“Finally an easy-to-use program that really makes use of the great graphics capabilities of the Commodore 64.”—RUN

© 1984 by RUN. All rights reserved. Reprinted by permission.

“Doodle! is a good value with a wide range of features. It'll show you a lot about the graphics capabilities of your Commodore 64.”—RUN

“Doodle! is a very good buy and an exceptional program to work with. The manual is well-prepared and easy to follow. If you get lost or make errors, Doodle! is very forgiving.”

—RUN

“The samples included are truly breathtaking. Never before has the Commodore 64 looked so good! The reasonable price makes it one of the bargains of the year!”

—Software Shopper

“This is the finest art program for its price that I've tested.”

— St. Petersburg Times Software Reviews

UNLOCK YOUR CREATIVITY!

DOODLE! the most powerful, versatile graphics program ever created for a popular computer.

COMMODORE 64 COLOR SKETCH PAD
By Mark R. Rubin

DOODLE! the exciting graphic program acclaimed by thousands of Commodore 64 users!

DOODLE! turns your computer into a tool for unlimited design and artistic creativity! Regardless of your age or artistic skill, create anything you can imagine... from sketches to houseplans, to fine art, to business forms or letterheads that you can run off on your printer! Precise trackball or joystick operation, high-resolution graphics, program flexibility, and super ease of use add up to the friendliest, most versatile graphics program ever created for the Commodore 64.

DOODLE! will sketch, color, fill, zoom, line, box, circle, and more. Plus things no other software will do.

PRINT.

DOODLE! prints copies at the touch of a key. Print designs, charts, forms, text, anything! Works with most popular printers.

STAMP.

Create up to 9 of your own “rubber stamps” — great for plan drawing or graphic design!

OKIMATE compatible.

Print your DOODLE! in 16 colors with Okidata's new color printer.

LETTER.

DOODLE! lets you type in keyboard graphics, letters and numbers in any size and any direction!

SAVE.

Store your DOODLE! on disk for later recall or revisions.

COPY.

Duplicate, squeeze, rotate, reduce, enlarge, stretch, or reposition your DOODLE! (or any part of it) onscreen.

\$39⁹⁵ on disk

INTRODUCING

PAL 64

The fastest and easiest to use assembler for the Commodore 64.* Pal 64 enables the user to perform assembly language programming using the standard MOS mnemonics. **\$49.95***

POWER 64

Is an absolutely indispensable aid to the programmer using Commodore 64 BASIC. Power 64 turbo-charges resident BASIC with dozens of new super useful commands like MERGE, UNDO, TEST and DISK as well as all the old standbys such as RENUM and SEARCH & REPLACE. Includes MorePower 64. **\$49.95***

TOOL BOX 64

Is the ultimate programmer's utility package. Includes Pal 64 assembler and Power 64 BASIC soup-up kit all together in one fully integrated and economical package. **\$89.95***

SPELLPRO 64

Is an easy to use spelling checker with a standard dictionary expandable to 25,000 words. SpellPro 64 quickly adapts itself to your personal vocabulary and business jargon allowing you to add and delete words to/from the dictionary, edit documents to correct unrecognized words and output lists of unrecognized words to printer or screen. SpellPro 64 was designed to work with the WordPro Series and other wordprocessing programs using the WordPro file format. **\$49.95***

WORDPRO 64

This brand new offering from the originators of the WordPro Series brings professional wordprocessing to the Commodore 64 for the first time. Two years under development, WordPro 64 features 100% proportional printing capability as well as 160 column display, automatic word wrap, columnization, alternate paging for headers & footers, four way scrolling, extra text area and a brand new 'OOPS' buffer that magically brings back text deleted in error. All you ever dreamed of in a wordprocessor program, WordPro 64 sets a new high standard for the software industry to meet. **\$49.95***

MAILPRO 64

A new generation of data organizer and list manager, MailPro 64 is the easiest of all to learn and use. Handles up to 2,000 records on one disk, prints multiple labels across, does minor text editing ie. setting up invoices. Best of all, MailPro 64 resides entirely within memory so you don't have to constantly juggle disks like you must with other data base managers for the Commodore 64. **\$49.95***

RUN Goes On-Line!

RUN magazine has just entered the telecommunications arena with our own reader feedback bulletin board, the Running Board.

Now, if you have a modem, a Commodore computer and a terminal program, you can call our bulletin board any time, day or night, seven days a week, to get the most up-to-date information about the magazine, the Commodore industry and any other tidbits that we think might be useful to our readers.

We are starting out small, but hope to grow into a service unequalled by any other magazine. We will tell you about upcoming issues, current issues, updates the minute we get them, special projects we might be cooking up and information relevant to all Commodore computer owners.

In exchange for this information, we will be asking each caller a few questions. For example, which computers you own or plan to buy, which articles you like the best or least, what kinds of topics you want us to cover in the magazine, etc. In this way, you can talk back to RUN so that we can make the magazine what you want it to be. If the idea catches on, who knows how far we might take it?

Give us a call and find out what the Running Board is all about. The number is 603-924-7632. We use a standard protocol, 300 baud, one stop bit, no parity, full duplex and a word length of eight bits. Let us know what you think; we value your feedback.

GW

The New Commodore PC

With the announcement of its newest computer at the recent CES show in Las Vegas, Commodore has launched its first foray into the so-called personal computer market. The Commodore 128, with twice the memory of the popular C-64, promises more powerful and useful applications for the Commodore computerist.

ability to 512K and serious software available, this is a computer that could readily be used effectively in a business environment. Indeed, it offers so many excellent features that almost any computerist will find something to his liking about the C-128.

But perhaps the most attractive feature of the C-128 will be the price, which

At the show, consumer reaction to the C-128 was mixed. "I've got too much money tied up in my present system to change computers," noted one attendee wandering around the Commodore booth.

Others were more receptive to the new kid on the block and enthusiastically welcomed the C-128 when Commodore officials verified that it is compatible with the C-64 software programs. "Now I can give my C-64 to my son and buy the new computer for myself," said one excited parent.

3-in-1 Computer

With the introduction of the C-128, Commodore has unleashed its most versatile computer to date. It's almost like owning three computers in one.

First, there's the C-128 itself. Sporting the sleek design of an IBM PC, the C-128 features a full-sized keyboard with a numeric keypad, an enhanced Basic, a 40/80-column option, a built-in machine-language monitor and 128K that can be expanded to 512K with an external RAM disk option.

At the flick of a switch, you can turn your C-128 into a C-64. The memory capacity of the C-128 is halved, but your computer is now compatible with the entire line of C-64 peripherals and is capable of running C-64's games, graphics, music software and more.

The C-128 also features a CP/M mode, which opens up CP/M software availability to run such programs as WordStar, dBase II and the Perfect line of software.

Uses

The new machine is being touted as ideal for businessmen, students and home users. Of course, as you may recall, the C-64 was also billed as well-suited for home, business and educational use. But the C-128's claim is much more substantiated. With a 40/80-column color display, expand-

Commodore has not yet finalized, but which promises to be well under that of the nearest competitors—the Apple IIc and the IBM PCjr. If so, the C-128 will attract anyone who is thinking of upgrading his C-64 or who is looking for more serious computer applications than the C-64 affords.

The newly introduced peripherals, too, lend credence to the image of the 128 as a more serious computer. With a mouse; a faster, 350K disk drive; a monochrome monitor; an RGB color monitor; and 1660 and 1670 modems, as well as the recently announced daisywheel printer, the DPS-1101 (see January 1985 *RUN*, p. 80), the new C-128 owner will be well-equipped for business and telecommunications, as well as home and educational applications.

A Plucky Company

Firmly entrenched as the leader in the low-cost home computer market, Commodore is entering the higher-priced arena to tackle IBM and Apple for a share of the lucrative market that most analysts predict exists.

In the ad that first announced its new computer, Commodore takes Apple and IBM head on and lists capabilities of the C-128 not found in the Apple IIc and IBM PCjr. With its history of offering quality equipment at the lowest prices possible, Commodore states that the C-128 spells good news for the industry, but "bad news for IBM and Apple."

In describing the 128 as its first "personal computer," Commodore appears to be straddling both the home and business markets. It seem to be saying, "The C-128 is not strictly a home computer, nor is it strictly a business machine. But, with its added capabilities, it can handle more advanced applications than the C-64."

In future issues, *RUN* will be taking a closer look at the C-128 and charting its progress among both readers and support manufacturers. As always, reader input is most welcome.

PlayNET announces 19 exciting ways to bring people together.

Now there's a Home Computer Network that lets you communicate with all kinds of people—all over the country! Make new friends, play exciting games, barter—shop—trade, all from the comfort of your home.

The network operates 6PM–7AM every weeknight, and 24 hours on Saturday, Sunday and Holidays. All you need to access PlayNET™ is a COMMODORE 64,* DISK DRIVE and MODEM.

1 TALK.

By typing on-line you can *talk to anyone*, or everyone, on the system. Meet fascinating people and make new friends from coast to coast.

2 ELECTRONIC MAIL.

You can *send private messages* to people on the system, and the message will be waiting when they sign on!

3 BULLETIN BOARDS.

You can *post announcements*, or check the listings of other members. There are lots of boards for hobbies and special interests! If you don't find the one you're looking for—create your own!

4 FILE TRANSFER.

You can even *transfer non-commercial programs* to other members! There is a small extra fee for this service.

5-17 GAMES!

PlayNET lets you play exciting games with real people, not just a computer. All our games have *full color graphics*, and they're all *interactive!*

- Plus the added feature of being able to talk with your opponent while you play. Discuss strategy, comment on moves, even try and psych your opponent out!
- New games are added all the time, and there are tournaments for every skill level.

CURRENT GAMES INCLUDE:

- Backgammon
- Boxes
- Capture the Flag
- Checkers
- Chess
- Chinese Checkers
- Contract Bridge
- Four-In-A-Row
- Go
- Hangman
- Quad 64™
- Reversi
- Sea Strike™

18 MORE! MORE! MORE!

There's *on-line updating* of your PlayNET Software as games and services are added. You have access to PlayNET's *Shopping Center* and *Information Center*, and every month you'll get our *Newsletter*.

19 YOUR SATISFACTION IS GUARANTEED for 30 days

(or your full subscription price will be refunded upon receipt of the package).

This is all you pay:

- \$39.95 for the PlayNET Software Package (3 disks and a User Manual), Monthly Newsletter, and 90 MINUTES ON-LINE TIME FREE!
- \$6 monthly service charge.
- \$2 an hour on-line time (the \$2 includes the telecommunication charges). That's much less than a long distance phone call.

Here's how you can become a member!

It's easy to join, simply call PlayNET on the toll-free number, 1-800-PLAYNET, or send the coupon below and access all your Commodore 64 has to offer. The sooner you do, the sooner PlayNET can put the whole country at your fingertips!

PlayNET
The Network that has people talking

SEND TO PLAYNET, INC.
P.O. BOX 587
WYNANTSkill, N.Y. 12198

OR CALL 1-800-PLAYNET

YES! I WANT PlayNET TO PUT THE WHOLE COUNTRY AT MY FINGERTIPS. I UNDERSTAND THAT MY SATISFACTION IS GUARANTEED FOR 30 DAYS (or my full subscription price will be refunded upon return of the package) I may cancel my membership at any time by writing PlayNET.

Bill me on my charge card for \$39.95. (Plus sales tax for New York State residents). No checks, cash or money orders accepted. Please send me the PlayNET Software, User Manual, and 90 minutes of free on-line time.

Please print.

How to type listings from

RUN

Typing in listings can be difficult enough without having to worry about strange graphics characters, charts or tables. That's why we decided to make it easy to enter listings from *RUN* by translating everything we thought might be confusing in any program.

When you see something between the curly brackets, all you have to do is press the keys indicated. For example:

{SHIFT L}—means hold down the shift key and press the L key at the same time.

{COMD J}—means hold down the Commodore key (it is on the lower left side of the keyboard) and press the J key at the same time.

{SHIFT CLR}—hold down the shift key and press the CLR/HOME key.

{HOME}—press the CLR/HOME key without shifting.

{CTRL 6}—hold down the control key and press the 6 key.

{FUNCT 2}—function 2 (in this case, you hold down the shift key and press the function 1 key).

{CRSR UP}{CRSR DN}{CRSR LF}{CRSR RT}—these are the four cursor directions.

{UP ARROW}—means the arrow key (the one with the pi sign under it).

{LB.}—the British pound sign (£).

{PI}—the pi sign key (π); (shift and press the up arrow key).

In some instances, when a large number of characters or spaces are repeated in a listing, we will represent them this way: {22 spaces} or {17 CRSR LFs}.

Print vs Print#

RUN readers should be aware of difficulties that may arise when entering listings that contain the PRINT and PRINT# commands.

These two commands may look very similar, but they are different. If, for example, you use a question mark (?) to abbreviate PRINT in a line such as 10 PRINT#4,A\$, then you are signaling to the Commodore computer that you are trying to print the variable #4, which is not a legal variable name.

The command PRINT#4 actually means "print to file number 4." You can abbreviate PRINT# by hitting the P key and the shift and R keys at the same time and then entering the file number. But *do not* abbreviate PRINT# with a question mark.

If you think of PRINT as one command and PRINT# as an entirely different command, then you should have no problems.

Manuscripts: Contributions in the form of manuscripts with drawings and/or photographs are welcome and will be considered for possible publication. *RUN* assumes no responsibility for loss or damage to any material. Please enclose a self-addressed, stamped envelope with each submission. Payment for the use of any unsolicited material will be made upon acceptance. All contributions and editorial correspondence (typed and double-spaced, please) should be directed to *RUN* Editorial Offices, 80 Pine Street, Peterborough, NH 03458; telephone: 603-924-9471. **Advertising Inquiries** should be directed to Advertising Offices, CW Communications/Peterborough, Inc., Elm Street, Peterborough, NH 03458; telephone: 603-924-7138. **Subscription problems, placement orders, renewals or address changes:** Call 1-800-645-9559 or write to *RUN*, Subscription Department, PO Box 954, Farmingdale, NY 11737. **Problems with advertisers:** Send a description of the problem and your current address to: *RUN*, Elm Street, Peterborough, NH 03458, ATTN.: Rita B. Rivard, Customer Service Manager, or call 1-800-441-4403.

RUN is a member of the CW Communications/Inc. group, the world's largest publisher of computer-related information. The group publishes 52 computer publications in 19 major countries. Members of the group include: Argentina's *Computerworld/Argentina*; Asia's *The Asian Computerworld*; Australia's *Computerworld Australia*, *Australian Micro Computerworld*, *Australian PC World and Directories*; Brazil's *DataNews and MicroMundo*; China's *China Computerworld*; Denmark's *Computerworld/Danmark and MicroVerden*; Finland's *Mikro*; France's *Le Monde Informatique*, *Golden (Apple) and OPC (IBM)*; Germany's *Computerwoche*, *Microcomputerwelt*, *PC Welt*, *Software Markt*, *CW Edition/Seminar*, *Computer Business and Commodore Magazine*; Italy's *Computerworld Italia*; Japan's *Computerworld Japan* and *Perso ComWorld*; Mexico's *Computerworld/Mexico and CompuMundo*; Netherland's *CW Benelux and Micro/Info*; Norway's *Computerworld Norge and MikroData*; Saudi Arabia's *Saudi Computerworld*; Spain's *Computerworld/Espana and MicroSistemas*; Sweden's *ComputerSweden*, *MikroDatorn*, *Min Hemdator* and *Svenska PC World*; the UK's *Computer Management*, *Computer News* and *Computer Business Europe*; the U.S.'s *Computerworld*, *Hot CoCo*, *inCider*, *InfoWorld*, *MacWorld*, *Micro Marketworld*, *PC World*, *RUN*, *73 Magazine* and *80 Micro*.

Introducing the Most Powerful Business Software Ever!

FOR YOUR TRS-80 • IBM • APPLE • KAYPRO • **COMMODORE 64** • MSDOS OR CP/M COMPUTER*

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSARECEIVABLES™

\$99.95

VERSARECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

VERSAPAYABLES™

\$99.95

VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSAPAYROLL™

\$99.95

VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

VERSAINVENTORY™

\$99.95

VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSALEDGER II™

\$149.95

VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software.**

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II™ manual will help you become quickly familiar with VERSALEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module. All CP/M-based Computers must be equipped with Microsoft BASIC (MBASIC or BASIC-80).

To Order:

Write or call Toll-free (800) 431-2818
(N.Y.S. residents call 914-425-1535)

- add \$3 for shipping in UPS areas
- add \$4 for C.O.D. or non-UPS areas

MAGIC

Compiled by *LOUIS F. SANDER*

MAGIC is tricks, MAGIC is fun. MAGIC is doing what cannot be done.

