# Numeric Keypad

Charles Kluepfel

Turn your keyboard into a "Numeric Keypad" for more efficient numeric input. The program lets you toggle to standard keyboard or numeric keypad. Written for the 64, we've added a version for the VIC.

You could type in numbers much faster and with fewer errors if the VIC-20 and Commodore 64 had a numeric keypad. This program offers this handy feature by redefining a set of keys to represent numbers instead of letters.

## VIC Notes On Numeric Keypad

Kevin Martin, Editorial Programmer

The VIC version of "Numeric Keypad" operates the same way as the 64 version, but uses an entirely different technique.

Program 2 is a BASIC loader which POKes machine language to the top of BASIC and then executes a SYS to start the interrupt. There is one major operating difference from the 64 version: Instead of using CTRL-N to start, it uses CTRL-.

The 64 version POKes BASIC and the Kernal ROM into RAM and then modifies the Kernal. This luxury isn't available on the VIC, but there is a way around it. The hardware interrupt can be used to change the characters stored in the keyboard buffer to different values.

To use this program with another, first LOAD and RUN. Since it resets the top of BASIC pointers, be sure your program doesn't reset them. If it does, Numeric Keypad will not function correctly.

### Technical Modifications

The more technically inclined might be interested in a few tricks used in the VIC version. The program uses the interrupt by pulling the A, X, and Y registers from the stack,

storing them in memory, and pushing them back.

Then, it pushes the high and low bytes of the new return from the interrupt address, the processor status byte, and the A, X, and Y registers to the stack. It then jumps to the normal interrupt routine. We push those bytes so that after it executes the RTI in the interrupt routine it will return to the interrupt instead of the main routine.

It then loads the keypress value in 197 to determine if the back arrow is being pressed. If it is, bit 2 of address 653 is checked to see if the CTRL key is being pressed. If it is, we jump to the routine to see if there is a value for any of the U, I, O, J, K, L, or M keys in the keyboard queue. If there is a value for any of these, they are changed to either a 4, 5, 6, 1, 2, 3, or 0, respectively. We then jump to the ending routine.

If either the back arrow or the CTRL key is not pressed, we jump to a routine to determine if the flag at 251 is set. If that flag is set, we go to the routine to change the characters in the keyboard queue. If the flag is not set, we jump to the ending routine, which pulls the A, X, and Y registers off the stack and executes an RTI to get back into the program.

# COMMODORE OWNERS... there is no need to spend thousands of dollars for a new business computer!

Nor is there need to go through the hassle and expense of learning a complicated new system.

An easy expansion will convert your **Commodore**® into a powerful business computer that will have you running productive business programs as quickly as 1, 2... *plug it in and grow!*

Begin with the *reliable new MSD® Super Disk*... the only disk drive readily available for **Commodore computers**. Gain instantaneous random access to programs and information, and save valuable time in executing your programs.

*Next*... interface the new, state-of-the-art dot matrix printer... the **Panasonic® KX-P1060** for hard copy that will support and document your task.

Add *expansion modules* for greater power and up to 64K memory. Our terminal emulators allow you to communicate with other computers, such as the SOURCE, DOW JONES or COMPUSERVE.

Complete the expansion process with software applications to address accounting, word processing, and other business requirements.

Don't spend thousands of dollars on a complicated PC... expand your **Commodore** and *get down to business*. The expansion is so easy you will be up and running the same day.

Call or come by today to learn more about Your Business Software's "Expand Your Business Plan."

When you run "Numeric Keypad," your computer will behave normally until CTRL-N is pressed. The cursor will disappear until you press another key. Then the M, J, K, L, U, I, and O keys will be 0, 1, 2, 3, 4, 5, and 6. By using these along with the numeric keys 7, 8, and 9, you have a numeric keypad. Pressing CTRL-N again toggles the keyboard back into its normal mode (again causing the cursor to disappear until you press a key).

You can put press-apply transfer numbers on the affected keys to help you remember which number each key represents. You should use very small ones, so they won't interfere with the normal identification of the keys. (Transfer letters and numbers are available at art supply stores.)

## Use Numeric Keypad In A Program

You also can activate and deactivate the numeric keypad from a program, in anticipation of numeric or nonnumeric input, by POKEing location 50216 with 255 or 0 respectively. The user can always override this with CTRL-N. (CTRL-N is never passed to the program, but serves only the toggle function.) Just don't POKE any value other than 0 or 255, as that would prevent you from toggling with CTRL-N.

Here comes the new generation of SM's

# GOLDEN TOOL

program series for the 64.

ONLY \$75

## SM TEXT 64

The professional wordprocessor with more than 80 functions like multi-color selection, up to 120 columns/line without additional hardware, find & replace, enhanced blockhandling, direct-access to SM-ADREVA-files, and all the other usual features.

Here comes the new generation of SM's

# GOLDEN TOOL

program series for the 64.

## SM ADREVA 64

Your personal professional address-file-system. Up to 620 addresses per disc in direct access. Including 5 extra lines for individual text/record. Totally menu-driven. Powerful editing and back-up facilities. Several hardcopy features.

ONLY \$60

PLACE YOUR CHECK OR MONEY ORDER NOW!

SM SOFTWARE INC. 252 Bethlehem Pike Colmar, PA 18915

If you prefer that the keypad start out activated, change the next-to-last DATA item in line 520 from 0 to 255.

## Redefining The Keys

To redefine the 64 keys, we transfer the Kernal from ROM into RAM, change it to intercept the M, J, K, L, U, I, and O keys, and convert the data to the appropriate numbers.

Lines 3 and 4 POKE the machine language into an unused area of memory from the DATA statements in lines 500-560.

Lines 10 and 20 transfer the BASIC interpreter and the Kernal from ROM to RAM with the same addresses, so we can modify them. The *Commodore 64 Programmer's Reference Guide*, page 261, states that turning off bit 1 in location 1 switches only the Kernal addresses to RAM; actually it affects both the Kernal and BASIC address ranges.

Line 25 merely signals that the transfer is complete (it takes about a minute).

## The Intercept Routine

Line 30 sets up the routine which intercepts keyboard characters. It is put at the end of the routine that pulls a character from the keyboard buffer.

Finally, line 40 activates the modified Kernal

by turning off bit 1 of location 1 (changing the value in location 1 from 55 to 53). Once this is done, the change has been made, and pressing CTRL-N toggles between a numeric keypad and the normal usage of the M, J, K, L, U, I, and O keys.

## A Color Memory Bonus

A couple of bonuses have been included in lines 31 and 32. Line 31 changes the portion of the Kernal on newer 64s that puts the background color into the color memory for screen locations being cleared. Instead of putting the background color there, it will now put 1 (for white), so that if addresses 1024 to 2023 (decimal) are POKEd, a character will appear. (See "Commodore 64 Video Update," COMPUTE!'s GAZETTE, July 1983, page 44.)

POKEing 1000 locations as suggested there takes a few seconds—not something to do for every PRINT of a screen clear.

