside the brackets. Another example is {22 SPACEs}, which instructs you to press the space bar 22 times.

June

COMING ATTRACTIONS

● **COMMODORE ENTERS THE IBM MARKET**—Commodore officials are confident as they pitch their hats into the fiercely competitive IBM ring. Find out why in this close-up look at Commodore's PC clones.

● **THE EXPANDING UNIVERSE OF GEOS**—The enhancements keep coming for GEOS, Berkeley Softworks' alternative operating system for the C-64. In the June issue, read about the latest GEOS offerings, including Writer's Workshop, a group of programs for desktop publishing; a desktop accessory called geoDex; a file utility called geoFile; and geoCalc, a full-featured spreadsheet.

● **R FOR AN AILING COMPUTER**—When your Commodore is under the weather, you might save money by making minor repairs yourself. Learn how to identify which part of your system contains the problem.

● **SPECIAL FOCUS ON EDUCATION**—Commodores in education is the theme of several articles scheduled for the June issue. Software Gallery will assess a number of the latest educational software packages on the market; The Resource Center will help teachers select gradebook programs; and a type-in program called Robotgraph will reinforce elementary students' mathematics skills.

● **NOTEPAD UPDATE**—Our popular notepad program that opens a text window for storing programming reminders takes on a new dimension with this one-key DOS command center.

TIRED OF WAITING FOREVER FOR YOUR PROGRAMS TO LOAD?

INTRODUCING THE FAST LOAD CARTRIDGE FROM EPYX.

You're tired of waiting forever for your Commodore 64 programs to load. But it's no use glaring at your disk drive. Calling it names won't help, either. It was born slow — a lumbering hippo. You need the FAST LOAD CARTRIDGE from EPYX. FAST LOAD transforms your Commodore 64 disk drive from a lumbering hippo into a leaping gazelle. With FAST LOAD, programs that once took minutes to load are booted up in a matter of seconds.

FAST LOAD can load, save and copy your disks five times faster than normal. It plugs into the cartridge port of your Commodore 64 and goes to work automatically, loading your disks with ease. And that's only the beginning. You can copy a single file, copy the whole disk, send disk commands, and even list directories without erasing programs stored in memory.

And unlike other products, the FAST LOAD CARTRIDGE works with most programs, even copy protected ones, including the most popular computer games.

The FAST LOAD CARTRIDGE from Epyx. Easy to insert, easy to use and five times faster. So why waste time waiting for your disks to load?

Speed them up with FAST LOAD!

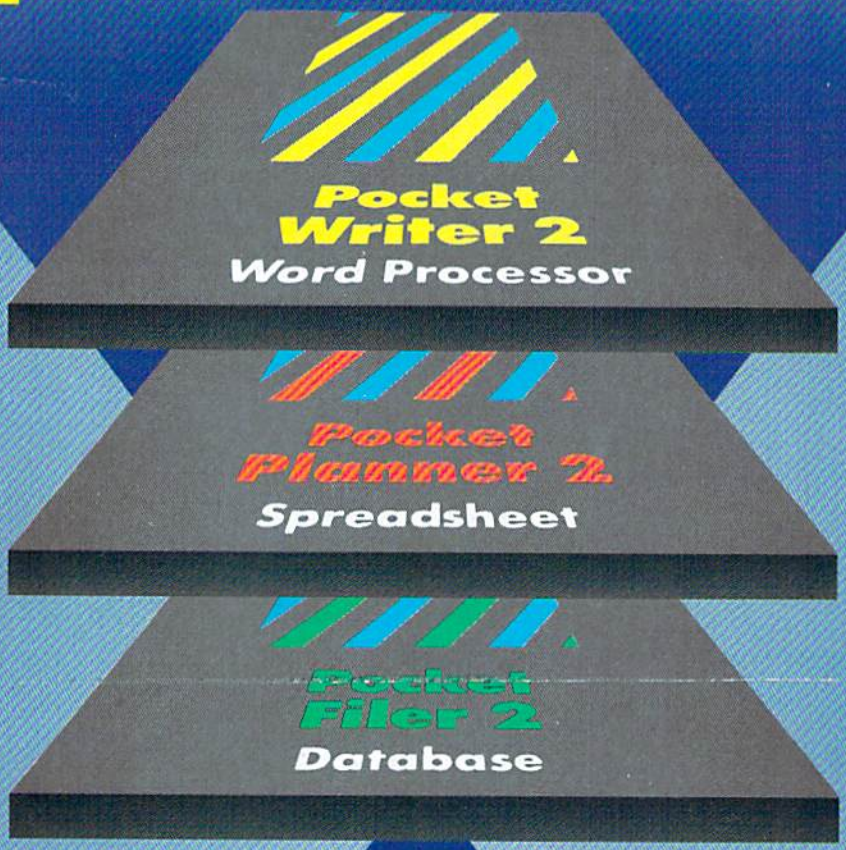
Super Solutions 2



The Best Just Got Better

We just did something only the best can do! We made our award winning* software for the Commodore™ 128 and 64 computers even better!

Introducing... Pocket Writer 2/word processor **Pocket Planner 2**/spreadsheet **Pocket Filer 2**/database

Our new Pocket 2 series offers features usually found only in much more sophisticated applications software. Features that include: compatability with the new GEOS operating system†, ability to work with the Commodore RAM expander to allow a RAM disk, mouse support with pull down menus, 1571 burst mode for faster file loading, increased support for two single disk drives, automatic configuration for screen color, format and printer selection†.

Sophisticated software, yes, and still easy to use. You can be up and running in under 30 minutes even if you haven't operated a computer before.

Now, when you upgrade your Commodore™ 64 to a 128, Pocket software helps make it a breeze. The new Pocket 2 software has both 128 and 64 applications on the same disk. So when you buy one you are actually buying two software packages. The cost only $59.95 (U.S.).

Serious Software That's Simple to Use

You can buy all three Pocket 2 applications, Pocket Writer 2, Pocket Planner 2 and Pocket Filer 2 in one convenient Superpak for the low price of only $99.95 (U.S.). A super way to discover all the integrated features of Pocket 2 software and save almost eighty dollars.

As a companion to Pocket Writer 2, a **Dictionary Disk** containing 32,000 words (expandable to 40,000) is available. The cost $14.95 (U.S.).

For those of you who have already discovered the many benefits of owning Pocket software; we offer all registered owners upgrade Pocket 2 software for only $19.95 (U.S.) plus 3.00 (U.S.) shipping and handling! Available only by writing to Digital Solutions Inc.

*Commodore's Micro-computers Magazine, independent reviewers, rated the original Pocket Writer 128/64 and Pocket Planner 128/64 software the "Annual Best of 1986" in the productivity category.

Superpak: The Solution That Saves Money!

Economical: $179.85 (U.S.) worth of software for only **$99.95 (U.S.)**