Every month, Magic brings you brief and useful computer tricks from around the world—tricks to make computing easier, more enjoyable or more exciting. We number our tricks in hex, the counting system of sorcerers and computerists.

Magic solicits your simple hardware ideas, short programs, useful programming techniques, little-known computer facts and similar items of interest. We look for new or recycled material that can be implemented with a minimum of time, effort or theoretical knowledge and that is of current value to Commodore computerists (Plus/4 and C-16 owners, too). We pay up to \$50 for each original trick we print. Send your tricks to:

MAGIC
c/o Louis F. Sander
PO Box 101011
Pittsburgh, PA 15237

If you enclose a self-addressed stamped envelope, we'll send you a Trick Writer's Guide.

There's some great magic here for you this month, whether your interest is in disk drives, printers, programming, or just in typing in a program to see what it does. As always, we match our subject matter to the interest expressed in our mail, and, basically, that's a broad cross section of computing. We think of our contributors as the most creative souls in computerdom, and month after month they prove us right. Since our contributors and readers are one and the same, that puts you in very good company. Behold what your colleagues have wrought:

\$1A5 C-64 wedge feature—Commodore's famous wedge program contains a not-so-famous way of organizing files on the disk. When using the wedge to save, if you end your filename with a single character enclosed in square brackets, that character will magically be moved to the sixteenth position in the filename!

In wedge jargon, that sixteenth character is called the volume identifier. If you save several files with the same volume ID, the wedge will let you access them as a group.

If you're saving without the wedge, you can manually put a volume identifier in the sixteenth position of your filename, so you can use it later on.

To use the volume identifier, you must be running the wedge, and you can use any wedge command,

including @COPY, @RENAME, @SCRATCH and especially @\$. The wedge looks for the last character in each filename when you specify a volume ID between the square brackets. For example, you can save a file by entering:

```
{LEFT ARROW}HOUDINI[L]
```

It will list in the directory as

```
HOUDINI {8 spaces} L
```

and can be scratched with:

```
@S:HOUDINI[L] {return}
```

To get a directory of all files with volume identifier L, use:

```
@$:*[L] {return}
```

You can scratch all the files with volume identifier L by using

```
@S:*[L] {return}
```

Beware: The dark side of this magic is that the wedge will report the sixteenth character of the filename as the volume ID, whether it is intended as such or not. Make your IDs unique (graphics characters, for instance) and this should be no problem.

Matthew J. McCaffrey
Groton, CT

\$1A6 Comma files on disk—When experimenting with disk files, simple program errors often cause difficulties with filenames. Sometimes, a file named “,” pops up, which resists all efforts to be killed or renamed. When this happens, just search your directory for any other files with single-character names, then give them longer ones.

When the comma file is the only single-character name on the disk, it can be scratched or renamed by using the filename “?”. The wild-card character (the ?) will match the comma and allow you to do as you wish. After the comma file has been disposed of, you can give the others their original one-character names.

Fleet System 2.TM

Word processing that *spells* V-A-L-U-E.

Complete word processing with built-in 70,000 word spell checking - Only \$79.95

Up till now, you'd have to spend a minimum of about \$70 to get a good word processor for your Commodore 64TM. And if you added a small, *separate* spell checking program, you'd be out well over \$100!

Now there's Fleet System 2! It's two powerful programs in one, and it's perfect for book reports, term papers or full office use.

Fleet System 2 combines the EASIEST and most POWERFUL word processor available with a lightning-fast 70,000 word spelling dictionary — all in one refreshingly EASY TO USE integrated system. Finally, spell checking is now available at your fingertips.

You can even add over 15,000 "custom" words to the built-in 70,000 word dictionary. And at a suggested retail price of \$79.95, Fleet System 2 really spells V-A-L-U-E, and 70,000 other words too!

Fleet System 2 helps people of all ages to learn to *spell correctly* and *write better* too. It's the ONLY full featured word processor that provides you with helpful writing and vocabulary feedback such as: the total number of words in your document, the number of times each word appears, and total number of "unique" words, just to name a few.

Fleet System 2 has every important feature that will help you make child's play

out of the most heavy duty typing tasks. There's Built-in 80 Column Display — so what you see is what you get, Horizontal Scrolling During Typing, Easy Correction and Movement of Text, Page Numbering, Centering, Indenting, Headers and Footers, Math Functions, Search and Replace, Mail Merge, BUILT IN 70,000 word SPELL CHECKING and much, much more!

*Ask for Fleet System 2.
Exceptionally Easy. Packed
with Power. Perfectly
Priced.*

Circle 93 on Reader Service card.

\$1A7 Dry disk storage—High humidity can cause loading problems when the felt inside your disk becomes slightly damp. You can reduce the problem by storing your disks with a desiccant capsule, such as those packed with vitamin pills. If you don't use vitamins, ask your druggist to give you a desiccant capsule.

Judith C. Fiore
Cleveland Heights, OH

\$1A8 Controlling tape errors—If you're working on a program and save it to tape several times with the same name, you could be asking for trouble. When you try to load it, the computer might find an old cut-off version under the same name and give you a Load error. You can usually find the "lost" beginning of your program, but it will take you several attempts. A better solution is to use a different name each time you save a version of the program.

Julie Rhodes
Columbus, OH

\$1A9 Plus/4 screen Pokes—On the C-64, screen memory starts at 1024, and color memory starts at 55296. On the new Plus/4, screen memory starts at 3072, and color memory starts at 2048. When converting C-64 programs to work on the Plus/4, just add 2048 to C-64 screen Poke locations and subtract 53248 from the C-64 color Poke locations. For example, on the C-64,

```
POKE 1524,1 (letter 'A' in center screen)
POKE 55796,2 (makes it red)
```

would convert to this on the Plus/4:

```
POKE 3572,1 (3572 = 1524 + 2048)
POKE 2548,2 (2548 = 55796 - 53248)
```

The screen map for the C-64 is on page 382 of the *C-64 Programmer's Reference Guide*. The map for the Plus/4 is on page 199 of the user's manual that comes with the computer. (The Plus/4's luminance feature may make it necessary to also change the value Poked to color memory. Ed.)

Kenneth H. Hottes
Danbury, CT

\$1AA Plus/4 and C-16 tips—(Untested. Ed.) To disable the stop key, enter POKE 806,103. Return to normal by entering POKE 806,101. Unlike the 64, all keys repeat on the new machines. To emulate the 64, with only cursor keys, insert/delete and space repeating, enter POKE 1344,0. Return to flying text by entering POKE 1344,128.

Empty the keyboard buffer with POKE 239,0. Key-presses are detected at memory location 2038, much as they are in the C-64 and VIC in location 197. The values returned are generally the same as those for the 64 (see trick \$3E, in *RUN's* April 1984 issue, or run

the following program and press some keys).

```
10 GETKEY A$: PRINT A$
20 PRINT PEEK(2038) : GOTO 10
```

Wayne Arnett
Chandler, AZ

\$1AB RUNDY—Have you ever typed in RUN over READY? If you have, the computer probably printed the familiar Undef'd Statement error. But if your program starts with line number zero, it will run no matter what follows RUN on the screen.

Tim Brugman
Fullerton, CA

\$1AC Improved reverse characters—After typing CTRL 9, type in some words and look closely at them. The uppercase characters are not completely surrounded by reverse video, so they look cut off at the top. They will take on a more professional look if you put a row of COMD@ characters, CHR\$(164), just above the reverse characters needing the improvement.

Perfectly Clear
Honolulu, HI

\$1AD Centered printing—Trick \$7F in June's *RUN* can also be accomplished using a function instead of a subroutine. You can center A\$ on the screen as follows.

```
100 DEF FNC(X) = 20 - (LEN(A$)/2)
110 More program lines, if desired
120 Etc.
700 A$ = "PRESTIDIGITATION" : PRINT TAB(FNC(X));A$
710 A$ = "IS" : PRINT TAB(FNC(X));A$
720 A$ = "PLEASURABLE!" : PRINT TAB(FNC(X));A$
```

The X is a dummy argument, not used, but required to avoid a Syntax error. For the VIC, use 11 rather than 20 in line 100.

Carol A. Sowle
Fort Wayne, IN

\$1AE Magic flasher—This subroutine can make all or part of your screen prompt flash on and off. It adds a little class and pizzazz, with very little effort.

```
500 REM ** MAGIC FLASHER **
510 PRINT "PRESS RETURN {CTRL RVS OFF} TO
CONTINUE"
520 PRINT "{2 CRSR UP}" : IF PEEK(162)AND32 THEN PRINT
"{CTRL RVS}";
530 GET A$ : IF A$ = "" THEN 510
540 PRINT "{CTRL RVS OFF}" : RETURN
```

A Gosub 500 will put the prompt on the screen, with the first two words flashing. The rate of flash is set by Peeking a bit in the real time clock. For a faster rate, replace the 32 in line 520 with a 1, 2, 4, 8 or 16. For a slower rate, use 64 or 128. Moving the RVS OFF

Continued on p. 72.

Imagine...

**A WORD PROCESSING PROGRAM!
AN INFORMATION MANAGEMENT PROGRAM!
A TELECOMMUNICATIONS PROGRAM!**

ALL THREE PROGRAMS, ON ONE DISKETTE!, FOR ONLY \$49.95*!

"Quite simply the best! The highest rating possible... the package should be part of every (computer) library." — ANALOG COMPUTING

"Russ Wetmore has done an EXCELLENT job! The program is flexible, powerful and very easy to use. \$49.95 buys a heck of a lot of program." — REVIEW BY ARTHUR LEYENBERGER

"Performance: ★ ★ ★ ★ (Excellent) Value: ★ ★ ★ ★ (Excellent)

This three-in-one package is a bargain... one of the finest values on the market."

— FAMILY COMPUTING

HOMETEXT WORD PROCESSOR.
HOMEFIND INFORMATION MANAGER.
HOMETERM TELECOMMUNICATIONS

Together they are **HomePak**: the three most important and most useful home computer applications in one integrated system — on one diskette!

The reviewers are unanimous; any one of these programs alone is well worth the price. So you're getting **three times the computing power**, with this exceptionally easy to use package:

- all commands in simple English; no complex computer jargon, no obscure instructions
- all key commands are immediately available on the screen menu; additional commands can be called up for the more experienced user
- to help you, system status is displayed right on the screen

And it's easy to use the three programs together. For example, in the "Merge" mode, you can take data stored in **HOMEFIND** and print letters and labels using **HOMETEXT**. Or, use **HOMETEXT** to write reports based on information you've called up via **HOMETERM**.

Why settle for less when you can have Mo?

Introducing Mitey Mo, the ready-to-go modem that turns your Commodore 64® into a telecommunications giant.

Mitey Mo is the complete—and affordable—telecommunications system for your Commodore 64. It will open up a world of practical and exciting uses for your computer, and it will take you online faster and easier than anything else you can buy.

Now you'll be able to send and receive electronic mail, link up with community bulletin boards, play computer games with people in distant places, do electronic banking, and tap into library resources to find the material you need for your reports. All at your convenience.

Until Mitey Mo, Commodore's 1650 Automodem was the obvious choice when you went looking for a modem for the C-64. Like Mitey Mo, it has "auto-answer"—it receives data while unattended. And both modems are "auto dialers"—you dial right on the computer's keyboard. But that's about where their similarity ends.

Suppose you dial a number,

MODEM FEATURES	MITEY MO	COMMODORE AUTOMODEM
Auto Dial	YES	YES
Auto Answer	YES	YES
Auto Redial	YES	NO
Smart 64 Software Included	YES	NO
Upload/Download Capability	YES	NO
VT-52/VT-100 Emulation	YES	NO
Menu Driven	YES	NO
28K Software Buffer	YES	NO
Printing Capability	YES	NO
Easy-to-Use Manual	YES	NO
Bell 103 Compatible	YES	YES
Multiple Baud Rates	YES	YES
Cables Included	YES	YES
Single Switch Operation	YES	NO
Warranty	1 year	90 days

Some mighty interesting features—ours and theirs. Yours to decide.

and you find that it's busy. Mitey Mo has "auto redial"—it hangs up and redials immediately until it gets through. With the other modem you have to redial each time—and somebody with auto redialing can slip in ahead of you.

Mitey Mo is menu-driven. It lists the things you can do on the screen. Select a number and you're on your way. Since Automodem isn't menu-driven, you'll be hunting through the manual a lot.

Mitey Mo has only one switch, the customized software does the rest. Every family member will find it

easy to use. With the other modem you'll have to remember to check three switches, otherwise you may be answering when you mean to be originating.

Mitey Mo gives you access to 14 pages of memory (28,000 bytes), so you can store data and review or print it later. The other modem doesn't let you store or print anything.

Mitey Mo is half the size of the other modem. The very latest technology allows miniaturization and increased reliability, as well. Mitey Mo is so reliable, we gave it a full one-year warranty. The other modem gives 90 days, then you're on your own.

Not only will you find Mitey Mo mighty useful, you'll find it mighty reasonably priced. Call us at (415) 633-1899 and order your Mitey Mo today.

Search/Update. To recall a particular form, all you need to remember is any one piece of information that you cataloged. Any segment of any field can retrieve a form. You can use double periods to precede, follow or substitute for any combination of letters or numbers that you may not be able to remember. And if you can recall nothing about how an item was filed, then you can call up every entry on the disk until you find the one you need.

Remove. This option permits the deletion of any or all forms in a file. A warning message is displayed before any item is permanently deleted, to prevent accidental loss of data.

Print. This allows you to print out either an entire form or only certain segments of a form (in a predefined, flexible format). Print specifications can be saved, so you need only design a particular print format once.

There is also a Sort function, which will organize a number of forms in ascending order. However, the fields will be printed in the order in which they appear on a particular form and cannot be juggled. To change their order, you must go to Design File.

One obvious problem with PFS: File is that you cannot create multiple files on one disk. Since a disk can hold approximately 1000 forms, using an entire disk for 20 or 30 items is a waste of time and disk space. It would be more efficient to have multiple files on the same disk, so that related small files could be grouped together (e.g., birthdays and anniversaries).

PFS: File's ease of use makes it a program worth owning. Following the tutorial in the manual should take you no longer than one hour. It is concise, clear and compact.

All PFS programs work together to form an integrated software family. PFS: Report can combine with PFS: File to further refine your records. The Report program (which only works with PFS: File) generates summaries, tables and basic math functions. PFS: File is unable to crunch numbers, so in some applications the use of the Report program will be a necessity.

Although PFS: File will not accomplish anything that you couldn't do yourself, with plenty of paper and a lot of time, it will make your record-

keeping much more efficient and add a professional finish to your files. (Software Publishing Corp., 1901 Landings Drive, Mountain View, CA 94043. C-64/\$79.95 disk.)

Howard Millman
Irvington, NY

Robotron:2084 **B**

*The Robots Are Revolting!
Can You Stop Them or
Will They Rule the World?*

The scenario in Robotron:2084 is simple. The robots that were created initially to help mankind suddenly turn on their makers, and the only humans left on earth are clones. Your mission is to save those remaining humans, keeping yourself alive at the same time. This is not as easy as it may sound.

You are armed with only an anti-robot laser gun, which isn't nearly enough. Your enemies are not particularly fast, but there is an endless supply of them and they have weapons of their own. The mindless grunts are the most numerous of your robot foes. They will not stop their relentless pursuit until you zap them, or until they catch you. And there are the indestructible hulks that seem to wander aimlessly—but not quite harmlessly. And watch out for the giant brains; they are not very fleet of foot, but they fire cruise missiles that will seek you out no matter where you run. Spheroids, enforcer embryos, galvanizing electrodes, cubic quarks, torturing tanks and bounce bombs all have only one mission—to kill you.

The one very simple key to playing Robotron:2084 is to shoot everything that moves. If an object doesn't vaporize and isn't an indestructible hulk, then it is most likely a clone, which you should touch (thus saving it) before it is turned into a mutant frog by a giant brain or is annihilated by a hulk. But be careful not to let anything touch you.

If you can manage to clear the grunts from the screen (as well as

anything else that might be moving around), you will move onto the next level. After five levels, the giant brains appear and must be destroyed before they can launch their missiles. It doesn't end there, either. You must still fight the sinister spheroids, enforcer embryos, cubic quarks, torturing tanks and bounce bombs.

If you are coming to the conclusion that Robotron:2084 is a confusing, chaotic and frantic game, you are right. This is probably one of the most difficult shoot-'em-up games to come along. The first few times you play, don't expect to live very long. There is so much going on that you could play for hours before you discover all the aspects of the game. There is nothing educational about Robotron:2084, nothing meaningful and no deep or hidden messages. There's just fast action and fun.