## Choose A Color

In the normal mode, printed characters will be light blue on a dark blue background, while POKEd characters will be white. Change the POKE to location 58587 in line 31 to some other number if you would like a color different from white for POKEd screen characters. Of course, if you have an older 64 which does not clear color

Here comes the new generation of SM's

# Quick Fix For Color RAM

## A Fast And Easy Way To Avoid 'Invisible Characters' On The Commodore 64

David Gross

A previous article, "Commodore 64 Video Update" (July 1983), discussed an internal change by Commodore to the 64's operating system. Late-model 64s do not automatically fill color memory with white, so characters POKEd directly into screen memory merge with the background color and are "invisible." This article presents a quick, simple solution.

"Commodore 64 Video Update" in the premier issue of COMPUTE!'s GAZETTE mentions that, when the screen is cleared, late-model Commodore 64s fill color memory with the screen background color. This renders all characters that are POKEd (not PRINTed) onto the screen "invisible," because they are the same color as the screen. Early-model 64s filled color memory with a contrasting color (white) when the screen was cleared.

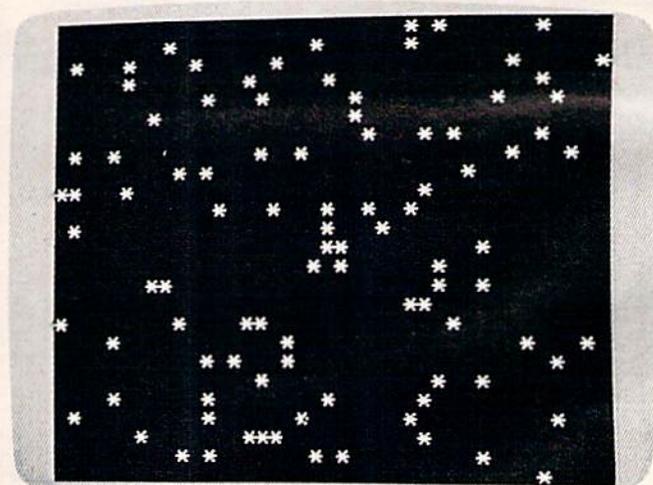

The earlier article suggested an easy one-line programming solution: a FOR-NEXT loop to POKE the appropriate color code (such as 1 for white) into color memory. The line looks like this:

```
FOR X=1 TO 1000: POKE 55295 + X,1: NEXT
```

It works fine, but takes about ten seconds to execute. Luckily, there is an even easier and much faster way.

### Let The 64 Fill Color RAM

First, simply set the screen to the color you want the characters to be by POKEing the color code

*This starfield, POKEd directly into screen memory, will appear on both older- and late-model 64s because of a quick-fill method for color memory.*

into memory address 53281. Next, print a CLR/HOME character or CHR\$(147). Last, reset the screen to the background color you want. *Do not clear the screen a second time!* Color memory will be set to give POKEd characters the *first* screen color that you used. That's because whenever you clear the screen, the new 64s automatically fill color memory with the color code found at 53281.

For example, suppose that you want to create a random starfield, white on black. The answer is the program below. It places 100 white stars at

# A new concept in interactive visual learning.

# CodePro-64™

Now you can learn to code in BASIC and develop advanced programming skills with graphics, sprites and music—*visually*. You learn by interacting with CodePro-64, a new concept in interactive visual learning.

## SEE PROGRAM EXECUTION

Imagine actually seeing BASIC statements execute. CodePro-64 guides you through structured examples of BASIC program segments. You enter the requested data or let CodePro-64 do the typing for you. (It will not let you make a mistake.)

You step through and actually see the execution of sample program statements by simply pressing the space bar. CodePro-64 does the rest. You see statements with corresponding *graphics* and variable value displays.

## EXTENSIVE TUTORIAL

CodePro-64's extensive tutorial guides you through each BASIC command, program statement, and function. You get clear explanations. Where appropriate, you invoke BasicView to see examples execute and watch their flow charts and variables change.

By seeing graphic displays of program segment execution you learn by visual example. You learn faster and grasp programming concepts easier with CodePro-64 because you immediately see the results of your input.

You control your learning. You can go through the tutorial sequentially, or return to the main menu and select different topics, or use keywords to select language elements to study. You can page back and forth between screens within a topic at the touch of a function key.

Once you have practiced and mastered the BASIC language elements you move on to

more advanced concepts. You learn about sprite and music programming.

## SPRITE GENERATOR & DEMONSTRATOR

CodePro-64's sprite generator lets you define your own sprites on the screen. You learn how to define sprites and what data values correspond to your sprite definitions. (You can then save your sprite data to a diskette file for use in your own programs.) You can easily experiment with different definitions and make changes to immediately see the effects.

We also help you learn to program with sprites by giving you a *sprite demonstrator* so you can see the effect of changing register values. You can experiment by moving your sprite around in a screen segment, change its color and see the effects of your changes. You learn by visual examples.

## MUSIC GENERATOR & DEMONSTRATOR

Our Music Generator and Music Demonstrator will provide hours of instruction and creative enjoyment. From the beginning of your instruction you can compose simple tunes on the screen using the generator. Once you've completed a composition you can save the tune and its associated SID parameters to a diskette file. Our music sam-

ple program can be used alone or incorporated into your own programs to read the saved music file and replay your songs.

Our music demonstrator lets you experiment with various combinations of music programming parameters and hear the results. All you do is enter rows of SID parameters on the screen to create a particular sound. Then you hear each sound by playing the "keyboard organ" in real time as you shift from row to row of SID parameters. By seeing your input and hearing the result you quickly learn how to create new musical sounds and special sound effects.

Whether you're a beginning programmer or an experienced professional, CodePro-64 will help you improve your Commodore 64 programming skills. We're sure because CodePro-64 was developed by a team of two professionals with over 25 years of software development experience.

CodePro-64 is a professional quality educational program for the serious student of personal computing. And it's fully guaranteed. Order yours today.

## HOW TO ORDER

Order your copy of CodePro-64 today by mail or phone. Send only \$59.95 plus \$3.00 shipping and handling to:

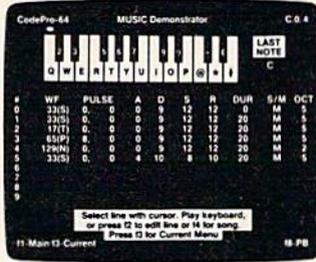

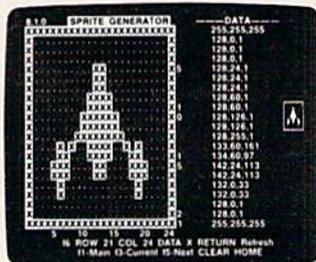

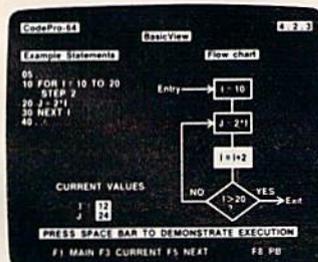

**SYSTEMS MANAGEMENT ASSOCIATES**  
3700 Computer Drive, Dept. G-1  
Raleigh, N.C. 27609

Available on diskette only. MasterCard/VISA accepted. For faster service on credit card orders, call toll free 1-800-SMA-RUSH. (1-800-762-7874). Dealer inquiries invited.