Robotron:2084 is one of the better arcade game conversions from Atari-soft. It is available on cartridge for both the C-64 and VIC-20. Although they have the same name, rules, packaging and general play-action, the C-64 version is clearly the better of the two. The VIC-20 version is a bit clumsier and the graphics are not nearly as detailed.

I would recommend Robotron:2084 to anyone who enjoys joystick action arcade games. It will challenge even the most skillful fire-button fiends from the first minute, to the fiftieth, to the five hundredth. This is a better than average game that is frustratingly fun. (Atarisoft, 1399 Moffett Park Drive, Sunnyvale, CA 94088. C-64, VIC/\$44.95 cartridge, C-64; \$29.95 cartridge, VIC.)

COMMODORE 64 COLOR GRAPHICS: A BEGINNER'S GUIDE

by Shaffer & Shaffer Applied Research & Development

This book will teach you to navigate the Commodore 64 through an ocean of colors. The picture on the cover of this book was created with the Commodore 64, and you'll find the program used to create it carefully explained here, step by step. Covers everything from plotting a point and drawing a line to controlling colors and creating and moving small objects. Includes helpful color charts, design charts—plus all the tools you need to get started producing graphics with a wide range of practical business applications.

Join the Personal Computer Book Club and get this

book FREE!

as a painless introduction to text adventuring for the faint of heart.

In *Seastalker*, you are the inventor of the Scimitar, a two-seater sub that has yet to be tested under real use. While working in your lab, you receive a message from your colleagues at the Aquadome, an undersea research center, that they are in trouble. Communications are interrupted, though, and you don't know what the trouble is, other than it is serious enough to threaten the Aquadome's existence. You must find out what the problem is and solve it, using the Scimitar and the help of various crew members, one or more of whom may be traitors!

This brief synopsis gives only a hint of the scope of this adventure. The various places (lab, sub, Aquadome, Fropton Bay), the numerous characters (nine others besides yourself) and all the different equipment (sonarphone, depth finder, emergency survival kit, computestor, to name a few) give a seemingly never-ending variety to the game.

While the program is close to perfect, the packaging is even better. The main folder opens to reveal a nautical chart of Fropton Bay, at the edge of which your lab is situated. You must navigate the bay in your sub to get to open ocean and the Aquadome; there are shoals, rock spires and submerged wrecks to avoid. (Or, maybe you should investigate the wrecks instead!)

Inside the folder is the Scimitar Logbook. Two pages each are devoted to the sub itself, the lab and the Aquadome.

Also included in the folder are eight Top Secret Infocards. One side of each card gives a brief biography of some of the characters in the story; the other side has hidden clues to help you along in the game. Even the hints force you to think, however; in each one, a blank space appears instead of a key word or phrase. If you need further proof of Infocom's attention to detail, there is also a Discovery Squad Badge included.

By the way, Infocom's adventure games have no graphics, but when was the last time you read a good book that needed illustrations? *Infocom* (55 Wheeler St., Cambridge, MA 02138. C-64/\$49.95 disk.)

Dancing Feats C

*Compose Your Own Songs
And Discover the Musical
Potential of Your C-64*

Some of the products designed to take advantage of the Commodore 64's musical ability are close to

true synthesizers, while others are more simplistic, and are really just noisemakers. In the middle of this range of products is *Dancing Feats* from Softsync. This program allows you to compose simple pieces of music.

Dancing Feats supplies you with a backup band, to which you add the main melody, using a joystick to control the notes. From the Main menu, you can select the bass, beat, style, tempo and ending music of your backup band.

Each choice you make reveals another menu. For example, the options available to you on the Choose Beat menu are: Cool, Beguine, Syncoated and Dance.

The screen that displays the music shows eight horizontal lines, and with the combination of backup parameters that you selected playing simultaneously, you use the joystick to enter the main melody. The joystick's eight positions correspond with the standard eight-note musical octave. As you move the joystick, vertical, colored bars appear above the notes you are creating; at the bottom of these bars are the names of the notes. You can change the octave of the notes you select by pressing the fire button; a line in the lower-left corner tells you the chord of the current musical phrase. You may also dispense with the backup band and compose your music without accompaniment.

To end a composition, press the space bar to play the finale that you selected earlier.

Nothing is stored, either on disk or in the internal memory of the computer, unless you type R (for Record) at the Main menu. According to the instructions, one hour's worth of music can be stored in memory by using this command. Only one piece at a time can be in memory, so if you load one song right after another, the first will disappear. (For some reason, a cappella pieces cannot be recorded.) After storing, you can play back your composition.

The documentation supplied with *Dancing Feats* consists of a small pamphlet, which glosses over most musical terms with cursory definitions. The program's commands and functions are fully explained and nothing that you may need is omitted. A Command Summary at the

Attention Commodore® Computer Owners

Looking for a versatile disk drive that efficiently interfaces with your Commodore® personal or business computer? Then look no further. MSD offers not just one drive, but two — the SD-1 and the SD-2 Super Disk Drives.

With the SD-1 Super Disk's 4K buffer memory, you can open more files at any one time. Its rapid internal operations allow you to execute utility commands in a minimal amount of time and to format disks in only 17 seconds. If you demand more and thus faster duplication, however, then the SD-2 is for you. You can format, copy and verify in less than 2 minutes — twenty times faster than if you used two single drives together.

Both drives feature state-of-the-art design for exceptional durability and longer life. Both feature unique vertical loading for greater space savings. And neither will ever overheat.

Call MSD today for more information or the location of the dealer or distributor nearest you.

end of the instructions provides a handy reference to the program.

Dancing Feats does suffer from a few problems. The first (and most important) is that a joystick was not designed to be a musical instrument, and it sometimes slips ever so slightly, so that you wind up with two notes where you only wanted one. It would have been helpful if Softsync had allowed for the use of the keyboard as an alternative to a joystick.

Another problem is the quality of the backup band. While they never miss a beat, the rhythm section is fuzzy and the music begins to sound more or less the same no matter what selections you make in the starting menus.

Although you can enter notes as quickly as you can move the joystick, you can't make those notes last longer than a conventional eighth-note, which is very limiting if you want to compose anything more sophisticated than quick, jazzy numbers.

Also, the Save and Load functions need some work. There is no way to get a list of what compositions are on a particular disk while you are in Dancing Feats. And if you try to save a piece using the same name as a song already on the disk, Dancing Feats does not let you know that the Save was unsuccessful. A few more programming lines could have solved this problem.

Dancing Feats is billed as "The

One-Man Joystick Band." Like other one-man bands I've heard, the quality of the music produced is secondary to the novelty of one person being able to mimic an entire band. While Dancing Feats is an easy way to explore some of the musical capabilities of your Commodore 64, the program's limitations may leave you frustrated before long. (Softsync, Inc., 14 East 34th St., New York, NY 10016. C-64/\$29.95 disk.)

Juno First

*This Shoot-'em-up
From Datasoft
Offers Nothing New*

If you like plenty of action in your games, then Juno First might be what you're looking for.

Gameplay is initiated with the joystick or joysticks (either one or two people can play). This version by Datasoft is a translation of the arcade game of the same name. If you don't remember the arcade version of Juno First, it's no surprise, as it was not a particularly popular game.

The graphics are relatively sparse

and the sound effects are only mediocre, but the quality of the animation is good. The continuing challenge level of the game is fairly high, and the action is very exciting indeed!

The scenario is this: You're traveling through space at warp speed when you encounter a fleet of (presumably) hostile alien ships. These enemy ships are approaching very quickly from the horizon directly in front of you, and your job is to blast them before they can destroy you. Although the plot is fairly simplistic, accomplishing this task is far from simple. These aliens just don't quit!

The game comes on both disk and cassette in the same box. This double-media format is a good idea, since you'll always have a backup copy of the game.

If you're looking for strategy, a plot, stunning graphics or pleasant music, you'll probably have to keep on looking. On the other hand, if you just happen to have an itchy trigger finger, Juno First will give you plenty of arcade action. (Datasoft, 19808 Nordhoff Place, Chatsworth, CA 91311. C-64/\$29.95 disk and tape.)

Bricktown, NJ

The Tax Manager

*Manage Your Taxes
Effectively and Reduce
Your Tax Liability*

The Tax Manager is one of several tax preparation programs that allow you to enter all of your tax information into your C-64 for automatic calculation and subsequent printing of facsimile tax forms. What sets this program apart from most similar efforts is the inclusion of a tax guide to help you determine exactly which forms and schedules you are required to fill out, and a tax checklist to remind you of any deductions that you may have overlooked.

Flight Simulator II

For Commodore 64[™]
Computers

Put yourself in the pilot's seat of a Piper 181 Cherokee Archer for an awe-inspiring flight over realistic scenery from New York to Los Angeles. High speed color-filled 3D graphics will give you a beautiful panoramic view as you practice takeoffs, landings, and aerobatics. Complete documentation will get you airborne quickly even if you've never flown before. When you think you're ready, you can play the World War I Ace aerial battle game. Flight Simulator II features include ■ animated color 3D graphics ■ day, dusk, and night flying modes ■ over 80 airports in four scenery areas: New York, Chicago, Los Angeles, Seattle, with additional scenery areas available ■ user-variable weather, from clear blue skies to grey cloudy conditions ■ complete flight instrumentation ■ VOR, ILS, ADF, and DME radio equipped ■ navigation facilities and course plotting ■ World War I Ace aerial battle game ■ complete information manual and flight handbook.

See your dealer . . .

or write or call for more information. For direct orders enclose \$49.95 plus \$2.00 for shipping and specify UPS or first class mail delivery. American Express, Diner's Club, MasterCard, and Visa accepted.

Order Line: 800 / 637-4983

subLOGIC

(217) 359-8482 Telex: 206995

If you're not sure which tax forms you are required or eligible to file, the tax guide takes you through a series of several yes or no questions to help you determine which forms to use. When you've completed the questionnaire, a simple keystroke will give you an on-screen list of all the necessary forms.

In order to help you take full advantage of any deductions for which you might be eligible and to ensure that you don't overlook any income that you are required to report, The Tax Manager provides a nine-category checklist. Categories include Taxable Income Items, Business or Professional Deductions, Energy Tax Credit Items, Non-Deductible Items and Items Not Taxable. Each category can be reviewed in its entirety or searched for keywords.

Once you've learned which forms you must file, what deductions you're eligible to take and the income you

must declare, you are ready to begin preparing the forms. At the Tax Preparation menu you can select both the proper forms and the automatic sequence in which they should appear on the screen. Available are forms 1040, 1040EZ, 1040ES, 2106, 2210, 2119, 2441, 3468, 3903, 4625, 4797, 5695 and 6251, as well as schedules A through G, R and RP, SE and W.

While in the process of entering tax information, you can use the function keys to move back and forth among the various forms. Another useful feature of The Tax Manager is the automatic transfer of information between forms. For example, once you've calculated your net profit on Schedule C, you can return to the 1040 form to find the amount already in place on line 12 (Business Income).

At any point, all forms and information can be saved on disk or printed out. Except for the 1040, all

forms and schedules are printed in acceptable IRS formats. Information from the 1040 can be printed on plain white paper and then combined with a transparency of an actual 1040 (not included in the package) to produce an acceptable copy.

Obviously, if you only file a few tax forms each year, you'll want to think twice before spending \$74.95 for more options than you'll probably ever use in a lifetime. If, however, each tax season finds you buried beneath an ever-increasing pile of tax forms, then The Tax Manager could be just what you need. It is one of the most powerful and complete tax preparation programs available. (MicroLab, Inc., 2699 Skokie Valley Road, Highland Park, IL 60035. C-64/ \$74.95 disk.)

PRINT PICTURES, GRAPHICS IN BRILLIANT COLOR

\$159⁹⁵

The Okimate 10 Color Printer from Okidata can handle all your printing needs. Pop the "clean hands" black ribbon cartridge into the printer for your letters, memos, reports and papers. Then easily switch to the color ribbon and print full color pictures, charts and graphs!

Okimate 10 makes its color by actually mixing colors. That means you can get 40, 50 or even more colors. You can also print text in different colors. Choose red, orange, yellow, green, blue, purple or black.

The "Learn To Print" software package that comes with the Okimate 10 will teach you how to print your letters and artwork in a few easy steps.

Okimate 10 lets you use a wide variety of paper. Smooth paper works best for color printing. Also prints on computer paper, single sheets, letterhead, thermal paper, mailing labels, and even plastic acetate for overhead transparencies.

PLUG 'N PRINT PACKAGE

The special Plug 'N Print package is required to interface the Okimate 10 to your Commodore 64 computer. It includes everything you need to begin printing: black ribbon (prints 75 pages); color ribbon (prints 10 full-page screens); computer paper starter set; data cable; printer handbook; Learn to Print software; Color Screen Print software package; and Commodore Operating Module.

Save wear and tear on your cartridge contacts. Handy and convenient!

33227 **\$34.95**

SPACE SAVING PRINTER STAND

At last a printer stand proud for homes and small offices! We've always liked the convenience and organization of an elevated printer stand - you can put your paper underneath the stand to save valuable table space and make feeding easier. The problem, up until now, has been price. Stands sold to the office market often cost \$40, \$50, \$60 or even more! These great new stands from Suncom, a leader in microcomputer accessories, solve the price problem and offer features not found on models costing more than twice as much. The stands feature heavy duty welded steel wire construction and have a heavy vinyl coating to reduce noise and vibration and provide an attractive appearance that will blend with your computer decor. Another plus that the designers of many more expensive stands left out: our Suncom stand holds the printer at an angle that makes it much easier to see your output as it is being printed.

We use one in our office and agree that this much convenience at such a low price is a real value. Available in two widths: 12" for most 80 column printers (Gemini 10X, RX-80, BX-80, 1526, etc.), and 18" for most 132 column printers (Gemini 15X, FX-100, etc.).

33232 12" Printer Stand	*14.95

Everybody can use a little advice when it comes to loans and investments. This program turns your Commodore into a computer consultant.

MONEY MANAGER

In the August 1978 issue of *Kilobaud* magazine, there's an interesting financial calculator program for the old 8K PET ("FINANC: A Home/Small-Business Financial Package," by Les Palenik). I've used this program quite a lot and found it extremely helpful on more than one occasion. I decided to resurrect this program for the new group of Commodore 64 users.

During the many years I've used this program, I've been cleaning up and condensing it somewhat. I deleted the depreciation calculations, since they didn't seem appropriate for the home user, and I then combined the remaining functions into one large function menu, instead of having a number of smaller menus. I also cleaned up the print formatting and overall program flow. My version is about half the size of the original program, with about one-third the number of lines.

When you start the program, you'll see a large menu showing the various

FINANCE CALCULATOR

INVESTMENT CALCULATIONS

- 1 — FUTURE VALUE OF ONE-TIME INVESTMENT
- 2 — FUTURE VALUE OF REGULAR DEPOSITS
- 3 — REGULAR DEPOSITS REQUIRED TO CREATE A DESIRED TOTAL VALUE

LOAN CALCULATIONS

- 4 — REGULAR PAYMENT ON A LOAN
- 5 — LAST PAYMENT ON A LOAN
- 6 — TERM OF A LOAN
- 7 — REMAINING BALANCE ON A LOAN
- 8 — COST OF BORROWING
- 9 — END OF PROGRAM

Money Manager Start-Up Menu

calculations that the program can perform:

- INVESTMENT CALCULATIONS
- 1) Future value of a one-time investment
 - 2) Future value of regular deposits
 - 3) Regular deposits required to create a desired total value
- LOAN CALCULATIONS
- 4) Regular payments for a loan
 - 5) Final payment on a loan
 - 6) Term of a loan
 - 7) Remaining balance on a loan
 - 8) Cost of borrowing

Simply enter the number of the desired function. From then on, the program will prompt you for any necessary information. The computed results will be displayed with all values rounded to the nearest cent. You'll then be given an option to perform another calculation of the same type, using different values.

If you don't choose another calculation, you'll be returned to the main menu, where you may select another function or press 9 to

terminate the program. To keep things simple, the program does not do any input validation, nor does it protect against input errors.

Several input prompts request a time period in years and months. When answering these prompts, you must enter two numbers separated by a comma. If you accidentally enter only one value, the computer will display two question marks and let you enter the second value. If anything seems to get out of whack, try

SOLO FLIGHT SIMULATOR

**REAL LIFE CHALLENGES FOR THE AIR FORCE MAJOR —
GREAT FUN AND LEARNING — FOR HIS 10 YEAR OLD SON!!!**

"... Solo Flight ... has so many features that it may take months to master the program. It is an excellent buy, and a real joy for novices and old pro's alike."
— Jim Stephens, RUN

"The word that best describes Solo Flight is Fun ... it's (for those who) don't wish to spend a lot of time reading, but would rather be flying."
— David Florence, COMPUTE'S Gazette

"Solo Flight ... is a flight simulator designed with fun in mind ... it is easier to fly than Sublogic's Flight Simulator and ... it is more fun to play."
— John Anderson, Creative Computing

"Solo Flight is the BEST flight simulator I've seen for any micro-computer. And I include the Microsoft simulator for the IBM-PC ... it will be tough to top this one!"
— Jim Bumpas, BUMPAS REVIEWS

Major Bill has over 3000 hours of flying. He loves the sophistication of the SOLO FLIGHT simulation and its real life challenges of deteriorating weather, failing instruments, and overheating engines!! He knows the reality of flight — with SOLO FLIGHT he can bring it home!!

Bill Jr. has no real flying hours, but just moments after he plugs in his joystick, he's airborne, experiencing the fun and learning of flight. He loves the great 3-D graphics, the takeoffs, the touch and go's, and the NEW "INSTRUCTOR PILOT" option which enables the computer to give him flight instruction just like his fighter pilot Dad would!! Bill Jr. loves the fun of flying — with SOLO FLIGHT he has it!!

SOLO FLIGHT is a real flight simulator that includes VOR's, ILS, 21 different airports, VFR, and IFR flying. SOLO FLIGHT is easy to get started with, but you will get hooked on its Fun and Excitement!! Try to master

all the challenges of SOLO FLIGHT. But be careful, because that may take many more flying hours than a Major has!!

SOLO FLIGHT is available for Commodore-64, APPLE, IBM, and ATARI computers. Suggested retail price is only \$34.95. Find SOLO FLIGHT at your local retailer, or call or write for MC/VISA, Money Order, or COD orders. Add \$2.50 for postage and handling (Int'l, add \$4.00 USD). MD residents add 5% sales tax.

ANOTHER CALCULATION (Y/N):

stopping the program and running it again.

In the program listing, the menu display and function selection is handled by lines 230-410.

The actual functions are handled by lines 420-1340, with each function starting at the line indicated in the On...Gosub statement in line 400.

The first function starts at line 420, the second at line 520, the third at line 630 and so on.

The remaining lines, 1350-1450, form three subroutines that are used throughout the program to ask for another calculation and format output values. [R]

Here's a program that lets you keep track of your real estate expenses and income while providing a realistic analysis of your investments.

Silent Partner, the

LANDLORD'S HELPER

Most owners of rental property become expert painters and fair plumbers. The hardest skill to learn, however, is figuring out why the operating account always needs more money. Investing in real estate is within the reach of most working people and can be an important step toward financial security.

What the Program Does

The main purpose of Silent Partner is to report and summarize the pertinent facts about your property's operation. The printout is similar to the monthly statement a rental management company would provide. It shows all sources of income (including the "deposits by owner" category), each expense by type and amount and the resulting totals.

Each expense is broken down as a percentage of total expenses and a percentage of rental income. This helps you spot problems that might not be obvious from glancing through the checkbook ledger. If repairs are averaging 50% of income, it's time to consider selling the house while it's still standing.

The program also does some basic investment analysis. It averages cash

1 — ENTER DATA
 2 — READ FROM FILES
 3 — EXIT PROGRAM

 ENTER YOUR CHOICE-?

Landlord's Helper Start-Up Menu

flow and, armed with purchase price and down payment, computes gross rent multiplier and return on equity. Over a period of time, the results of these calculations reveal the fiscal facts about the performance of your investment.

Although the program is not designed as a checkbook balancer, the printout should run a close parallel to your banking records. If you pay attention to beginning balances each month and include bank charges under miscellaneous expense, Silent Partner will get along fine with the bank.

Before printing, you can save each month's entries on a disk file. Each sequential file is automatically named by

recombining the month with the first two characters of the property's address.

For example, the file containing July's entries for 912 Austin Street would be saved as "91JULY." This way, records for more than one property can be kept on the same disk.

After collecting files for a few months, several can be read into memory and totaled for a quarterly or year-end summary. This printout gives you a good perspective of long term operation by smoothing

out the effects of unusual or temporary occurrences, such as a vacancy. The year-end printout is helpful in projecting future cash flow or in comparing several properties, and is especially handy at tax time.

Since most mortgage companies impound real estate tax and insurance installments along with the monthly loan payment, the program's loan category is PITI (principal, interest, taxes and insurance). When the mortgage company sends you an interest-paid notice at the end of the year, pencil in the breakdown on the year-end printout.

Don't overlook Silent Partner when considering the purchase of new or

\$360.23

Table 1. Sample printout of Silent Partner program.

additional rental property. Estimate income and expense, enter asking price and down payment, and let the computer forecast the bottom line. The program can help evaluate other "what if" situations, too. Maybe you are renting a house for \$500, utilities included. How would overall return be affected by offering the property at \$425 with the tenant paying the electric bill? Run the program with modified figures and compare the results.

User's Manual

When the program is run, the menu presents you with two choices: enter data or read from files. When selecting the former, you supply the property's address and the month. Then each category of income and expense is displayed, prompting you for the amount. If there is no entry for a particular item, just hit the return key and the program will enter a 0.

When all the prompts have been answered, you have a chance to review the entries and correct any mistakes before continuing. After you've approved the facts and figures, the entries are saved as a file. The program is then ready to print the monthly summary.

If you select the Read From Files option, you supply the month (or the first and last months for a multi-month summary) and the first two characters of the desired property's address. The beginning balance will be picked off the first month as it's read in, and any security deposit liability is taken from the last month. The other categories are totaled for the printout.

You can take a shortcut around entering the same address, purchase price and down payment each month by first reading in a previous file. Then go to the menu and opt for the Enter Data option, which allows you to overwrite that month's numbers while preserving the other information. Since it's already in memory, you won't have to type it again.

The top and bottom function keys are used throughout the program. The f1 key returns you to the menu, and f7 causes something to happen, like starting the printer or sending a file to disk.

Silent Partner works on the Plus/4 if you make a minor addition to line 220:

220 F1\$ = CHR\$(133) : F7\$ = CHR\$(136) :
KEY1, F1\$: KEY7, F7\$

Also, since KEY is a reserved word on the Plus/4, replace the variable

KEY with FLAG in lines 470, 870, 1990 and 2400.

Fit to Your Needs

If my choice of categories doesn't fit your situation, it's easy to modify the arrays. For example, replacing condo fees with pool chemicals requires just one substitution in the Data line.

Separating taxes and insurance from the mortgage payment can be done the same way. If my printout lacks something you consider vital, such as capitalization rate or depreciation, it shouldn't be too difficult

to add the calculation and have it printed.

Datassette owners can modify the Open lines at the beginning of the file read/write modules. No other changes should be necessary. I use the program with a Commodore MPS-801 printer; if your printer is non-Commodore, some brief trial and error may be needed to get the printout just right.

While Silent Partner won't rain-proof a roof or keep the plumbing in good order, it will give you an

indication of whether a rental should send cash flow into or out of your wallet, and some of the reasons why.

This program helps you balance the books and evaluate the performance of your invested dollars. It's flexible, easy to work with and may be the source of useful information in your financial planning. R

SUPERTAX™

Get Supertax now and relax on April 15th...

THIRD SUCCESSFUL YEAR! • THOUSANDS ALREADY IN USE!

Use SUPERTAX personal income tax programs to calculate your tax liability now and have plenty of time to make year-end investment decisions to improve your position. SUPERTAX was created for Commodore 64 users by a practicing CPA with a Master's degree in tax accounting. Highly acclaimed by tax pros, CPAs and tax preparers, SUPERTAX is easy to understand and a pleasure to work with. SUPERTAX is also available for TRS-80 (2 drives), Apple II+, IBM-PC, Kaypro II and Sanyo MBC-550.

- SUPERTAX is fully screen-prompted and includes a manual loaded with valuable tax information, instruction and guidance.
- SUPERTAX instantly recalculates your entire return when you change any item.
- SUPERTAX prints directly on IRS forms.
- SUPERTAX DATA can be stored on a diskette.
- SUPERTAX updates are available at 50% discount to registered SUPERTAX owners.
- SUPERTAX is an essential addition to your personal software library—best of all it's tax deductible.

FOR TAX PLANNING

Using either screen or printer output, SUPERTAX generates clear and concise summaries of Page 1 and 2 and Schedule A of FORM 1040 allowing you to see at a glance and to quickly comprehend your tax situation. This program also prints an OVERALL SUMMARY of the return showing Adjusted Gross Income, Itemized Deductions, Taxable Income, Regular Tax and Payment Due or Refund—all of which are calculated by the program. SUPERTAX also calculates the moving expense deduction, investment credit, taxable capital gains, political and child care credits, medical limitations, and much more. Input is fast and easy and changes can be made in seconds. This program actually makes tax planning a breeze.

FOR RETURN PREPARATION

SUPERTAX PRINTS THE INCOME TAX RETURN: This program prints page 1, page 2 of the FORM 1040, Schedules A, B, C, W and G (income averaging) of the FORM 1040 as well as FORM 3468 (investment tax credit) on standard IRS government forms or on blank computer paper for use with transparencies. Any item of input can be changed in seconds and the entire return is automatically recalculated to instantly reflect the change.

Commodore 64, TRS-80, Apple II+, IBM-PC, Kaypro and Sanyo are trademarks of Commodore Business Machines, Tandy, Corp., Apple Computer, Inc., International Business Machines, Non-Linear Systems, Inc. and Sanyo Business Systems Corp. respectively.

FOR DEPRECIATION CALCULATION

SUPERTAX also includes a stand alone depreciation program which calculates and prints your complete depreciation schedule using both the old rules and the new ACRS rules. Output from the depreciation program is designed to serve as a supplement to IRS FORM 4562. **\$99**

New—PREPARER'S EDITION: In addition to the above, the PREPARER'S EDITION prints Schedules D, E, SE and FORM 6251. It also prints preparer data at the bottom of pg. 2 of FORM 1040. **\$149**

A Printer For All Reasons

Search For The Best High Quality Graphic Printer

If you have been looking very long, you have probably discovered that there are just too many claims and counter claims in the printer market today. There are printers that have some of the features you want, but do not have others. Some features you probably don't care about, others are vitally important to you. We understand. In fact, not long ago, we were in the same position. Deluged by claims and counter claims. Overburdened by rows and rows of specifications, we decided to separate all the facts — prove or disprove all the claims to our own satisfaction. So we bought printers. We bought samples of all major brands and tested them.

Our Objective Was Simple

We wanted to find that printer which had all the features you could want and yet be sold directly to you at the lowest price. We wanted to give our customers the best printer on the market today at a bargain price.

The Results Are In

The search is over. We have reduced the field to a single printer that meets all our goals (and more). The printer is the GP-550CD from Seikosha, a division of Seiko (manufacturers of everything from wrist watches to space hardware). We ran this printer through our battery of tests and it came out shining. This printer can do it all. Standard draft printing up to a respectable (and honest) 86 characters per second, and with a very readable 9 (horizontal) by 8 (vertical) character matrix. At this rate, you will get an average 30 line letter printed in only 28 seconds.

"NLQ" Mode

One of our highest concerns was about print quality and readability. The GP-550CD has a print mode termed Near Letter Quality printing (NLQ mode). This is where the GP-550CD outshines all the competition. Hands down! The character matrix in NLQ mode is a very dense 9 (horizontal) by 16 (vertical). This equates to 14,400 addressable dots per square inch. Now we're talking *quality* printing. You can even do graphics in the high resolution mode. The results are the best we've ever seen. The only other printers currently available having resolution this high go for \$500 and more *without* the interface or cable needed to hook up to your Commodore!

Features That Won't Quit

With the GP-550CD your computer can now print 40, 48, 68, 80, 96, or 136 characters per line. You can print in ANY of 18 font styles. You not only have the standard Pica, Elite, Condensed and Italics, but also true Superscripts and Subscripts. Never again will you have to worry about how to print H₂O or X². This fantastic machine will do it automatically, through easy software commands right from your keyboard. All fonts have true descenders.

One of the fonts we like best is "Proportional" because it looks most like typesetting. The spacing for thin characters like "i" and "l" are given less space which "tightens" the word making reading easier and faster. This is only one example of the careful planning put into the GP-550CD.

Do you sometimes want to emphasize a word? It's easy, just use **bold** (double strike) to make the words stand out. Or, if you wish to be even more emphatic, underline the words. Or do both. You may also wish to "headline" a title. Each basic font has a corresponding elongated (double-wide) version. You can combine any of these modes to make the variation almost endless. Do you want to express something that you can't do with words? Use graphics with your text — even on the same line.

You can now do virtually any line spacing you want. You may select 6, 8, 7½ or 12 lines per inch. PLUS you have variable line spacing of 1.2 lines per inch to infinity (no space at all) and 97 other software selectable settings in between. You control line spacing on a dot-by-dot basis. If you've ever had a letter or other document that was just a few lines too long to fit a page, you can see how handy this feature is. Simply reduce the line spacing slightly and... VOILA! The letter now fits on one page.

Forms? Yes! Your Letterhead? Of Course!

Do you print forms? No problem. This unit will do them all. Any form up to 10 inches wide. The tractors are adjustable from 4½ to 10 inches. Yes, you can also use single sheets. Plain typing paper, your letterhead, short memo forms, anything you choose. Any size under 10" in width. Multiple copies? **Absolutely!** Put forms or individual sheets with carbons (up to 3 deep), and the last copy will be as readable as the first. Spread sheets with many columns? **Of course!** Just go to condensed mode printing and print a full 136 columns wide. Forget expensive wide-carriage printers and changing to wide carriage paper. You can now do it all on a standard 8½" page.

Consistent Print Quality

Most printers have a continuous loop ribbon cartridge or a single spool ribbon which gives nice dark printing when new, but quickly starts to fade after a while. To keep the printers' output looking consistently dark, the ribbons must be changed more often than is healthy for the pocketbook. The GP-550CD solves this problem completely by using a replaceable, inexpensive ink cassette which is separately replaceable from the actual ribbon. It keeps

the ribbon loaded with ink at all times. You only replace the ribbon when it truly wears out, not when it starts to run low on ink. Just another example of the superb engineering applied to the GP-550CD. (When you finally do wear out your ribbon, replacement cost is only \$10.95. Ink cassette replacement cost is only \$5.95, both postpaid.)

The Best Part

When shopping for a quality printer with all these features, you could expect to pay around \$500 or more. *Not any more!* We have done our homework. You don't have to worry about interfaces or cables. Everything is included. We are now able to sell this fantastic printer for **only \$259.95!** The GP-550CD is built especially for the Commodore 64, VIC-20, Plus 4 and C-16. All Commodore graphics are included. This printer does everything the Commodore printers do but has more features. **You need absolutely nothing else to start printing — just add paper.** We also have specific models for other computers. Call for details.

No Risk Offer

We give you a 15-day satisfaction guarantee. If you are not completely satisfied for any reason we will refund the full purchase price. A 1-year warranty is included with your printer. The warranty repair policy is to repair or replace and reship to the buyer within 72 hours.

The Bottom Dollar

The GP-550CD is only \$259.95. Shipping and insurance is \$8.00 — UPS within the continental USA. If you are in a hurry, UPS Blue (second day air) is \$18.00. Canada, Alaska, Mexico are \$25.00 (air). Other foreign is \$60.00 (air). California residents add 6% tax. These are cash prices — VISA and MC add 3% to total. We ship the next business day on money orders, cashiers' checks, and charge cards. A 14-day clearing period is required for checks.

WHATEVER HAPPENED TO FAY WRAY

Kong
should have
backed her up
with the **NEW**
Copy Q

In the software jungle,
no copy program for the Commodore 64™
works better or copies more at any price!
Copy Q is the fastest, most reliable, and easiest-to-use.
And **Copy Q** even comes with a backup!

The **NEW Copy Q** contains a TRUE INTELLIGENT NIBBLER which copies all the information on a disk and even the newest copy protection including half tracks, track 36+, varying data density, misordered and extra sectors, gap and sync tracks, and much more.

Copy Q is fully automatic. There are no parameters to set. You don't even need to swap disks when using two drives.

And **Copy Q** makes the FASTEST backups by using intelligent scanning, data compression, and super-fast data communication. Most disks are copied in just three minutes. And many disks that require extensive nibbling are copied in less than five minutes.

Copy Q contains other features found nowhere else: **Copy Q** revirgins disks rather than erasing them. **Copy Q** also contains a utility that automatically backs up any data disk and removes all data errors in just two minutes.

It's a software protection jungle and your data and program integrity are at stake. So don't monkey around with the others. You can climb straight to the top with the **NEW Copy Q** by Q-R & D.

Now only **\$39.95**
Seven day money back guaranteed.