Commodore 64 is a trademark of Commodore Business Machines, Inc.

## OUR GUARANTEE

We guarantee your satisfaction. You must be satisfied with CodePro-64 for the Commodore-64. Try it for 10 days and if for any reason you are not satisfied return it to us (undamaged) for a full refund. No risk.

random locations on a black screen. The program runs in half the time it would take if each star's corresponding color memory location were set individually.

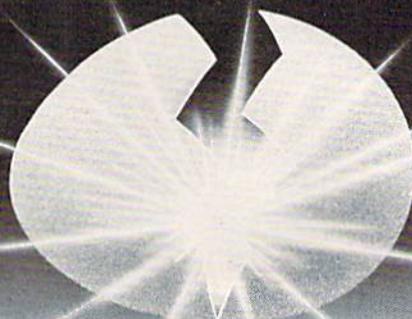

This technique can be very useful when converting Commodore PET programs that POKE to the screen. Simply change the screen memory addresses to fit the 64. Then, before any CLR/HOME is printed in the program, add a command to set the screen to the desired character color. Remember to set it back to the screen color immediately after the CLR/HOME is printed each time.

DISK VERSION ONLY — CBM 64  
A HI-RES GRAPHIC ADVENTURE

Here is the most extensive hi-res adventure game ever developed and created for the Commodore 64. It encompasses both sides of the disk and includes full color hi-res pictures. The story begins in the Kingdom of Acritym.

For numerous years the Kingdom of Acritym has been ruled by Lord Cybal. A rebel group has formed in an attempt to overthrow his majesty's Acritym's government. The rebellion has left the majority of Acritym's people exhausted, famished and defenseless. Despite the small size of the group, they have a major advantage. They are very well organized. Because of this they have developed a sturdy network of

guerrilla tactics that have diminished the Kings army. If the rebellion and the organization can be thwarted the rebel force will be eliminated. His Majesty is presently in hiding. YOUR MISSION - You have been hired as a mercenary of your land. You must locate the rebel meeting place. The journey will long and hard. Others before you have fought valiantly, as you shall, only to meet their death inside the walls of Acritym.

Its all part of the most complex intricate and huge adventure ever created for the Commodore 64. GOOD LUCK! Keyboard Control.

YOU ARE THE ONLY ONE LEFT TO HELP - PLEASE SAVE US

## SmartVoice™

NEW

A breakthrough in voice technology for the  
Vic 20 and Commodore 64 computers. This  
unit is not just another voice synthesizer.  
The quality is fantastic and it requires no  
peeks, no pokes, no phonemes, no interface  
cables, no power cords, no text editors or  
programs of any kind, and installs in just 2  
seconds. Say anything you like with simple  
print statements, such as:

**PRINT #2. "MY NAME IS SMARTVOICE"**  
That is all there is to it. You can talk fast or  
slow, use 63 pitch levels, create sound  
effects, sing songs, use automatic inflection  
and monotone modes, control volume by  
program or external knob, and more. A  
detailed user manual with demonstration  
programs included. Models for other  
computers also available.

Darby, MT 59829  
(406) 821-4596

COMPUTE!'s GAZETTE welcomes announcements of new products for VIC-20 and Commodore 64 computers, especially products aimed at beginning to intermediate users. Please send press releases and photos well in advance to: Tony Roberts, Assistant Managing Editor, COMPUTE!'s GAZETTE, P.O. Box 5406, Greensboro, NC 27403.

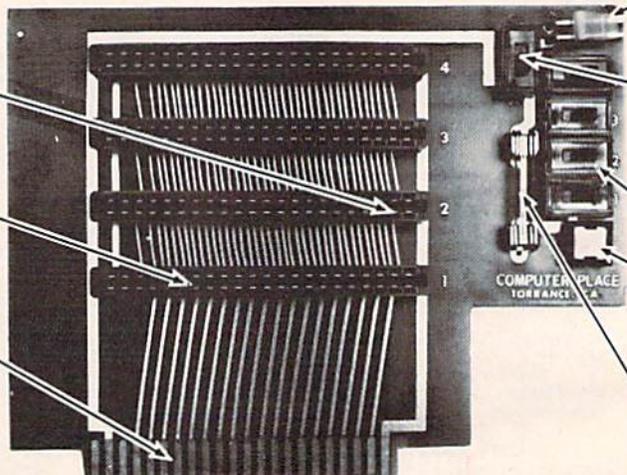

New product releases are selected from submissions for reasons of timeliness, available space, and general interest to our readers. We regret that we are unable to select all new product submissions for publication. Readers should be aware that we present here some edited version of material submitted by vendors and are unable to vouch for its accuracy at time of publication. ©

# VIC-20 Friendly

Each connector is positively keyed to assure correct plug-ins.

Four slots of high quality connectors for full memory expansion and utility cartridges.

Gold plated contact fingers for solid and long-lasting connection.

External power supply hook-up provision lets you run the VIC without overheating.

Two-way power source switch for easy selection of power from outside or the VIC.

Four convenient ON-OFF switches for individual control of the four slots.

Reset button lets you restart the VIC without turning off the computer.

Fuse block for overload and short protection.

The CP VIC-20 Expander is the one you have been waiting for. It incorporates all the features you've ever asked for. The CP VIC-20 Expander enhances your VIC-20 computer system by fully expanding the VIC-20 memory, plugging in cartridges for programming utilities, language extension, and many, many more various applications for your VIC-20 at only \$44.95.

Dealer inquiries welcome.

\*TERMS OF OFFER: If you find a price for any software or peripheral in this issue that is lower than our advertised price, we'll guarantee to beat it! Valid only on product in similar in-stock conditions. Valid only on prices appearing in print in this issue.

ORDERING & TERMS: Send cashier check, money order; personal/company checks allow 3 weeks bank clearance. VISA/MasterCard accepted. Provide phone number with order. SHIPPING: Software add \$4.00 for first piece, add \$1.00 each additional piece. Hardware add 3% or \$10.00 whichever is greater. Returns must have authorization number (call 602-955-3857 for authorization number). All returned merchandise subject to restocking fee and must come with all original packaging. No returns allowed after 30 days from shipping date. Prices are for cash; VISA and MasterCard add 3%. Prices subject to change without notice. All products subject to availability from manufacturers and/or suppliers. All prices in U.S. dollars. We sell mail order only. C.O.D. orders accepted.

# Bug-Swatter: Modifications And Corrections

• "Budget Planner" (December 1983) uses a Commodore Datasette to store data. The following modifications will allow you to use the program with a disk drive:

450 OPEN 1,8,0,F\$ :rem 82  
4050 OPEN 1,8,1,"@0:"+F\$ :rem 156  
7120 OPEN 1,8,0,F\$ :rem 131

• The Commodore 64 version of "Tetracystals" (January) contains a slight error on line 13. To correct it, insert RN between G and BLU. C7\$ should be

"BLKWHTREDCYNPURGRNBLUYEL"

• The printer used to generate program listings has burped another pesky question mark. Line 120 of the VIC version of MLX (January and February) is the latest victim. Correct it by removing the ? between RIGHT and OFF.