Copy Q and other fine Q-R & D products are available at B. Daltons, La Belles, and more than 300 dealers nationally. For the name of the dealer nearest you call:

STAR'S NEW
PRINTERS WORK
20% FASTER.
COST 20% LESS. ARE
100% CERTAIN TO
CHANGE YOUR MIND
ABOUT PRINTERS.

This new dual-mode SG-10 is only \$299.

N

o printer could be more appealing than one you design yourself.

And, in effect, that's what you've done.

The new "S" series printers from Star Micronics have been designed not to our specifications, but to yours. With values that confound our accountants but will make great sense to you.

These printers are faster than ever. More compatible and reliable. With more added in and fewer add-ons.

And yet they cost *less*.

Don't try to figure it out. Just enjoy.

NLQ IS 1 OF 2

Because we've increased our printing throughput by 20%, you can now finish 6 pages in the time it used to take to print 5. And even though we've upped our speed, we've kept up our quality.

In fact, on three of our new models, both draft and near-letter-quality are standard (no extra charge). A fourth model, the SB-10, prints draft and letter-quality standard (again, not extra).

So now, with just *one* printer, you're ready for data processing and word processing. That's like owning two printers for the price of just one.

GET ON LINE BY JUST PLUGGING IN

The new Star "S" series printers are fully compatible with even the most fickle of personal computers.

And they're especially friendly with IBM®PC, Apple®, Commodore®, and all compatibles.

www.Commodore.ca
May Not Reprint Without Permission

In most cases, hooking up is no more complicated than putting a square peg in a square hole. But it's a lot more rewarding.

READY FOR ANY SOFTWARE

The new "S" series printers make printing as easy as 1-2-3."

Which is just one example of the many spreadsheet programs they're ready for.

The new Stars can work with word processing programs like WordStar.® Educational software like Dr. Logo.™ And even the new integrated formats like Framework™ and Symphony.™

So Star printers match hardware to software without disk-driving you crazy.

They handle many functions faster. They're more compatible. Less expensive. More reliable. And have a full year warranty. "S" series printers have been designed with so many of your needs in mind, it's as if you'd done it yourself.

And what a great job you did.

For a free demonstration, visit your local Star dealer.

SR-10 prints 200 cps for only \$649.

SD-10 types draft and NLQ, just \$449.

SR-15 includes 16K memory for spreadsheets, \$799.

Irvine, CA (714) 586-8850

Prices shown are manufacturer's suggested retail prices.

Invoices are a critical part of almost every business; this program provides the answer to every businessperson's invoice printing problems.

EASY INVOICES

An invoice is the most important piece of paper that is generated by a business. It establishes a record of cash flow, accounts receivable, inventory and so on.

Via your C-64 computer and printer, this program will print a professional, ready-made invoice for your customers. The original program appeared in a book entitled *Small Business Programs for the Commodore 64*, by S. Roberts, published by Elcomp Publishing, Inc. I was given permission by Elcomp's owner, Mr. Hofacker, to modify and use the program in this article.

To print out my invoices, I used a Commodore 1525E printer (10 characters per inch). However, with modifications to this program, you should be able to use any printer. You may also change the program's parameters for any layout of your choosing. Note that the program does all the calculating, right down to the invoice total, and also prints a shipping label.

The program is user-friendly and will print sections of the invoice as data is input. You must enter the date, the first invoice number (which the program will automatically increment with each new invoice), the account number, terms and so on.

When you are requested to input the items sold, enter only the item number. The program will search the Data statements (lines 2010, 2020, 2030, 2040 and 2050) for the item numbers, matching description and unit price.

After the last item is printed on the invoice—for final input—type 0 and press the return key. When the invoice is completed, the program will do all the necessary calculations—add up the items, prices, shipping costs and sales tax—and deduct the discount (if you so desire). The invoice will be printed with a shipping label.

Program Line Information

Your products or services should be assigned item numbers tied to a description, with unit prices in Data statements at the end of the program. In this example, refer to lines 2010, 2020, 2030, 2040 and 2050. If you have more items to list, then continue by adding more Data statements. The final Data line must read, for example,

```
2050 DATA 0,0,0
```

for the program to run properly. Once you have established your item numbers in the program, then you

must save your corrected invoice program on a formatted disk with a new name. This will be the disk that you will load to do your invoicing until you change items or pricing.

Discounts are contained in lines 700 to 730. You can alter these to suit your needs. S1 refers to the units shipped to the customer. For example, line 710:

```
IF (S1 > 0) AND (S1 < 30) THEN D = .25
```

means that if you had replied yes to the discount prompt—the quantity shipped was 25—the computer would execute line 710. Since 25 items were shipped and the quantity 25 was greater than 0 but less than 30, a 25% discount would be extended to the customer. Line 720 is 33%, line 730 is 40%.

Shipping costs are contained in lines 740 to 790. You can also alter these to suit your needs. The same quantity shipped (S1) determines the shipping costs, and you can change it in the same manner as in the above paragraph.

In the example invoice (see Table 1), shipping cost was automatically calculated based on the number (S1) of items shipped. The program also asks a question as to the dollar

RUN It Right

Commodore 64 or Plus/4

\$89 CLOSE-OUT

Sound Detonator Plus

Make your stereo system's sound explode with life. Improve the sound quality by 30 to 50%. Plus, you'll add tape dubbing too with this limited BSR \$89 close-out.

It's like night and day. Crashing cymbals, the depth of a string bass, more trumpets or more voice will come bursting forth from your stereo at your command.

You'll make your music so vibrant that it will virtually knock your socks off when you use this professional quality 10 band stereo Sound Detonator Plus Equalizer.

It has a frequency response from 5hz to 100,000hz ± 1 db. BSR, the ADC equalizer people, make this super equalizer and back it with a 2 year limited warranty. Our \$89 close-out price is just a fraction of its true \$249 retail value.

CAN YOUR STEREO SOUND BETTER?

Incredibly better. Equalizers are different from regular bass and treble controls. And, 10 band EQs are the best.

Bass controls turn up the entire low end as well as the low mid-range, making the sound muddy and heavy. With an equalizer, you simply pick the exact frequencies you want to enhance.

You can boost the low-bass at 31hz, 62hz and/or 125hz, and the mid-bass at 250hz and 500hz to animate specific areas of the musical spectrum.

And, when you boost the part of the bass you like, you don't disturb the mid-range frequencies and make your favorite singer sound like he has a sore throat.

The high frequencies really determine the clarity and brilliance of your music.

You can boost the mid-range and highs at 1,000hz, 2,000hz, 4,000hz, 8,000hz and 16,000hz. So, you can bring crashing cymbals to life at 16,000hz while at the same time you cut tape hiss or annoying record scratches at 8000hz.

You can also boost or cut specific mid-range frequency areas to add or subtract vocal, trumpets, guitars or whatever instrument ranges you prefer.

GREAT FOR 2 TAPE DECKS

You can push a button and transfer all the equalization power to the inputs of two tape decks. So, if you have a cassette deck in your car or a personal stereo that you wear, now you can pre-equalize your cassettes as you record them.

Now you can get all the dramaticly enhanced sound wherever you are. This

is an especially great feature for bass starved portables and high-end starved car stereos to make them come alive.

And, look at this. There are two tape inputs and outputs, so you can dub from tape deck A to B, or make two tapes at once with or without equalization.

EASY HOOK UP

Use your tape monitor circuit, but don't lose it. Now your one tape monitor circuit lets you connect two tape decks.

Just plug the equalizer into the tape 'in' and 'out' jacks on your receiver. We even supply the cables.

As you listen to your records, FM or 'aux', any time you push the tape monitor switch on your receiver you'll hear your music jump to life.

The output from your receiver is always fed directly to your tape decks for recording, and with the touch of a button, you can choose to send equalized or non-equalized signal to your recorders.

When you want to listen to a tape deck, just press a tape monitor button on the equalizer and your tape deck will work exactly as it did before. Except, that now you can choose to listen with or without equalization and you can dub.

You won't be listening to any distortion or hum. The Sound Detonator Plus has a 95db signal to noise ratio and total harmonic distortion of just 0.018%

Once you've set your equalizer controls, switch it in and out of the system. You'll hear such an explosive improvement in sound, you'll think you've added thousands of dollars of new equipment.

WHY A CLOSE-OUT?

Last year DAK closed out over 18,000 of BSR's 7 band equalizers because BSR had decided to only sell equalizers under their ADC name and they still had some left with the BSR name on them.

Well, as Detroit comes out with new cars each year, ADC comes out with new equalizers. We got them to supply us

with just 15,000 of last year's model before they shut down for the new one.

They had already paid for all the tooling, all the research and design, so we were able to buy these for less than half the normal price, for cold hard cash.

So, you can go to any HiFi store and buy this year's design in an ADC equalizer made by the parent company BSR, or you can get this \$249 value BSR equalizer while our limited supply lasts, for \$89.

THE FINAL FACTS

There are 20 slide controls, each with a bright LED to clearly show its position. Each control will add or subtract up to 12db. (That's a 24db range!)

There are separate sound detonation slide controls for each channel at 31hz, 62hz, 125hz, 250hz, 500hz, 1,000hz, 2,000hz, 4,000hz, 8,000hz, and 16,000hz.

LED VU meters with ±0.5db accuracy show levels for each channel. It is 17" wide, 6½" deep and 4½" tall.

PUT LIFE INTO YOUR MUSIC RISK FREE

Prepare for a shock the first time you switch in this equalizer. Instruments you never heard in your music will emerge and bring a lifelike sound that will envelop you and revolutionize your stereo system.

If your system doesn't spring to life, simply return the equalizer within 30 days in its original box for a refund.

To order your Sound Detonator Plus Tape Dubbing BSR 110X10 Band Stereo Frequency Equalizer risk free with your credit card, call toll free or send your check not for ADC's \$249 value, but for only \$89 plus \$7 for postage and handling. Order No. 9724. CA res add 6% tax.

Wake up the sound in your stereo. Your sound will explode with life as you detonate each frequency band with new musical life. And now you'll be in control of two tape decks as an added plus.

amount that should be charged for shipping costs (if the shipping costs will exceed the built-in program factors). Just type the dollar amount of the actual shipping costs that should be included in the invoice.

When inputting date information, abbreviate those months that exceed four letters (JAN, FEB, MAR, etc.). Also, don't type a comma after the day of the month; for example, type the date as Sept. 20 1984.

For additional copies of the invoice, I would suggest that you obtain fanfold (tractor-feed) computer paper that will give you an original and two copies. The additional copies are obtained by paper that doesn't require carbon. This will give you all the required copies—original to customer, second copy for your receivables file, and the third copy for your packing slip. Remember, there are shipping labels for you when the invoice is printed.

Your company's name, address, and so on is entered in lines 530 to 555 and lines 1300 to 1320.

This program has a Decimal Alignment subroutine in lines 1410 to 1570. Every business program must print dollars and cents. This subroutine aligns the decimal and adds 0 or .00 to the calculation.

If at some later date you do have preprinted invoices, this program can be tailored to print through your printer and fill in the proper spaces of your invoice. Just change the space, tab and lines to fit your own invoice in this program.

The application of sales taxes will vary by state. I would urge you to contact your local state sales tax office. This program calculates the sales tax on the cost of the freight and includes it in the sales tax. Line 1060 contains the sales tax calculation on the freight.

1060 M1=(T-D1+V)*TR

This line includes sales tax on freight.

1060 M1=(T-D1)*TR

This line excludes sales tax on freight. Tax is calculated on the net amount (total amount less discount, if any).

For those of you who do not want to type in this program, please send me a formatted disk from your 1541 disk drive, along with a self-addressed, stamped return mailer and a check for \$5 to cover copying costs, and I'll mail a copy to you. R

Address all author correspondence to Edward S. Wozniak, 1705 Peacock Blvd., Oceanside, CA 92056.

TYPING TUTOR + WORD INVADERS

REVIEWERS SAY:

"This is the best typing tutor we have seen yet;★★★★" **INFO-64**

"Computer aided instruction at its best." **Commander**

"This is an excellent program that makes typing practice an enjoyable pastime instead of boring drudgery."

DILITHIUM PRESS

Rated the BEST educational program for the VIC 20

Creative Computing

CUSTOMERS SAY:

"... delighted with my son's progress ... he is the only one in his second grade class who touch types at the computer."

"Your Typing Tutor is an excellent program ... our 4 children literally wait in line to use it."

"Thoroughly satisfied, can't believe how fast I've learned to type. I've never typed before."

In daily use by schools across the USA.

COOMODORE 64 THE RECIPE BOX

Now you can easily store and recall your favorite recipes on your Commodore computer. THE RECIPE BOX is a complete menu-driven disk system that comes with these additional features:

SEARCH BY INGREDIENT—Only have a pound of hamburger in the freezer? Let THE RECIPE BOX show you all the recipes that you have on file that use hamburger, or any other ingredient you choose.

SEARCH BY CATEGORY—Code your recipes as to breakfast, lunch, dinner, snacks, etc.

SEARCH BY CATEGORY/INGREDIENT—Any combination of the above.

AUTOMATIC MEASUREMENT—THE RECIPE BOX will automatically scale up or down the amount of ingredients you need according to how many servings you want.

SCREEN OR PRINTED OUTPUT—Have printed copies to use in the kitchen or give to friends.

THE RECIPE BOX requires one disk drive and an optional 1521 compatible printer. Send check or money order for \$19.95 to:

"Now Your Commodore 64™ Can Print Like a Pro!"

Grappler™ 
Printer Interface

The Revolutionary Printer Interface for the Commodore 64™

A New Era in Commodore Printing Power.

Grappler CD offers the first complete answer to your printer interfacing requirements, with many powerful capabilities unique in the Commodore marketplace. Complete signal translation allows many popular name brand printers to operate perfectly with the Commodore 64, or to imitate Commodore's own printer. Even Commodore's graphic character set can be reproduced on Epson, Okidata, Star, ProWriter and other popular printers.

Exclusive Grappler CD features provide a variety of graphic screen dumps, text screen dumps and formatting. No other Commodore interface can offer this.

If you own a Commodore 64...

If you're serious about quality, trouble free printing... You need the Grappler CD.

Contact your nearest Commodore dealer or call Orange Micro for a dealer near you.

A Uniquely Intelligent Interface:

- Prints Screen Graphics Without Software
- Graphics Screen Dump Routines Include Rotated, Inversed, Enhanced and Double Sized Graphics.
- Full Code Translation From Commodore's PET ASCII to Standard ASCII, the Language of Most Printers.
- Complete Emulation of the Commodore 1525 Printer for printing of Commodore's Special Characters.
- Dip Switch Printer Selection for Epson, Star, Okidata, ProWriter and other popular printers.
- Conversion Mode for Easy Reading of Special Commodore Codes.
- Text Screen Dump and Formatting Commands
- 22 Unique Text and Graphics Commands

KARTRIDGE KRACKER

NOW you can own this unique and powerful tool which will allow you to dump the contents of 8K and 16K cartridges onto disk! But what's really great is that you can also RUN the cartridges programs without plugging in the cartridge! The KRACKER gets YOU INSIDE the cartridge! Put all your favorites on disk and get rid of the clutter. This package provides your with the software and hardware needed to get started. Program on disk included. (Some cartridges require use of external RAM not included)

\$44.95

SOFTWARE PROTECTION HANDBOOK

3rd Edition

THIRD EDITION! NOW AVAILABLE!

If you're tired of being harassed by protected software and too many copy programs, then this is the book for you! This 224 page manual covers the gambit from legalities to protection methods to step-by-step back up procedures. Now you can learn both how to protect and unprotect software! The techniques covered include copying cartridges to tape or disk, tape protection, and disk protection. Disk protection covers error no.'s 20, 21, 22, 23, 27 and 29 plus single track formatting, header modification, header swapping, half track reading and writing, reading and writing modified bit densities, formatting illegal tracks/sectors, sync writing and more! The Third edition explains, tells how to detect and how to write them with included software. Eleven useful utilities and many protection listings! Our disk analysis programs reveal the protection methods used on your originals. A diskette with all software is available for a minimum extra charge. This may not be the only book your should have for the C-64, but it is certainly the one book you should not be without!

- Easily installed in Minutes

APALLO COPIES IT ALL

APALLO Does it All. This program is the latest generation of copy programs. It will do everything the \$39.00 and \$49.00 programs will do and **more.** It Copies **ALL** drive errors, bad tracks and sectors, non-standard format, bad syncs, and half tracks. We feel this is the best program of its kind available...

\$29.95

MSD Sure Copy

At last a complete utility package for the MSD Dual Drive. **This is the first MSD utility program that does it all.** The main menu options include:

- Copy Protected Disk
- Copy Files
- Format a Disk
- Change Disk Name
- Quit
- Copy Unprotected Disk
- Scratch a File
- Rename a File
- View Directory

\$39.95

Sure Copy will put all errors automatically on disk: 20, 21, 23, 27 and 29's.