• Readers who typed in the 64 version of "Canyon Cruiser" (January) may have encountered an ?ILLEGAL QUANTITY ERROR in line 1420 because it is not possible to POKE a number higher than 255 into a memory location. Change line 1420 to

POKE53287, (PEEK(53287) + 1)AND255

• "SpeedScript" (January) works as listed, but there are some inconsistencies in the accompanying article. The cursor keys were incorrectly labeled on Figure 1: Keyboard Map, page 48. CRSR Left and CRSR Right will move the cursor left and right. CRSR Up moves to the previous sentence; CRSR Down moves to the next sentence. Table 1, page 52, is missing CTRL-= which returns the amount of free memory. Table 2 is missing the command for line spacing. SpeedScript defaults to double-spacing; if you want single-spaced documents, use CTRL-(English Pound)-S, followed by the number one (1).

Some readers, in trying to enter SpeedScript, discovered an ?UNDEF'D STATEMENT error in line 550 of MLX. If you don't use the POKES listed on page 39, MLX and SpeedScript will both try to use the same area of memory. The POKES fence off a section of BASIC for use by SpeedScript. It is necessary to follow the directions on page 39 before you LOAD MLX.

Also, next month look for "SpeedScript Revisited" in which Charles Brannon will answer a variety of questions from readers. ☺

## Free Program

SUNSOFT's™ 1541 Disk Backup program copies almost any disk. It's FREE when you buy any disk program from our free catalog, now featuring **Disk Doctor v3.0**, a collection of programmers' aids to help you do such things as auto-run, unscrub, auto-number, re-number, append, merge and screen dump. Also enables you to convert blocks of memory into DATA statements, and helps you with binary and hex math/conversions. MUCH. MUCH. MORE! **Disk Doctor v3.0** for 64 only, disk only—\$24.95. ## C-64 SOFTWARE AT LOW PRICES

### POWER PLUS

A utility program that adds over 40 commands to your C-64. Doesn't use any BASIC memory. 100% machine language.

#### FEATURES:

- Un-new—get back BASIC programs after reset
- Screen Dump—to printer
- Easy, abbreviated Disk Commands
- Machine Language Monitor with Assembler/Disassembler
- Transfer, Fill, Hunt, etc.
- Adds BASIC commands
  - Find
  - Renum
  - Auto line numbers
  - Excellent manual

**\$19.99**

Indicate tape or disk. Send check or m.o. (include \$2.00 p/h) to: **Educomp**  
2139 Newcastle Ave. • Cardiff, CA 92007  
(619) 942-3838

SATISFACTION GUARANTEED

### QUICKWRITER II

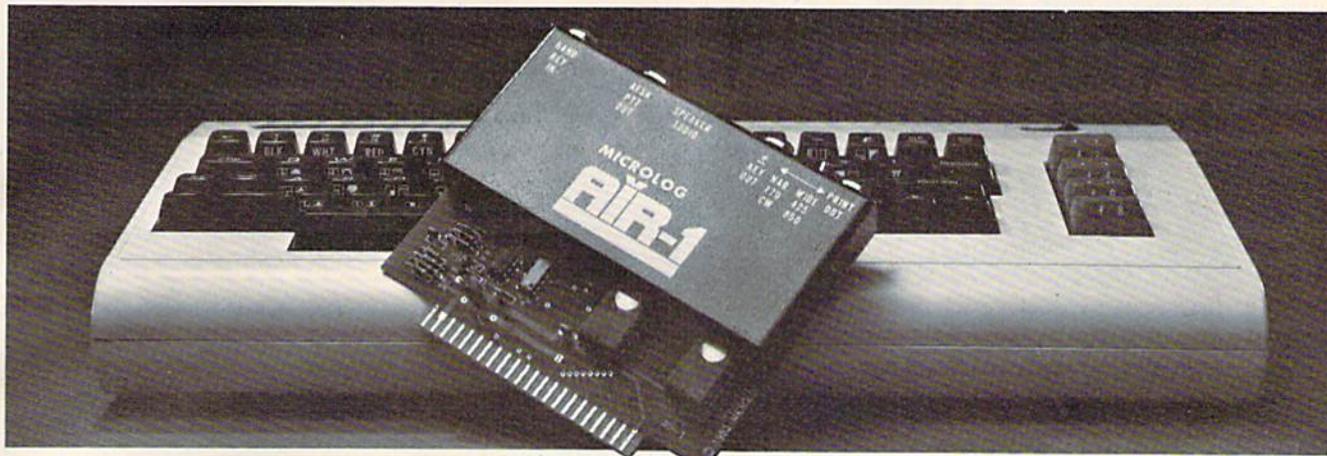

A full-featured word processor at a fraction of the cost. More powerful than all w/p under \$50.00. Has features even \$100.00 w/p don't have.

#### FEATURES

- 100% machine code, the fastest w/p we've seen
- Works with all printers/interfaces
- Semi-automatic hyphenation
- Justification
- Form letters automatically
- Block Transfer, Delete, Insert, Append.
- Auto page numbers, headers and footers
- Send disk commands
- PRE-VIEW—see left or right side of page before printing
- Full-screen editing with rapid scroll
- Easily send special printer commands
- Excellent manual

**\$29.99**

# Make Your Commodore Radio Active

The MICROLOG AIR-1 cartridge will turn your VIC-20 or C-64 into a complete Radio Teletype and Morse code terminal. Connect a shortwave radio and you'll be watching text readout from weather stations, news services, ships and HAM radio operators all over the world. A whole new use for your home computer. The AIR-1 contains both program in ROM and radio interface circuit to copy Morse code and all speeds and shifts of radio teletype. Plus the on screen tuning indicators mean you never have to take your eyes off the video for perfect tuning.

For Ham radio use, the Air-1 will also send and receive RTTY/CW with AFSK/PTT & ± CW keying outputs.

The AIR-1 will even tell you what Morse speed you're copying and provide built-in send/receive code practice!

With keyword or manual printer control for permanent paper copy, you won't miss a single bit of the action.

If you've been looking for something to spice-up your computing, try the ultimate "peripheral" and connect your computer to the AIR-1.

The complete AIR-1 for the VIC-20 or "64" is \$199. (With 4 mode AMTOR, \$279.) See it at your local dealer or call Microlog Corporation, 18713 Mooney Drive, Gaithersburg, Maryland 20879.

TEL: (301) 258-8400. Telex: 908153.

## MICROLOG

INNOVATORS IN DIGITAL COMMUNICATION

### COLOR PROBLEMS? One of Our Four New Products will Solve Them!

You're not alone. Thousands of Commodore 64 owners have "fuzzy" color on their TV. Most have interference lines crowding out their great graphics. Many have bought expensive monitors or new TVs, and often even that hasn't helped. But, most of us just lived with the problem. Now the engineers at Bytes & Pieces have four simple, inexpensive solutions.

If you have an "old 64" (with the 5 pin Monitor Din Plug), you've probably had color, resolution and interference problems. We can solve them!

- 1. The Interference Stopper**... A new kit that installs in minutes with two simple solder connections. Best results when combined with #2, 3, or 4 below. Absolutely stops 90% of the RF interference on your screen.