D-CODER

- Translates any machine language program into easy-to-read English descriptions with complete explanations of each command!
- Makes complete notations of all important memory locations accessed by the program! (SID, VIC, MOS, KERNAL, etc.)
- Gives you three ways of accessing programs:
 - 1) Will read and list programs from DISK
 - 2) Will read and list programs from MEMORY!
 - 3) Direct user input (from magazines, etc.)
- Can be used to locate and examine any machine language program's protection routines!
- Can be used to easily break apart machine language programs for study and examination!
- Printer option for complete hard copy listings!

You no longer need to be an EGGHEAD to read Machine Language.

\$19.95

N-CODER \$19.95

the machine language manipulator...

The perfect companion program to D-CODER!

Allows you to easily make changes in machine language programs... right on the disk!

- Rewrite ability allows code to be altered and then rewritten directly to the disk!
- Features sector-by-sector scrolling assembly language display of machine language programs!
- Notation of ASCII text equivalents for easy spotting of embedded text strings!
- Handy reference display of all assembly language commands and their ML numerical equivalents!
- Byte splitter for easy splitting of decimal addresses into low byte-high byte format!

C-64 Label Maker

Choose one to one million labels...

\$14.95

- On-line Instructions
- Allows Fall Editing
- Works with all Standard Printers
- This Program will even put your Disk Directory on Labels for you

Software Submissions Invited.

This miniature spreadsheet program handles 100 entries in a 10 × 10 grid, plus column and row headings, and is useful for calculating small tables of numbers.

MINI-CALC

As listed here, this program will only run on the VIC-20 with a Super or 3K expander. I wanted to include a stripped-down version for the 3.5K VIC, but there just wasn't enough memory.

The Format

To see the program's format, look first at Table 1.

Mini-Calc is set up just like this. When you view it, however, its appearance is slightly different.

When run, it first deletes the lines holding the Data statements (this part utilizes the *dynamic* keyboard and will be seen on the screen). It then prompts you to input row names and column names, which stay the same throughout the rest of the program. Next, "LOAD DATA?" appears. When you first run the program, press N in response, since a datafile has not even been created. After this, the screen is set up with the title (and other information) at the top and four "windows" below.

The spreadsheet is now ready. It displays the first five row names you typed in and fills all columns with

zeroes. It also shows the first four column names (in blue).

To avoid any misunderstanding, columns are vertical and rows are horizontal. A row total is just a sum of all numbers in that row; likewise, a column total is the sum of all numbers in that column. The totals cannot be edited like the other numbers and are automatically updated as you work with the spreadsheet (you will see this later).

The first window holds columns A and B, while columns C and D are below in the second window. The bottom left window holds the row names, while to the right are the row totals. Below each column should be printed, in reversed black, a column total.

To see those rows not immediately visible, press the space bar. To scroll back, use the L key.

To view those columns not immediately visible, press the > and < keys; you needn't use the shift key with them. Moving to the left and right might look a little weird because I used the same assembly-language routine that I used on the up

and down movement. Don't worry, though; everything is in its proper place. Just remember that the names and totals at the bottom correspond directly to the other numbers exactly the way you see them.

For example, the row name at the top of the bottom left window (and the total on the other side) is in direct relation to all numbers at the *top* of the other windows.

Entering Numbers

Now that scrolling and viewing the numbers is clear (I hope), let's enter some numbers. Press the £ (British pound sign) key, and a little window will be displayed next to "< --data entry."

Also, the *simulated cursor* (a black square) has moved from the word "scroll" to the first window. The cursor is your guide to whatever you're doing on the screen. If you want to scroll through the numbers, you must position the cursor at the word "scroll." If you want to enter numbers, you must position it beside the number you want to change and so on.

Now, type in any number, care-

RUN It Right

VIC-20
3K or Super expander
Disk drive

VICTREE™ The Mighty Oak

Created for COMMODORE 64 and VIC-20 users by a programmer named Robin.

This remarkable device lets you branch out on your versatile Commodore machines. The VICTREE makes BASIC basic with its coordinated hardware and software package. Access your disk and debug your programs faster. The VICTREE contains the most convenient versatile programming aid package that you can get in personal computers today.

Just plant your VICTREE cartridge in the cartridge port of your C-64 or VIC-20 machine. You'll reap a harvest of programming benefits. And that's a lot of crop!

42 Added Commands

The VICTREE lets you take full advantage of the Disk Operating System in your 1541 Disk Drive. It gives you key BASIC disk and file commands that you could not otherwise get without much greater expense. Here's a small sample:

The DIR command immediately reads the disk directory while leaving the computer's memory completely untouched, and without disturbing whatever program you're working on.

Additional disk commands are:

CHAIN, EXECUTE, MERGE, SEND, USE, CONCAT, OPEN, CLOSE, RECORD, HEADER, COLLECT, BACKUP, COPY, APPEND, DSAVE, DLOAD, DIRECTORY, RENAME, SCRATCH, CATALOG, INITIALIZE.

Other Popular Features

VICTREE has 15 commands that permit the greatest program writing and fixing ease. For writing, the toolkit of commands includes: AUTO, DELETE, RENUMBER, MERGE, LCOPY, PAGE, HELP, DUMP, TRACE, KILL, KILL SAVE. The VICTREE allows most BASIC 4.0 programs, especially those for the older PET machines, to work on your Commodore 64 or

VIC-20. And for only \$20 extra VICTREE comes with a cable that roots you into almost any of the popular Centronics parallel standard printers on the market today.

The VICTREE Keeps Growing

This carefully protected cartridge even has a very simple text editor that allows brief documents to be entered and printed out. We recently grafted a "Print Using" BASIC command onto it. The 1984 VICTREE features a new switch, too, that turns the cartridge off and restores all the memory.

VICTREE VT64X Cartridge C-64 \$ 89.95* \$79.95
 VICTREE VTFC64 Cartridge VIC-20 109.95* 99.95
 VICTREE VT20X Cartridge VIC-20 88.95* 49.95
 VICTREE VTFC20X Cart & Cable 109.95* 69.95

A Real Sleeper:

The Skyles Electric Works PrintCable™ that interfaces your Commodore 64 or VIC-20 to all popular printers (see pgs. 8 and 9 for more info on printers). Besides offering an absolutely amazing lowest cost Centronics style parallel interface when used with VICTREE and most programs, PrintCable may be used directly with many popular programs.

A partial list of programs that appear in this catalog includes:

VICTREE includes: see page 5
 BUSIDATA 64: see pages 6, 7
 Omniview: see page 11
 Superbase 64: see page 10
 MIKRO 64: see page 11

A printer interface that appears in this catalog at an amazing low price.

PrintCable 64, C-64 \$29.95*
 PrintCable 20, VIC-20 29.95*
 programs named above 19.95*

*There is an additional \$3.50 US and Canada, \$10.00 Europe and Asia, shipping charge per order. California residents add sales tax.

So many cartridges, so little space...

Skyles Electric Works to the rescue, with our 2+1* and 4+1* expansion boards for the C-64. Briefly the 2+1 gives you 2 vertical and 1 horizontal fully switchable cartridge ports. The 4+1 continues the tradition with 4 vertical and 1 horizontal cartridge ports. See the back cover for more details.

Skyles 2+1 Expansion Bd. C-64 \$49.95*
 Skyles 4+1 Expansion Bd. C-64 \$89.95*

Skyles Catalogue Page 2

FOR COMMODORE 64 AND VIC-20 OWNERS ONLY:

This is just 1 of 15 pages of the newest and biggest Skyles catalog, hot off the press.

We know you'll want this page, in its full 7 x 10 splendor, and another 14 pages of peripherals, software and books that will make your Commodore 64 or VIC-20 computer even nicer to live with.

So, if we missed sending you your very own copy within the last few weeks, call us at (800) 227-9998, unless you live in California, in which case call (415) 965-1735.

	Col. A	Col. B	Col. C	Col. D	Col. E	...	Col. J	Total
Row 1								
Row 2								
Row 3								
...								
Row 10								

Table 1. Sample format of Mini-Calc spreadsheet.

Range	Description
110-210	Screen setup (windows, text, etc.).
390-460	Main control routine. Sends control to appropriate routine depending on key being pressed.
620-690	Scroll routine. Machine language pushes everything up, next information is then printed at bottom of each window.
700-750	Scroll routine. Same as above except in reverse.
800-810	Dynamic keyboard delete.
1010-1190	Data for storing machine language routines.
1200-1230	Input for row and column names.
3000-3030	Column total update after formula calculation.
4000-4040	Printing of appropriate columns and totals after formula calculation.
6000-6505	Formula entry routine. Allows only valid formula.
6510-6800	Numeric entry for independent variable (N), which can be included in formula.
6830-7115	Actual formula calculation on result column. Row totals updated accordingly.
9000-9017	Tabbing routine. Strings set up to position numbers. Other variables used for machine language decimal alignment, simulated cursor and so on.
9020-9075	Numeric Entry routine. Used for entering or changing numbers in spreadsheet. Row and column totals updated.
10000-10010	Checking routine. Assures viewing eight columns only.
10011-11000	Routine used to print adjacent columns for viewing.
16000	Save and load Datafiles routine.

Table 2. Line ranges for each module.

Key	Effect
Space bar	Scrolls rows upward.
L key	Scrolls rows downward.
< key	Moves to adjacent columns toward column A.
> key	Moves to adjacent columns toward column J.
£ key	Enters number into spreadsheet. Also skips over numbers if desired.
+ key	Places cursor at top of next column.
↑ key	Places cursor at "home" position for formula entry or change.
£ key	Forces a Return over formula or variable N. Nothing is erased, and formula and variable showing are used.
↑ key	Forces a Return over formula, but clears out everything to the right of cursor.
S key	Saves spreadsheet.

Table 3. Key operations for Mini-Calc program.

fully. If you type a number larger than six digits before the decimal, the program will accept only the first six digits and enter them automatically. Likewise, only two digits after the decimal point are accepted and entered. This assures that the number has only two decimal places and is no higher than 999999.99. The negative range is up to -99999.99 (this is usually high enough for most uses).

If your number was within range, such as 22, 35.7 or -497.2, then hit the £ key to enter it.

After the number is entered, the cursor moves down one space, ready for another entry. If you want to skip over numbers, just hold down the £ key. When you do this, you'll notice that the cursor travels through each column of numbers and back to the word "scroll." Thus, to move to any number and to enter a number, you

only have to use one key, the British pound sign.

If you make an error when entering a number (for example, if you enter something like .5.65 or 5.6-7), the program will usually enter 0.

Another note about the automatic entry after typing two numbers past the decimal: If you want to enter whole numbers, you may type the decimal and two zeroes, and they will enter without hitting the £ key. Also, as you enter your numbers into the spreadsheet, you'll notice column and row totals being updated.

Formula Entry

Now, on to the matter of formula entry. To enter a formula, the cursor must be situated beside "scroll." Next, hit the ↑ (up-arrow) key, and the cursor will move to the home position, lying on the A. Now, you can enter any formula you choose. The format of the formula is as follows: The quantity in the result column equals any column or the letter N (*, /, -, + or ,) any column or the letter N.

Using this format, the steps for entering the formula are as follows:

Step 1. Type in any letter A through J. This is where the result of the calculation is stored.

Step 2. Type in the = sign.

Step 3. Type any letter A through J or the letter N.

Step 4. Type any of the five operators: * / - + ,.

Step 5. Type any letter A through J or the letter N.

Steps 1, 2 and 3 will always be followed. In other words, you can't have a formula such as "B =". Steps 4 and 5 can be repeated until the space provided fills up.

Therefore, you can have a formula as simple as "A = B" or as complicated as "A = B*C/H + N". The calculations are done in the order that they appear in the formula and *not* in the usual (*, /, +, -) order that some versions of Basic incorporate. Also, you may have noticed in step 4 an unusual operator—the comma. This character performs exponentiation and will be explained later.

After formula entry is complete, hit the ↑ key. The cursor will move down next to "N =". The formula is entered but will not actually take effect until the variable N is entered. This is any number that you may want included in the formula; however, instead of typing something like "A = B*C + 2.06", you would type "A = B*C + N". Then, when the cursor drops down

Info Designs™... Making Home Town Business Grow

Info Designs is the leading producer of accounting software for the Commodore 64... home town businesses made us **Number 1**. We specialize in Accounting Software and market only the highest quality business systems. Our integrated systems have helped businesses become more prosperous through better management of their money and resources. Info Designs five accounting packages make it possible for you to computerize your business cost effectively. Our proven business software packages have been purchased for \$595 each. With **100,000** programs sold, you can be assured of a proven value at **\$79.95** per Commodore-64 program.

Info Designs™

next to the "N=" on the screen, the value "2.06" would be typed.

After you have entered a value for the variable N, use the \pounds key to initiate the formula. In a few seconds (usually), the results of the calculation will show on the screen, and the cursor should be positioned back at "scroll."

Other Features

There are some other features of the spreadsheet I should mention.

First, I stated earlier that no number larger than 999999.99 can be entered. If, however, the program enters a number larger than this as a result of a formula calculation, the number entered would be 999999. If you see this after a formula entry, you'll know that the number calculated was too high to be displayed.

Another number, which you will probably see more often, is 100000. Again, the program will enter this after a formula calculation if a certain condition exists—division by 0. As you probably know, computers will not divide by 0. If a program tries this, you get an error message (the same way a calculator displays a row of Es).

To avoid this error message, which would stop the program, I wrote the instructions so that a division-by-0 condition is skipped over, and the number 100000 is entered.

The last feature is the Disk Save routine. When you have finished working with your spreadsheet and are ready to quit, press S. Type in your filename and press the return key. Your spreadsheet will be completely saved to disk and the program will end.

Additional Remarks

Now that I've covered just about everything you need to know to put the spreadsheet to work, I would like to add a few minor points.

If you realize you typed in a wrong number for N in your formula, there is a solution. If you hit the \uparrow key, this will place the cursor back to the home position. Now you can type the right formula, hit the \uparrow key and type another number for N.

Also, another editing feature to use is the \pounds key. After typing the formula, the \uparrow key erases any remains of the "old" formula. Using the \pounds key instead does not erase anything. This is useful in changing just part of a formula.

If you want to advance through the columns, you can press the + key

A Spreadsheet Example

I thought it might be helpful to briefly run through a typical spreadsheet application. You will no doubt come up with better spreadsheets than this, but it does show the usefulness of a program like this when calculating columns of numbers. Also, I will try to tie up some loose ends, especially the use of the comma (,) as an operator.

A money-management book I recently purchased included a table showing the possible effect different inflation rates could have on a typical household budget. I have created a similar table below, which will be used as our spreadsheet example.

	\$ AMT PER YR.	% OF BUDGET	6% INFL.	10% INFL.	15% INFL.
HOUSING	3000				
FOOD	1800				
CLOTHING	1500				
TRANSPTN	850				
UTILITIES	800				
ENTERTNMT	800				
MED EX.	700				
HOUSE MAIN.	580				
SAVINGS	900				
MISC.	400				

You'll notice that only the first column is filled with numbers. These are the only ones that need to be typed. The other columns will be generated via formulas.

First, run the program. Next, type N after the question "LOAD DATA?" and then start entering the row and column names. It's probably best to enter these names in the same order as seen in the chart, but any order will work. Also, the program only accepts 7 (column) or 9 (row) letters in a name, so try to abbreviate.

When the screen is set up, enter that first column of numbers under the "\$ AMT PER YR." column. Here is where the order of entering data is important. You may remember I stated earlier that any column of data corresponds directly to any other data according to screen position. This means, for example, that if the name "CLOTHING" is three rows down in the bottom left window, then its corresponding data should be typed in at the third row of its window. I stress this point only because it is important to get a feel for what corresponds to what as you scroll through different columns.

Now it is time to let the program create the rest. Simply type in the following formulas with their corresponding "N=" values in the same order as they are listed.

B = A/N	B = B*N	F = N	C = N,F*A	D = N,F*A	E = N,F*A
N = 11330	N = 100	N = 20	N = 1.06	N = 1.10	N = 1.15

The first and second formulas merely fill column B with a percentage breakdown of the various household expenses. This isn't particularly necessary for this example but may prove useful sometimes.

The third formula stores the number 20 into all of column F (this is a handy way of filling columns with a certain value).

instead of the British pound sign. The difference is that hitting the + key will immediately move the cursor to the top of the next column. This feature is especially handy when, for example, you're changing a number in the first column and then moving on to the word "scroll." Here, all you do is hit the + key four times.

Technical Notes

Included with the program listing is a disassembly of the three machine language routines (see Listing 2) that control the vertical scroll and the number aligning within the windows.

Also, there is a list of line-number ranges for each module of the program (see Table 2) and a chart that reviews which key to press when using the spreadsheet (see Table 3).