**\$15.95**

- 2. The Color Sharpener**... Use if your "old 64" is hooked up to a TV. Just plug into the monitor plug, and the color and contrast immediately improve. Dramatically. Crisp letters. Great graphics.

**\$18.95**

- 3. The NEW Color Sharpener CABLE**... Use if your "old 64" is hooked up to a monitor. A new 2 prong cable, with the Color Sharpener built in. All the benefits of #2, on your monitor.

**\$24.95**

- 4. The Monitor "Improver"**... If you have a Commodore 1701 monitor, this cable (3 prong) gives you a picture you won't believe. Better than the cable Commodore built... by a lot. Try it, you won't be disappointed. (Also hooks your "Old 64" to the 1702.)

**\$24.95**

- 5. The Reset Switch**... Here it is, a Reset Switch for Vic or Commodore. Get back into control of a "Hung-Up" program. Resets all pointers. Easy two solder connection installation. Every computer should have one.

**\$9.95**

If any of our products do not work to your satisfaction, send it back and we'll refund your purchase price in full.

### DUST PROBLEMS?

**Solve Them with Matching Dust Covers for Computer, Tape and Disk. \$7.95—\$9.95**

These are the deluxe covers for either the Commodore 64 or the Vic 20 made of brown leather grain Naugahyde, specially lined with a soft non-scratch liner, for a cover you just can't beat.

Don't waste your money on those cheap looking, clear plastic, static filled covers. Get the quality ones, custom fitted to your Commodore computers.

Available singly or as a matched set in beautiful brown simulated leather.

Commodore 64 and Vic 20 are registered trademarks of Commodore Computer Company.

## SUPER FORTH 64™ TOTAL CONTROL OVER YOUR COMMODORE-64™ with almost ENGLISH LANGUAGE PROGRAMMING EASE!

- Home Use, Fast Games, Graphics, Data Acquisition, Business
- Process Control, Communications, Robotics, Scientific

A Superset of MVPFORTH + Ext. for the beginner or professional

- 20 x faster than Basic.
- 1/3 x the programming time.
- Easy full control of all sound, hi res. graphics, color, sprite, plotting line & circle, using Forth Words.
- Forth virtual memory
- Full cursor Screen Editor & Trace.
- "APPLICATION" for application program distribution without licensing.
- FORTH equivalent Kernel Routines.
- Conditional Macro Assembler.
- More Compact than assembly code.
- Meets all fig. 79 standards.
- Source screens provided.
- Compatible with the book "Starting Forth" by Leo Brodie.
- Direct control over all I/O ports RS232, IEEE, including memory & interrupts.
- Access all C-64 peripherals including 4040 drive.
- Single disk drive copy utility.
- Disk & Cassette based. Disk Included.
- Full disk usage—683 Sectors.
- Supports both commodore sequential files and Forth Virtual disk.
- Forth words for accessing the 12K High RAM.
- Vectored kernel words.
- DECOMPILER facility.
- Full String Handling.
- ASCII error messages.
- FLOATING POINT, SIN/COS & SQRT routines.
- Conversational user defined Commands.
- Tutorial examples provided, in extensive manual.
- INTERRUPT routines provide easy control of split screen display, hardware timers, alarms and devices.
- A SUPERIOR PRODUCT in every way!

# A Beginner's Guide To Typing In Programs

## What Is A Program?

A computer cannot perform any task by itself. Like a car without gas, a computer has *potential*, but without a program, it isn't going anywhere. Most of the programs published in COMPUTE!'s GAZETTE for Commodore are written in a computer language called BASIC. BASIC is easy to learn and is built into all VIC-20s and Commodore 64s.

## BASIC Programs

Each month, COMPUTE!'s GAZETTE for Commodore publishes programs for both the VIC and 64. To start out, type in only programs written for your machine, e.g., "VIC Version" if you have a VIC-20. Later, when you gain experience with your computer's BASIC, you can try typing in and converting certain programs from another computer to yours.

Computers can be picky. Unlike the English language, which is full of ambiguities, BASIC usually has only one "right way" of stating something. Every letter, character, or number is significant. A common mistake is substituting a letter such as O for the numeral 0, a lowercase l for the numeral 1, or an uppercase B for the numeral 8. Also, you must enter all punctuation such as colons and commas just as they appear in the magazine. Spacing can be important. To be safe, type in the listings *exactly* as they appear.

## Braces And Special Characters

The exception to this typing rule is when you see the braces, such as "{DOWN}". Anything within a set of braces is a special character or characters that cannot easily be listed on a printer. When you come across such a special statement, refer to "How To Type In COMPUTE!'s GAZETTE Programs."

## About DATA Statements

Some programs contain a section or sections of DATA statements. These lines provide information needed by the program. Some DATA statements contain actual programs (called machine language); others contain graphics codes. These lines are especially sensitive to errors.

If a single number in any one DATA statement is mistyped, your machine could "lock up," or "crash." The keyboard and STOP key may seem "dead," and the screen may go blank. Don't panic - no damage is done. To regain control, you have

to turn off your computer, then turn it back on. This will erase whatever program was in memory, so *always SAVE a copy of your program before you RUN it*. If your computer crashes, you can LOAD the program and look for your mistake.

Sometimes a mistyped DATA statement will cause an error message when the program is RUN. The error message may refer to the program line that READs the data. *The error is still in the DATA statements, though.*

## Get To Know Your Machine

You should familiarize yourself with your computer before attempting to type in a program. Learn the statements you use to store and retrieve programs from tape or disk. You'll want to save a copy of your program, so that you won't have to type it in every time you want to use it. Learn to use your machine's editing functions. How do you change a line if you made a mistake? You can always retype the line, but you at least need to know how to backspace. Do you know how to enter inverse video, lowercase, and control characters? It's all explained in your computer's manuals.

## A Quick Review

1. Type in the program a line at a time, in order. Press RETURN at the end of each line. Use backspace or the back arrow to correct mistakes.
2. Check the line you've typed against the line in the magazine. You can check the entire program again if you get an error when you RUN the program.
3. Make sure you've entered statements in braces as the appropriate control key (see "How To Type COMPUTE!'s GAZETTE Programs" elsewhere in the magazine).

*We regret that we are not able to respond to individual inquiries about programs, products, or services appearing in COMPUTE!'s GAZETTE for Commodore due to increasing publication activity. On those infrequent occasions when a published program contains a typo, the correction will appear in the magazine, usually within eight weeks. If you have specific questions about items or programs which you've seen in COMPUTE!'s GAZETTE for Commodore, please send them to Gazette Feedback, P.O. Box 5406, Greensboro, NC 27403.*

# How To Type In COMPUTE!'s GAZETTE Programs

Many of the programs which are listed in COMPUTE!'s GAZETTE contain special control characters (cursor control, color keys, inverse video, etc.). To make it easy to know exactly what to type when entering one of these programs into your computer, we have established the following listing conventions.

Generally, any VIC-20 or Commodore 64 program listings will contain words within braces which spell out any special characters: {DOWN} would mean to press the cursor down key. {5 SPACES} would mean to press the space bar five times.

To indicate that a key should be *shifted* (hold down the SHIFT key while pressing the other key), the key would be underlined in our listings. For example, S would mean to type the S key while holding the shift key. This would appear on your screen as a "heart" symbol. If you find an underlined key enclosed in braces (e.g., {10 N}), you should type the key as many times as indicated (in our example, you would enter ten shifted N's).

If a key is enclosed in special brackets, {k}, you should hold down the *Commodore key* while pressing the key inside the special brackets. (The Commodore key is the key in the lower left corner of the keyboard.) Again, if the key is preceded by a number, you should press the key as many times as necessary.

Rarely, you'll see a solitary letter of the alphabet enclosed in braces. These characters can be entered on the Commodore 64 by holding down

the CTRL key while typing the letter in the braces. For example, {A} would indicate that you should press CTRL-A. You should never have to enter such a character on the VIC-20, but if you do, you would have to leave the quote mode (press RETURN and cursor back up to the position where the control character should go), press CTRL-9 (RVS ON), the letter in braces, and then CTRL-0 (RVS OFF).

About the *quote mode*: You know that you can move the cursor around the screen with the CRSR keys. Sometimes a programmer will want to move the cursor under program control. That's why you see all the {LEFT}'s, {HOME}'s, and {BLU}'s in our programs. The only way the computer can tell the difference between direct and programmed cursor control is the quote mode.

Once you press the quote (the double quote, SHIFT-2), you are in the quote mode. If you type something and then try to change it by moving the cursor left, you'll only get a bunch of reverse-video lines. These are the symbols for cursor left. The only editing key that isn't programmable is the DEL key; you can still use DEL to back up and edit the line. Once you type another quote, you are out of quote mode.

You also go into quote mode when you IN-SerT spaces into a line. In any case, the easiest way to get out of quote mode is to just press RETURN. You'll then be out of quote mode and you can cursor up to the mistyped line and fix it.

Use the following table when entering cursor and color control keys:

When You Read:	Press:	See:	When You Read:	Press:	See:	When You Read:	Press:	See:
{CLR}	SHIFT CLR/HOME		{CYN}	CTRL 4		{7}	CTRL 7	
{HOME}	CLR/HOME		{PUR}	CTRL 5		{8}	CTRL 8	
{UP}	SHIFT ↑ CRSR ↓		{GRN}	CTRL 6		{F1}	SHIFT f1	
{DOWN}	↓ CRSR ↓		{BLU}	CTRL 7		{F2}	SHIFT f2	
{LEFT}	SHIFT ← CRSR →		{YEL}	CTRL 8		{F3}	SHIFT f3	
{RIGHT}	← CRSR →		{1}	CTRL 1		{F4}	SHIFT f4	
{RVS}	CTRL 9		{2}	CTRL 2		{F5}	SHIFT f5	
{OFF}	CTRL 0		{3}	CTRL 3		{F6}	SHIFT f6	
{BLK}	CTRL 1		{4}	CTRL 4		{F7}	SHIFT f7	
{WHT}	CTRL 2		{5}	CTRL 5		{F8}	SHIFT f8	
{RED}	CTRL 3		{6}	CTRL 6				

# The Automatic Proofreader

"The Automatic Proofreader" will help you type in program listings from COMPUTE!'s Gazette without typing mistakes. It is a short error-checking program that hides itself in memory. When activated, it lets you know immediately after typing a line from a program listing if you have made a mistake. Please read these instructions carefully before typing any programs in COMPUTE!'s Gazette.

## Preparing The Proofreader

1. Using the listing below, type in the Proofreader. The same program works on both the VIC-20 and Commodore 64. Be very careful when entering the DATA statements — don't type an l instead of a 1, an O instead of a 0, extra commas, etc.

2. SAVE the Proofreader on tape or disk at least twice before running it for the first time. This is very important because the Proofreader erases this part of itself when you first type RUN.

3. After the Proofreader is SAVED, type RUN. It will check itself for typing errors in the DATA statements and warn you if there's a mistake. Correct any errors and SAVE the corrected version. Keep a copy in a safe place — you'll need it again and again, every time you enter a program from COMPUTE!'s Gazette.

4. When a correct version of the Proofreader is RUN, it activates itself. You are now ready to enter a program listing. If you press RUN/STOP-RESTORE, the Proofreader is disabled. To reactivate it, just type the command SYS 886 and press RETURN.

## Using The Proofreader

All VIC and 64 listings in COMPUTE!'s Gazette now have a checksum number appended to the end of each line, for example ".rem 123". Don't enter this statement when typing in a program. It is just for your information. The rem makes the number harmless if someone does type it in. It will, however, use up memory if you enter it, and it will confuse the Proofreader, even if you entered the rest of the line correctly.

When you type in a line from a program listing and press RETURN, the Proofreader displays a number at the top of your screen. This checksum number must match the checksum number in the printed listing. If it doesn't, it means you typed the line differently than the way it is listed. Immediately recheck your typing. Remember, don't type the rem statement with the checksum number; it is published only so you can check it against the number which appears on your screen.

The Proofreader is not picky with spaces. It will not notice extra spaces or missing ones. This is for your convenience, since spacing is generally not important. But occasionally proper spacing is important, so be extra careful with spaces, since the Proofreader will catch practically everything else that can go wrong.

There's another thing to watch out for: if you enter the line by using abbreviations for commands, the checksum will not match up. But there is a way to make the Proofreader check it. After entering the line, LIST it. This eliminates the abbreviations. Then move the cursor up to the line and press RETURN. It should now match the checksum. You can check whole groups of lines this way.

## Special Tape SAVE Instructions

When you're done typing a listing, you must disable the Proofreader before SAVEing the program on tape. Disable COMPUTE!'s Gazette April 1984 139

the Proofreader by pressing RUN/STOP-RESTORE (hold down the RUN/STOP key and sharply hit the RESTORE key). This procedure is not necessary for disk SAVES, but you must disable the Proofreader this way before a tape SAVE.

SAVE to tape erases the Proofreader from memory, so you'll have to LOAD and RUN it again if you want to type another listing. SAVE to disk does not erase the Proofreader.

## Replace Original Proofreader

If you typed in the original version of the Proofreader (October 1983 issue), you should replace it with the improved version below. We added a POKE to the original version to protect it from being erased when you LOAD another program from tape. The POKE does protect the Proofreader, and the Proofreader itself was not affected. However, a quirk in the VIC-20's operating system means that programs typed in with the Proofreader and SAVED on tape cannot be LOADED properly later. If you LOAD a program SAVED while the Proofreader was in memory, you see ?LOAD ERROR. This applies only to VIC tape SAVES (disk SAVES work OK, and the quirk was fixed in the Commodore 64).

If you have a program typed in with the original Proofreader and SAVED on tape, follow this special LOAD procedure:

1. Turn the power off, then on.
2. LOAD the program from tape (disregard the ?LOAD ERROR).
3. Enter: POKE 45,PEEK(174):POKE 46,PEEK(175):CLR
4. ReSAVE the program to tape.

The program will LOAD fine in the future. We strongly recommend that you type in the new version of the Proofreader and discard the old one.