The machine language routines are probably the centerpiece of the whole program. Without them, I think that the ability to easily view any number within the matrix would have suffered. I won't go into the workings of these routines except to give a brief description.

The two scroll routines are almost identical. The only difference is that one works somewhat in a reverse

Formulas 4, 5 and 6 are the real workhorses. They are responsible for storing columns C, D and E with the inflated values using percent rates of 6, 10 and 15, respectively. You'll notice that the value for "N=" changes for each rate.

The method for calculating columns C, D and E is based on the general compound-interest formula given below.

$$FV = PV * (1 + i)^N$$

where:

FV = Future Value

PV = Present Value

i = Interest (or inflation) rate

N = Number of periods (or years)

As with any mathematical problem, the expression inside the parentheses is performed first. This is why the "N=" values in the example are set equal to 1.06, 1.10 and 1.15 (1 plus .06, .10 and .15 inflation rates). Next, these values have to be raised to the power of the number of periods (N), or 20 years (column F). Please note that this is accomplished by using the comma as an operator in the "N,F" part of the last three formulas. After this, you multiply by the "Present Values" that were typed into column A. (Thus, the complete formula—Result Column = N,F*A.)

For those of you who may be rusty on your math, another way to express "N,F" is $N * N * N \dots 20$ times. Since it wouldn't be very convenient to have to type in something this long, you can see the reason for having an exponential operator. In other spreadsheet programs (and most versions of Basic), this operator is represented by the \uparrow character. The coding scheme I used in this section of my program did not lend itself well to using this character, so I used the comma character instead.

The purpose of my example is mainly to show you that spreadsheets have many uses. These "what-if" guessing games seem to be most interesting.

As I stated elsewhere in this article, the operations in a formula are executed left to right (parentheses cannot be used). This was the reason for typing the formula as N,F*A instead of A*N,F. The latter would have multiplied column A by N and then raised this result to the power of column F (20).

This final result would not only be erroneous, but would produce numbers so high that the VIC would break out with an Overflow error message. Generally, such an error will only occur by misuse of the exponential operator (comma). A partial solution is available: simply clear the screen and type:

```
GOTO16000
```

When asked for the datafile name, type it in.

This will start saving your data to your disk. Afterwards, the program will end. As I said, this is only a partial solution. You will have to reload Mini-Calc and bring in the datafile you just saved.

manner from the other. In a scroll, you're either "pushing" everything in the windows up one space or down one space. You do this by loading the accumulator with information from a screen address, using a register (X or Y), then storing that information into the screen address directly above or below, using another register.

Both registers are then incremented or decremented (depending on what scroll you're using), and the next screen address is loaded into the accumulator, repeating the process. Of course, with each routine (up or down), this is taking place on all four

windows almost at the same time.

The third machine language routine is responsible for aligning the numbers within the windows. I tried many other methods of doing this in Basic using string functions, and I found just one solution. This solution is used in printing the column totals but cannot be used with the other numbers because of speed requirements and other reasons.

This machine language routine aligns numbers simply by finding an offset. First, Basic prints the number at a position determined by which number in the spreadsheet is being

changed (or entered). Then the machine language routine is called. This routine searches through the screen locations where the number has been printed, looking at each location and counting until it finds either a space (code 32) or a decimal (code 46). When either one is found, the number of its location is subtracted from 7. The result of this subtraction is then used to shift the number over that many locations.

For example, if the number was 35.8, then the decimal is found at the third location. Three subtracted

■

Row and column totals are automatically updated as you work with the spreadsheet.

■

from 7 is 4, which means that the number must be shifted over four screen positions. Seven is used because the decimal is to be lined up at the seventh position from where it was originally printed.

One last technique that I think could be useful in any program is the Delete routine. It starts at line 800. Using the dynamic keyboard, it prints the line numbers that hold the Data statements and forces a carriage return over them (you can see this taking place right after typing RUN). This idea was harder to put into practice than I thought.

Originally, I had set the variable LN equal to the first line number to be deleted. After the first deletion, the program was to increment LN so that the next line could be deleted. It wouldn't work. It seemed that after the first line was deleted, all variables were reset to 0, including LN. Because of this, I changed the program so that LN would be incremented on the screen just as if it were being typed in Direct mode. This solved my problem.

Of course, these Data statements hold the machine language portion of the program and are Poked into the cassette buffer before deletion.

HOT ACCOUNTS™

The most highly acclaimed
bookkeeping system
for the Commodore 64®

Superb!
An exceptional program that
outshines all others.

RUN Magazine, Nov. 1984

HOT ACCOUNTS™ teaches you bookkeeping as it automatically performs dozens of full-service accounting functions. It is a complete system that will instantly organize your records and receipts and supply charts, formal statements, and budget information. Now your records can be accurate, up to date and confidential. ■ Tracks charge cards, checkbooks, all transactions ■ Requires no prior knowledge of accounting ■ Home or small business ■ Improves your financial image ■ Cost less than 1 hour with a C.P.A.

HOT ACCOUNTS™ Bookkeeping System on Diskette

For **RUSH** delivery, send check or money order for \$64.95 to:

Computer Ed. Software
1002 Brookes Ave. W., Ste 100
San Diego, CA 92103

Credit card orders, call toll-free
1-800-621-0852 ext. 238

VISA MASTERCARD

P.S. Use **HOT ACCOUNTS™** to do your taxes and the price is tax deductible!

BONUS OFFER! Order before April 15th and receive a full featured, 60 function word processing & 3-D business graphics package as our **FREE** gift to you.

On Screen Status Display

- A - Cursor location
- B - Scroll Indicator
- C - Print features currently being used
- D - Filename of text
- E - Percentage of RAM (memory) used
- F - Ruler (also message line)
- G - Word wrap/justification flag
- H - "Block marked" flag
- I - Insert mode flag
- J - Characters per inch
- K - Number of the current font
- L - Name of the current font

Overview of FONTMASTER word processor features:

- 1) Powerful block manipulation commands (Cut, Paste, Move, Overlay).
- 2) User - friendly effects include (fonts, super/sub scripts, underlining, bold face, etc.)
- 3) Up to eight different fonts can be used simultaneously.
- 4) Many printing options such as page numbering, titles, word-wrap, right justification, and more.
- 5) Eight disk I/O commands (Save, Load, Verify, Erase, Etc.).

Create Your Own or choose from over 15 type styles provided in this unique program.

Including: Bauhaus English Шадонь Manhattan
Block Italic Stop Script
Bold Hairpin BYTE Stopbold
Pudgy Mirror umorepisdh i04cT0Σ

SIXTH SENSE™**The Thinking Terminal!**

The *Ultimate* home modem software for the Commodore 64! **YOU** control its actions, **even when you're not home!** Here is the software that makes contact with remote computers, gathering and dispensing information in a discretionary manner following your instructions. And its sophistication makes it easier to use than other modem programs! Up and download with ASCII, CompuServe B, and XMODEM protocols. Other protocols may be added. 700 line **Virtual Screen**, **split-screen** line input, **macro language**, flexible data routing, high-speed operation and many other capabilities give you greater control at better performance than you thought possible with your Commodore 64. With **SIXTH SENSE**, you can compress hours into minutes, freeing your other five senses for more productive and satisfying activities. Discover the power of computer communications at its best!

Mr. Computer Head

With this program, children can have fun altering the features of Mr. Computer Head in 3125 different ways.

By **GEORGE DECKER**

My children wanted a game that was fun to play and didn't keep score, so I created Mr. Computer Head, a game for children of ages two through five.

Mr. Computer Head starts out as a featureless head on your screen. Beneath the head is a menu displaying five configurations each of mouth, eyes, ears, nose and hat. A pointer moves across the screen and pauses at each facial feature. When it is pointing to the feature you want, press the space bar. The pointer will then pause at each of the five varia-

tions of your chosen feature. When the pointer reaches your selection, press the space bar again. This feature then displays 15 colors, one at a time. When you reach a desired color, press the space bar.

Now the facial feature and its color will appear in the appropriate place on the head.

The pointer continues moving across the screen to the remaining headings, and you repeat the selection process to complete the face.

To bring Mr. Computer Head to

life, press the f7 key. Each facial feature will wiggle in turn (Mr. Head will even stick out his tongue).

If you would like a copy of this program (tape only) without having to type it in, send me a self-addressed stamped envelope, a blank tape and \$3. 

Address all author correspondence to George Decker, 251 N. Luzerne Ave., Baltimore, MD 21224.

Listing 1. Mr. Computer Head program.

DiskMaker

with
MasterKey

**99%
EFFECTIVE**

THE AUTOMATIC DISK BACKUP SYSTEM FOR YOUR 64 & 1541 DRIVE!

- Actually copies a FULL disk in only 4 MINUTES!
- Easiest to use – TOTALLY automatic copy utility
- State of the "ARTS" copy capability!
- UNLOCKS protected disks for backup copying
- Breaks through LATEST protection schemes
- Includes FAST copier, "ARTS" copier and TRUE Nibbler: you get 3 copiers for the price of 1
- HALF-TRACKING up to & including track 40!
- 100% machine code for fast, RELIABLE operation

- 4 min. copier AUTOMATICALLY puts "errors" on copy
- Fastest & most advanced copier you can buy
- Writes errors 20,21,22,23,27,& 29 WHILE COPYING!
- Transforms your 1541 into a SUPER-FAST copy drive!
- NO analysis required, just swap disks & NO damaging drive knock during errors or format
- Formats AS IT COPIES, detects & reproduces NON-STANDARD formats & I.D. mismatch, DOS flags
- PRODUCT SUPPORT tel. #, revisions, & upgrades

OVER 500% FASTER THAN OTHER COPIERS!

“My purchase of RUN is a better investment than my computer—I get a much higher return on a much smaller investment!”—

D. Suggs, Tallahassee, Fla.

Join the thousands of C-64, Plus/4, and VIC-20 users around the world who enjoy subscribing to RUN every month. They've found RUN to be an unrivaled Commodore resource. And they're right—RUN is one of the fastest-growing Commodore magazines on earth!

The convenience of personal delivery, plus a savings of 44% off the newsstand price are yours when you subscribe to RUN—the year-round Commodore companion.

You get 12 great issues for just \$19.97, plus special announcements and offers available only to RUN subscribers!

Each month, you'll learn the fun of computing while exploring the limitless possibilities of your Commodore.

Here's what satisfied readers are saying:

“I read many magazines after I bought my 64, but I

think that yours is the best. I now have a subscription and look forward to every new issue.”—Eric D. Stolen, Manistee, MI

“In a remarkably short time, RUN has become the best journal for Commodore computer users... I appreciate the coverage you devote to reader comments and questions (Magic, Mail RUN, and Commodore Clinic), as there is nearly always an interesting hint or tip in one of these columns!”—J. O'Hare, Victoria, B.C. Canada.

Throughout the year, you'll find:

- Exciting tips, Commodore tricks, and programming ideas in RUN's most popular column, “Magic”.
- Challenging, fun, and educational software.
- A rundown of the products best suited for the new C-16 and Plus/4.

The benefits roll on... time-saving programming ideas, no-punches-pulled product reviews, applications to broaden your computing horizon, tutorials and assistance from renowned authors in the Commodore field, and of course, great ideas and tricks that have worked for fellow Commodore users.

Act today—and save 44%—joining the thousands of subscribers who've found that RUN is their best computing companion. Just send in the coupon or insert card, or call TOLL-FREE 1-800-258-5473. In NH, dial 1-924-9471.

Commodore 64, VIC-20 and PLUS4 are registered trademarks of Commodore Business Machines, Inc.

YES! I want to make a great investment.

Send me 12 issues of RUN for the low subscription price of \$19.97. I'll save 44% off the newsstand price.

MAKING FACES

By RICH BEACHLER

Like many other Commodore owners, I moved up to the Commodore 64 after starting out with a VIC-20. When I did so, I turned my VIC-20 over to my four-year-old daughter, Aleda.

While there is a wealth of commercial educational software available for the Commodore 64, there is a real dearth of VIC-20 programs, especially those aimed at preschool aged children. Almost all of my daughter's programs come from magazines such as *RUN*.

To add to this scant supply of VIC-20 software for preschoolers, I decided to write an interactive, non-competitive, nonsexist game that would make use of the VIC's custom graphics capability. The result is *Faces*, and I am pleased to say it has become Aleda's present favorite.

Entering Faces

Faces is in two parts. Type in the first part and, before running it, save

it with the name "Faces Loader." If you don't first save this program, it erases itself, after running, to make way for part two.

If you are using disk, make the following change to *Faces Loader*:

```
200 PRINT"{CLR}{2 DN}LOAD"CHR$(34)
      "FACES"CHR$(34);"
```

Type *NEW* and type in the second part. Save it with the name "Faces." If you are using tape, *Faces* should be saved immediately following *Faces Loader*.

Please note that *Faces* uses all the available memory in an unexpanded VIC-20. Do not type in any spaces except for those inside quotes! Also, it will only run on an unexpanded VIC-20, so remove or disable any memory expansion.

How to Play

Load and run *Faces Loader*, which, in turn, will automatically load and run *Faces*. I added some flashing

words and scrolling colors to the character-loading section of the program. That way, your child can enjoy watching something happen while data is being loaded, rather than staring at a "Please Wait" message.

Soon, a face with a small menu below it will appear, and a very short melody will play. To change any of the facial features listed in the menu, you need only press the appropriate number key. When a choice has been made, a new menu will appear.

If you choose to change the hair, the menu will ask for a choice of style 1 or 2. (The style you see when the program begins is style 1.) After a style has been chosen, the menu will ask for a choice of hair color. To make a selection, you must press the number key corresponding to the number in the desired color. The face will be redrawn with the new hair style and color. The original menu will reappear, and the short tune will play again.

Let's face it, there aren't that many unexpanded VIC-20 programs for preschoolers. Here's one that is not only easy to handle, but also provides your child with hours of pleasurable and creative activity.

If you choose to change any other facial features in the menu, the new menu will instruct you to press the space bar to change, whereupon the change in the chosen feature happens immediately. Continuously pressing the space bar causes the feature to keep changing. When you are satisfied with the choice, press the return key to bring back the original menu.

All the choices have helped my daughter learn to recognize the names of the features and the correct keys to press. She also has found some favorite program features of her own (such as holding down the space bar when changing the eye color, causing the eyes to blink).

If the player chooses the Quit option, all the correct memory pointers are restored, and typing NEW prepares the VIC for any new program.

How It Works

I have redefined the first 64 characters in the character set. (And I use

all 64 of them!) They are stored in locations 7168 to 7679. Poking location 36869 with the value 255 tells the VIC to look for its 2048-byte character set, starting at location 7168. This causes the unexpanded VIC's character set to wrap around into read only memory (ROM). The VIC then sees normal (nonreversed) characters where it would normally see reversed characters. It is then possible to print a message with normal characters by using the CTRL and RVS-on keys.

The hair and the outline of the face are drawn using Print statements. The letters in the Print statements have all been redefined and appear as parts of the face.

The rest of the facial features are poked to the screen. This allows their immediate change without redrawing the entire face. The eyes and nose use two custom characters each. The mouth uses six characters.

Since there was no room for REM

statements in the main program of the VIC-20 version, I will give you a brief program outline.

Lines 10-40. Set variables and strings
Lines 100-240. Draw face and hair
Lines 250-295. Print main menu
Lines 300-350. Change hair
Lines 400-495. Change eyes
Lines 500-540. Change nose
Lines 600-680. Change mouth
Lines 700-770. Sound subroutines
Lines 800-830. Input subroutine
Line 900. Erases menu subroutine

I hope you (and any young friends of yours) find this program enjoyable! If you want to save the trouble of typing it in, send me a stamped, self-addressed envelope, a blank tape and \$3, and I'll make you a copy. 

Address all author correspondence to Rich Beachler, RR #2, Boone, IA 50036.

Circle 8 on Reader Service card.

**Break
the
BASIC
language
barrier**

VIDEO BASIC-64 — add 50+ graphic and sound commands to your programs with this super development package. You can distribute free RUNTIME version without paying royalties! **\$59.95**

BASIC COMPILER-64 — compiles the complete BASIC language into either fast 6510 machine language and/or compact speedcode. Get your programs into high gear and protect them by compiling. **\$39.95**

MASTER-64 — professional development package for serious applicants. Indexed file system, full screen management, programmer's aid, BASIC extensions, 100 commands. **\$39.95**

PASCAL-64 — full Pascal with extensions for graphics, sprites, file management, more. Compiles to 6510 machine code and can link to Assembler/Monitor routines. **\$39.95**

ADA TRAINING COURSE — teaches you the language of the future. Comprehensive subset of the language, editor, syntax checker/compiler, assembler, disassembler, 120+ page guide. **\$59.95**

FORTRAN-64 — based on Fortran 77. Common, Data, Dimension, Equivalence, External, Implicit, Goto, Else If, Do, Continue, Stop, Subroutine, Call, Write, Read, Format, more. April 1985 **\$39.95**

C-LANGUAGE COMPILER — a full C language compiler. Conforms to the Kernighan & Ritchie standard, but without bit fields. Package includes editor, compiler and linker. April 1985 **\$79.95**

Other titles available: Write or call: PHONE: (616) 241-5510

For postage and handling include \$4.00 (\$8.00 foreign) per order. Money order and checks in U.S. dollars only, Mastercard, VISA and American Express accepted. Michigan residents incl 4% sales tax.