## ARE YOU TIRED OF PAYING HIGH SOFTWARE PRICES FOR YOUR 64? JOIN THE CLUB!

You receive 120 programs, on disk or tape, each year (10 per month) including business, education, and games each month. You also receive software discounts, free computer consultation, plus much more. All this for \$40 per year of \$60 for 2 years. Send check or money order to: The 64 Club, 1260 Oliver, Pacific Beach, CA 92109.

## STOP PLAYING GAMES

NEW Disk  
Commodore 64

- Calculate odds on HORSE RACES with ANY COMPUTER using BASIC.
- SCIENTIFICALLY DERIVED SYSTEM really works. TV Station WKY of Louisville, Kentucky used this system to predict the odds of the 1980 Kentucky Derby. See the Wall Street Journal (June 6, 1980) article on Horse-Handicapping. This system was written and used by computer experts and is now being made available to home computer owners. This method is based on storing data from a large number of races on a high speed, large scale computer. 23 factors taken from the "Daily Racing Form" were then analyzed by the computer to see how they influenced race results. From these 23 factors, ten were found to be the most vital in determining winners. NUMERICAL PROBABILITIES of each of these 10 factors were then computed and this forms the basis of this REVOLUTIONARY NEW PROGRAM.
- SIMPLE TO USE: Obtain "Daily Racing Form" the day before the races and answer the 10 questions about each horse. Run the program and your computer will print out the odds for all horses in each race. COMPUTER POWER gives you the advantage!
- YOU GET: 1) Program on cassette or disk.  
2) Listing of BASIC programs for use with any computer.  
3) Instructions on how to get the needed data from the "Daily Racing Form."  
4) Tips on using the odds generated by the program.  
5) Sample form to simplify entering data for each race.

### BEFORE TYPING...

Before typing in programs, please refer to "How To Type COMPUTE!'s Gazette Programs," "A Beginner's Guide To Typing In Programs," and "The Automatic Proofreader" that appear before the Program Listings.

# Checksums

## For Early GAZETTE Programs

In the January issue, we asked for reader response concerning checksums for early (July-October) GAZETTE programs. Response was great, so we've chosen some of the longer and most difficult-to-type programs.

If you've already typed in a program, you can use "Automatic Proofreader" to check each line of the program. Disk drive users can LOAD and RUN Automatic Proofreader, then LOAD the program to be checked. If you own a cassette drive, see the special loading instructions below.

When the program to be checked has been LOADED, type SYS 886 to start Automatic Proofreader. LIST the program and stop when it fills the screen (remember that CTRL will slow the listing and RUN/STOP will stop it). Position the cursor on the first program line and hit RETURN. The checksum number will appear in the upper left-hand corner. Press RETURN again and you will see the next number. When you reach the bottom of the screen, LIST the next section of the program.

If you're typing in one of the programs below for the first time, LOAD and RUN Automatic Proofreader. Then type in the original listing while comparing the checksums.

### Special Notations

There are a few symbols in the listings which should be noted. First, any letters appearing to the left of the line number represent the month (O for October, D for December, etc.) in which a necessary correction was made in "Bug-Swatter." We've not included minor modifications. The letter appears only if the contents of the line are different from the original listing. Refer to "Bug-Swatter" in the issue noted for the correction.

An asterisk (\*) following a line number indicates that there were too many characters per logical line; therefore, the checksum is meaningless. Remember, the VIC accepts no more than 88 characters per line, and the 64 no more than 80. In cases where you see the asterisk, you can split the line by creating a new line number. For ex-

ample, if line 350 is too long and the next line number is 360, simply create line 355 and type in a latter section of line 350. (After a colon is always a safe bet.) A better alternative is to type in the statement using keyword abbreviations (? for PRINT, P SHIFTEd O for POKE, etc.).

### For Tape Users

Because Automatic Proofreader is a machine language program that fits in the cassette buffer, it is erased when you load a program from tape. To get around this problem, follow these instructions:

1. LOAD and RUN Automatic Proofreader. This will put the machine language program into the cassette buffer.
2. Type the following lines in direct mode (without line numbers):

```
A$="PROOFREADER.T": B$="{10 SPACES}": FOR  
X = 1 TO 4: A$=A$+B$:NEXTX  
FORX= 886 TO 1018: A$ = A$ + CHR$(PEEK(X)  
) :NEXTX  
OPEN1,1,1,A$:CLOSE1
```

After you type the last line, you will be asked to press RECORD and PLAY. We recommend that you start at the beginning of a new tape.

You now have a new version of Automatic Proofreader. Turn your computer off and on, then LOAD the program you were working on. Put the cassette containing PROOFREADER.T into the tape drive and type:

```
OPEN1:CLOSE1
```

You can now get into Proofreader by typing SYS 886. To test this, PRINT PEEK (886) should return the number 173. If it does not, repeat the steps above, making sure that A\$ (PROOFREADER.T) contains 13 characters and that B\$ contains 10 spaces.

The new version of Automatic Proofreader will load itself into the cassette buffer whenever you type OPEN1: CLOSE1 and PROOFREADER.T is the next program on your tape. It will not disturb the contents of BASIC memory.

# July

# NEW FROM HCP! EXPANSION PRODUCTS FOR YOUR VIC - 20™

For You Who Care Enough To Use The Best

## 24K RAM

- Single board for all RAM expansion uses only one slot
- Low power consumption provides cool, reliable operation and extended product life
- Fully VIC-20 compatible
- Available in 8K, 16K, 24K configuration

**\$199.24**

## RS-232 CARD

- True RS-232 signal levels provide maximum compatibility with peripheral devices
- Duel output connectors make installation a snap
- Fully compatible with VIC-20 hardware and software

**\$49.32**

## MOTHER BOARD

- Adds 4 slots to the memory expansion port
- Includes 3K of RAM
- A socket for a 2764 EPROM Modular power supply to reduce the load on your VIC

**\$69.64**

ALL PRICES ARE FOB SANTA CLARA

## LAIR of the LIZARDMEN

In an abandoned corner of desert lie ancient, unsolved mysteries. Danger, death and forgotten treasure await you in

LAIR OF THE LIZARDMEN  
text adventure for C-64 or VIC-20  
(VIC requires 8k expansion)  
Specify disk or tape, VIC or 64

\$15.00 disk or tape. Add \$1 shipping.  
California residents add 6 1/2% tax.

WEREWOLF SOFTWARE  
109 Minna Street  
Suite 353  
San Francisco, CA 94105

### FREE GAME FOR YOUR COMMODORE 64

That's right! If you'll help cover shipping costs, KIDware will send you a free game along with our latest program brochure. The cassette-based game, FOUR-IN-A-ROW, lets 2 players compete at trying to line up four pieces on a playing grid. Its fun for the whole family!

KIDware specializes in KID-oriented software (Cassettes and Disks) for the Commodore 64. We offer a wide range of fun, educational programs for Kids 1 - 16 years of age, with emphasis in the younger years. Our prices are the lowest and our quality and service the best—you get same day shipping on all orders!

To receive your game tape and program brochure, send \$1.50 (for shipping) to KIDware. If you only want a brochure, simply write and ask.

## VIC-20

NEW

### VIC-20 INTERFACING BLUE BOOK

Did you know that your VIC can be used to control a 99c toy motor so effectively that it runs like a precision machine? Or that you can build an accurate digital thermometer using the VIC and four parts costing less than \$5?

These and other 28 interfacing projects selected for usefulness, ease of construction and low cost are detailed in the VIC-20 Interfacing Blue Book, a veritable gold mine of practical information on how to build a variety of interfaces for your computer.

Projects include: Connecting VIC to your stereo; Pickproof digital lock; Capacitance meter; Liquid level sensor; Telephone dialer; Voice output; 8K/16K RAM/ROM expansion; 128K RAM expansion; 8-bit precision D/A; 8-bit A/D converter; MX-80 interface and more.

Written by a college professor in a friendly and informative style, the Blue Book gives you theory of operation, schematics, program listings, parts list, construction hints and sources of materials for each one of the 30 projects.

If you want to get the most out of your VIC this book is a must. Cost is \$14.95 (less than 50¢ per project!). Price includes postage.

## CONVERSE WITH YOUR COMPUTER

AT LAST! A FULL IMPLEMENTATION of the original ELIZA program is now available to run on your Commodore 64!

Created at MIT in 1966, ELIZA has become the world's most celebrated artificial intelligence demonstration program. ELIZA is a non-directive psychotherapist who analyzes each statement as you type it and then responds with her own comment or question - and her remarks are often amazingly appropriate!

Designed to run on a large mainframe, ELIZA has never before been available to personal computer users except in greatly stripped down versions lacking the sophistication which made the original program so fascinating.

Now, our new Commodore 64 version possessing the FULL power and range of expression of the original is being offered at the introductory price of only \$25. And if you want to find out how she does it (or teach her to do more) we will include the complete SOURCE PROGRAM for only \$20 additional.

Order your copy of ELIZA today and you'll never again wonder how to respond when you hear someone say, "Okay, let's see what this computer of yours can actually do!"

ELIZA IS AVAILABLE IN THE FOLLOWING FORMATS:  
(Please specify Disk or Cassette)

1. Protected Version ..... \$25  
(Protected Version can be run but not listed or modified)
2. Un-protected Commodore 64 BASIC Source Version ..... \$45  
(Source Version can be listed and modified as well as run)

Both versions include a six page user manual.  
Please add \$2.00 shipping and handling to all orders  
(California residents please add 6% sales tax)

# Be Amazed!

## Telengard: How low can you go?

We've created a subterranean monster. Fifty stories low.

That's the number of levels in the TELENGARD dungeon.

Each labyrinthine level holds hundreds of dark chambers and tomb-like corridors for the mighty adventurer to explore. It goes without saying that a shifting collection of hideous monsters with unpredictable behavior patterns can make life in the TELENGARD maze quite interesting—and frequently quite short!

Using wits, magic and true grit, your character delves deeper and deeper into the depths of TELENGARD in this realtime fantasy role-playing game. Available on cassette for Commodore® 64, Atari® Home Computers (40K), TRS-80® Mods. 1/III (32K) and PET® 2001 (32K) for a ghoulish \$23.00. 48K diskettes for Apple® II, Atari®, Commodore® 64 and TRS-80® available also, for \$28.00.

### AND FOR THOSE WHO DON'T DIG UNDERGROUND GAMES . . .

There's **B-1 NUCLEAR BOMBER**, a nail-biting solitaire simulation of a manned B-1 on a mission over the Soviet Union. Your plane is equipped with six Phoenix Missiles, a one megaton warhead and orders to retaliate! Available for Commodore 64, Atari Home Computers (32K), TI99/4 & 4A (16K), VIC-20 (16K), Timex/Sinclair 1000 (16K), and TRS-80 Mods. 1/III (16K) are available for an explosive \$16.00. Diskette versions for Apple (48K), TRS-80 (32K), Atari (24K) and IBM (48K) just \$21.00.

**NUKEWAR:** Defend your country by massive espionage efforts, or by building jet fighter bombers, missiles, submarines and ABM's. Your cold and calculating computer will choose its own strategy! Cassette for Commodore 64, VIC-20 (16K), TRS-80 Mods. 1/III (16K) and Atari Home Computers just \$16.00.

**FOOTBALL STRATEGY:** Animated action on a scrolling field. A head-to-head challenge or solitaire as you select the best offensive or defensive plays in response to your opponent. Commodore 64, Atari Home Computers (32K) and TRS-80 Models 1/III/IV (16K) cassette for \$16.00. Atari (32K), IBM (64K) and TRS-80 Models 1/III/IV (32K) diskettes available at \$21.00.

**T.G.I.F.:** Thank Goodness It's Friday! Avalon Hill's new party game for one to four players recreating an often-not-so-typical week in the lives of the working class. Half the fun is just making it from Monday to Sunday. Commodore 64, Atari Home Computers (40K) cassette for a meager \$20.00. Atari diskette (48K) for \$25.00.

**AVAILABLE WHEREVER GOOD COMPUTER GAMES ARE SOLD** or call Toll-Free: 1 (800) 638-9292 for the name of a store near you. Ask for Operator C.

# INDISPENSABLE SOFTWARE

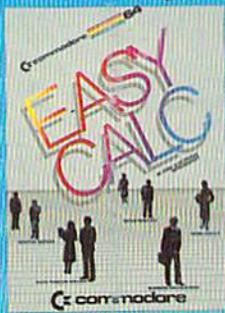

For Your Most Important Computing Needs

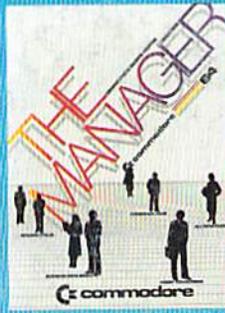

**EasyScript 64**  
Displays 764 lines x 240 characters. Prints to 130 columns. Works with EasySpell 64.

**EasySpell 64**  
20,000 word Master Dictionary and automatic spelling checker. Works with EasyScript 64.

**EasyCalc 64**  
Multiple electronic spreadsheet with color bar graph feature. 63 columns x 254 rows.

**The Manager**  
Sophisticated database system with 4 built-in applications, or design your own. Text, formulas, graphics.

**SuperExpander 64**  
21 special commands. Combine text with high resolution graphics. Music and game sounds.

**Easy Finance I—  
Loan Analysis**  
12 loan functions. Bar graph forecasting as well as calculation.

**Easy Finance II—  
Basic Investment Analysis**  
16 stock investment functions. Investment bar graph.

**Easy Finance III—  
Advanced Investment Analysis**  
16 capital investment functions. Bar graphs.

**Easy Finance IV—  
Business Management**  
21 business management features. Bar graphs.

**Easy Finance V—  
Statistics and Forecasting**  
Assess present/future sales trends with 9 statistics and forecasting functions.

**Accounts Payable/  
Checkwriting**  
11 functions. Automatic billing. 50 vendors/disk.

**Accounts Receivable/  
Billing**  
11 billing functions. Printed statements.

**General Ledger**  
8 general ledger options. Custom income statement, trial balances, reports.

**Inventory Management**  
1000 inventory items. Full reports.

**Payroll**  
24 different payroll functions. Integrated with G/L system.