Abacus Software
P.O. Box 7211 Grand Rapids, MI 49510

\$129 PRICE EXPLOSION

The Complete Computer

Here's a 50 character per second, plain paper, dot matrix printer that you can use with virtually any home or office personal computer. It's built really tough to withstand heavy use. It's really easy to use. And, it even prints graphics. Price Slashed to \$129.

By Drew Kaplan

Complete your computer. Now you can harness the full power of your computer. From writing letters to listing programs, your computer will be incredibly more useful.

It uses plain paper and it's super reliable. It prints both upper and lower case characters. And, if you aren't using a printer with your computer, read on.

LISTING/INDEXES/LETTERS AND MORE

Experience the thrill of actually writing your letters and reports on your computer. Now you'll be able to use all of your computer's word processing and correcting capabilities to really explore your creative talents.

It's easy. Some of the new word processing programs are so 'user friendly' that you can learn to use them in just about 10 minutes. Change a line, change a word, move a line. Just push a button.

Are data bases a four letter word? Not on your life. Now you can use your computer to organize all your telephone numbers, your stocks, stamps, and recipes.

If you're using your computer for business, you can have a complete, instantly accessible file for each customer by name, what they bought, when, etc.

A data base will let you find or organize and print out any information you want, whenever you want, whenever you want.

There's no more complicated programming required. And, inexpensive data base programs are available at any computer store.

PERMANENT RECORD

If you have a modem, you're in for a treat. You can access encyclopedias, stock market reports, and much more. When you sign on a service like CompuServe or The Source, the world is quite literally at your finger tips.

With a printer, you can get a 'hard copy' of all the incoming information. You can get everything from SAT test simulations and IQ tests to loan amortization schedules.

AFRAID OF PROGRAMMING?

You don't need to know the first thing about programming to use this or any printer. But, if you've never typed in and run a program, here's the easiest one I know. Turn on your computer.

Commodore Owners, and Atari Owners, your computer, and most others will say 'Ready'. Just push Control and Reset on an Apple. Then type the following:
**10 PRINT "DAK IS WONDERFUL"
20 GOTO 10
RUN**

You should type a carriage return at the end of each line. Why not try this program now? Next time, I'll tell you how to get out of the program, and maybe even discuss peeks and pokes.

If the program isn't running, type LPRINT instead of PRINT in line 10.

To you sophisticated programmers, think how easy your life will be when you can print out program lists that you can study at length.

And, you won't have to load a bunch of disks to find a program when you print out a menu for each of your disks.

LOOK AT ALL IT DOES

An ad in several August computer magazines listed a \$149 thermal printer (that needs expensive thermal paper) as the lowest priced printer in the U.S.

Imagine a 50 character per second, plain paper, full 80 column dot, matrix printer with a built-in standard Centronics Parallel Interface, slashed to just \$129.

This printer handles plain old cheap standard fanfold pin feed computer paper from 4.5" to 9.5" wide, with its built-in adjustable tractor pin feed drive.

It's so powerful you can even use two-part forms for a carbon copy. Plus, there's an impact control for print darkness.

It understands and prints 116 upper and lower case characters, numerals and symbols. And that's not all.

You can even print Double Width characters. **And, look at this.** This printer has full graphic capabilities with 480 dot horizontal resolution and 63 dot per inch vertical resolution. So, you can print out your pictures, pie charts or graphs.

It prints 10 characters to the inch, six lines to the inch. In short, it's going to make typewriters into dinosaurs. When hooked to your computer, you'll never have to retype anything again. If you find an error, just make the correction and let the computer retype your work for you.

The printer is made by C.ITOH/Leading Edge in Japan. It's built to really take heavy use. But in the unlikely event that it should need service, there are approximately 400 service centers nationwide.

It takes standard long life inked ribbon cassettes that are readily available nationwide. This is a printer that will give you many years of continuous reliable service and enjoyment.

AND NOW THE BAD NEWS

If you're the president of a large company sending important business letters, you may want a \$1000 daisy wheel printer. But for most uses, dot matrix printers are incredibly faster, and there isn't any way to print out a graph or picture on a daisy wheel printer.

But, there are two things you need to know about this printer. First, it has about the dumbest name I've ever seen. It's built tough and rugged. So, they named it The Gorilla Banana Printer.

Second, like many dot matrix printers, the letters g, j, p, q, and y are level with the other letters. Each letter is completely and perfectly formed, but each sits level with the rest of the alphabet.

Upper case letters and symbols are unaffected. So, if you don't want letters that look like they were printed by a computer, this printer isn't for you.

But for most letters, term papers or reports, programming and all the data bases and information you'll get through a modem, this printer is perfect.

COMPATIBLE COMPUTERS

Any Computer with a standard Centronics parallel port, such as: Apple, Franklin, IBM PC, TRS80, Osborn, Atari, Commodore VIC 20, Commodore 64, Kaypro, and virtually any other personal computer. Plus, most briefcase portables.

FEAR OF INTERFACES?

Your computer is smart. But, it doesn't know how to 'talk' to other devices. That's why you need an interface.

An interface isn't just a cable. It's actually an intelligent translator that lets your computer talk to other equipment.

Usually the computer manufacturers don't include the various interfaces when you buy your computer, because they don't know if you'll ever add peripherals such as disk drives, printers or modems.

So, rather than sell you something you don't need, you don't buy an interface until you add onto your computer.

There are two types of printer interfaces. The first allows you to do text word processing. For 99% of computer use, this is all that is needed. It translates all the possible letters and punctuation known as ASCII. This printer understands 116 characters and symbols.

A second type of interface also allows you to dump pictures or graphics from your screen or memory. This is more complicated because every dot must be told where to go. This interface, or 'driver program' as it is called, is available in two forms; built into an interface card, or

conjunction with any standard interface.

Either way, you'll have the printer operating in just a few minutes. And if you already have a printer, the same Centronics parallel interface and cable (about 85% of all printers are compatible) should work with this printer.

With this printer you can alter your graphics as you desire. You can print normal or reversed (both shown above, reduced to fit in this catalog) and you can even print double size.

WHY SO CHEAP

A new model will emerge soon with a different name. Leading Edge had just 28,000 of these remarkable printers which have been selling at discount for as little as \$199, left in stock.

DAK bought them all for cold hard cash. And now we're offering them to you for less than the original price we were quoted as wholesale.

The printer is approximately 16½" wide, 9" deep and 7" tall. It's backed by Leading Edge's standard limited warranty.

ADD PRINTING POWER TO YOUR COMPUTER RISK FREE

Now you can really make use of your computer. 50 characters per second printing on plain paper for just \$129. Wow!

Now you can print out your programs, your notes or your letters. If you're not 100% satisfied, simply return the printer and any accessories in their original boxes to DAK within 30 days for a refund.

To order your 50 Character Per Second Dot Matrix, Plain Paper Printer with a built-in Centronics Parallel Interface, risk free with your credit card, call toll free, or send your check for the breakthrough close-out price of just \$129 plus \$8 for postage and handling to DAK. Order No. 4101. CA res add 6% sales tax.

Special Note: If you need a serial printer for a computer, such as the TRS80 Color Computer, order the identical printer with a built-in Serial Interface for the same price. Use Order No. 4102.

The Printer comes packaged with a long life ribbon. Extra ribbons are available at computer stores. DAK has them for \$4 each (\$1 P&H) Order No. 4103.

Standard Centronics Interfaces for your computer are available at any computer store. This Printer has its receiving inter-

face built in. You simply need one, complete with its cable, to plug into your computer 'to send' information. Below are our favorites for 5 of the most popular computers.

For your Apple. We have Practical Peripherals' text interface for just \$49 (\$2 P&H) Order No. 9877. We have their graphics capable interface for just \$79 (\$2 P&H) Order No. 4104. If you already have a Centronics Parallel Interface, we have a graphics driver program on disk for just \$7 (\$1 P&H) Order No. 4105.

For your IBM PC, you don't need an interface. It's usually already built-in. But, you do need a cable. We have a cable, ready to connect this printer to your computer, for just \$19 (\$2 P&H) Order No. 9879. We have a graphics driver program on disk for just \$7 (\$1 P&H) Order No. 4106.

For your Atari 800, 800XL, 400, or 600XL, we have a text interface for just \$69 (\$2 P&H) Order No. 9881. We have a graphics driver program on disk for just \$7 (\$1 P&H) Order No. 4107.

For your Commodore VIC 20 or 64, we have a text interface for just \$39 (\$2 P&H) Order No. 9883. We have a Graphics Interface for just \$54 (\$2 P&H) Order No. 4108.

Special Bonus for Commodore 64 owners. We have a powerful word processing program with editing, including changing a line, a word, or moving a line. Once you've tried computer word processing, you'll never want to look at a typewriter again.

Plus, we have a super data base program that lets you use 8 fields of information on up to 200 subjects at a time. Then you can search for any part, sort alphabetically or numerically and print out an address book, a list of your stocks or anything you can imagine. They're both yours for just \$5 (\$1 P&H) with purchase of the printer. Use Order No. 4122 for Disk, or Order No. 4123 for Cassette.

For most TRS80 Computers, you don't need an interface, just a cable. For the Black and White Computers, we have a Parallel Cable for just \$18 (\$2 P&H) Order No. 9885. For the Color Computers we have a Serial Cable (you need the Serial Printer as well) for just \$18 (\$2 P&H) Order No. 4109.

For briefcase-type portables, the Centronics Interface is usually built-in. Just stop by any computer store. All Centronics Printers use the same cable at the printer end, but you'll need a cable that fits your particular computer's plug.

Get hard copy print-outs of your programs or your graphics. Turn your computer into a powerful word processor. Forget retyping ever again. For just \$129 you can make your computer complete.

From p. 12.

character in line 510 will change the amount of the prompt that flashes. Once any key is pressed, the sub-routine returns with A\$ equal to the character that was entered.

Frank C. Gutowski
Cheswick, PA

\$1AF Customized Ready prompt—We have changed the C-64 operating system, so that instead of the Ready prompt, a customized message will appear. To do this, lines 10–20 transfer the basic operating system to RAM. Line 30 causes the Ready prompt to be looked for at memory location 828 rather than its usual place. Lines 40–60 put the new prompt into locations 828 on up.

```
10 FOR J = 40960 TO 49151 : POKE J, PEEK(J) : NEXT
20 POKE 1, PEEK(1) AND 254
30 POKE 42101, 60 : POKE 42103, 3
40 FOR J = 0 TO 33 : READ K : POKE J + 828, K : NEXT
50 DATA 013,010,087,072,065,084,032,083
60 DATA 072,079,085,076,068,032,073,032
70 DATA 068,079,032,078,079,087,044,032
80 DATA 077,065,083,084,069,082,063,013
90 DATA 010,000
```

If you put this routine at the beginning of some of your programs, you can have a lot of fun. Line 10 takes some time to do its work, but the results are worth it.

Those who know about CHR\$ codes can construct their own message by changing the Data statements shown here. The first two and the last three must always be as shown, but you can put any reasonable number of characters in between. The possibilities are limitless, and a lot of action can be had from very little work.

Brian Axford
Petawawa, Ontario
Canada

\$1B0 Word tricks—It's well known that shifted characters in REM statements can List in unusual ways. Having considered this quirk at length, we've created a brand-new literary form. If you run the program below, you'll see just what we mean.

When typing it, be extremely careful with the characters in the answers; a single error can ruin the entire line. In the answer lines, we've spelled out every character following the colons, since that is the most critical area. As you type, don't put spaces where they're not called for, and carefully watch your shift and Commodore keys. In the answers, all the spaces and a few of the letters are unshifted.

After typing the program, you should save it first, then run it and follow the instructions. The quotes to be deleted are those at the beginning of the answer lines.

```
100 LIST
110 REM ** COMPUTER MAGIC & TRIVIA **
120 REM
130 REM THINK OF YOUR ANSWERS,
140 REM THEN DELETE THE QUOTES
150 REM AND RE-LIST THE PROGRAM.
160 REM
```

```
170 REM Q: WHY DID THE COWARDLY LION
180 REM VISIT THE WIZARD OF OZ?
190 REM " A: {2 SPACES}{COMD @}{SPACE}{SHIFT X}
{SPACE}{SHIFT E}{COMD A}
200 REM
210 REM Q: WHO EXPOSED THE WIZARD?
220 REM " A: {2 SPACES}{COMD @}{COMD @}
230 REM
240 REM Q: WHAT DID THE WIZ SAY THEN?
250 REM " A: {2 SPACES}{COMD LB.}{SPACE}{COMD @}
{SPACE}{SHIFT B}
260 REM
270 REM Q: WHAT CAN A GOOD WITCH DO
280 REM WITH A SPORTS BROOM?
290 REM " A: {2 SPACES}{COMD -}{SPACE}{SHIFT -}
{SPACE}A{SPACE}{SHIFT R} E.
```

Louis F. Sander
Pittsburgh, PA

\$1B1 Word trick contest—If you liked the trick above, develop something similar and send it in to Magic. We'll print the best submissions, and we'll pay at our usual rates. Include the plain-text listing as well as the REM-coded form, so we can see the result without typing.

The Question-and-Answer format has lots of possibilities, as the following lines will show, but it's far from the only style. We're looking for creative use of the shifted character principle—give it any form you'd like, and send us your best results.

```
10 REM Q: WHAT DID MRS. FLINTSTONE
20 REM SAY WHEN THE FIRE WENT OUT?
30 REM " A: {2 SPACES}{COMD U}D, {SPACE}{SHIFT K}
{SPACE}{COMD K}{SPACE} A {SPACE}{COMD
C}
40 REM
50 REM Q: WHY DO LEONARD AND VALERIE
60 REM GET A'S IN COMPUTER CLASS?
70 REM " A: {2 SPACES}{SHIFT C}{SPACE}{COMD P}
{SPACE}{SHIFT E}{SPACE}{SHIFT S}{SPACE}
{SHIFT V}
```

L.F.S.

\$1B2 Defining variables—It is sometimes desirable to define Basic variables in a certain order, particularly where execution speed is critical, and we want frequently used variables to be at the top of the heap.

To accomplish this, it is not necessary to assign a value to each variable, as most programs do. Commodore Basic allows you to establish variables in order, each with a value of 0, by using the DIM statement:

```
DIM X,Y,Z,A,P1,P2
```

Although the manuals make no reference to this use, the DIM command is not restricted just to array variables.

I. Adam
Vancouver, BC

\$1B3 Random numbers, all different—This routine generates a series of random numbers, of which no two are the same. It is perfect for programs

involving decks of cards or for lottery-type programs where the restrictions do not allow for duplication. The number of elements to be selected from is A; to choose numbers ranging from 1 to 40, set A = 40. The number of selections to make is B; to draw six numbers, set B = 6.

```
20 N = 1 : DIM P(A)
25 X = INT(RND(0)*A + 1) : IF N > 1 THEN 200
30 P(N) = X : PRINT P(N) : N = N + 1
35 IF N = B + 1 THEN END
200 FOR M = 1 TO N : IF X = P(M) THEN 25
210 NEXT M : GOTO 30
```

Gene Majewski
Schiller Park, IL

\$1B4 Time format—The TI\$ variable is somewhat confusing, since it includes hours, minutes and seconds with no separators. Since TI\$ is a string variable, the string manipulation commands can be used to add a colon and drop off the seconds.

```
100 PRINT LEFT$(TI$,2) ":" MID$(TI$,3,2)
```

Mark Doble
Mons, Belgium

\$1B5 Data debugging—Sometimes when using a checksum program to assist in the correct entry of Data statements, you continue to get checksum errors even though the data items seem to be correct. In those cases, you probably have a punctuation error in your Data statements, such as a period instead of a comma, or an extra comma that adds a spurious zero to your data.

Marie E. Coon
Bothell, WA

\$1B6 Vanishing variables—Shift your computer into Lowercase mode, then type in the following program (you'll have to shift to get the uppercase letters).

```
10 DATA XYZend
20 N = 5
30 READ N$: PRINT N,N$
```

Now run the program and observe that the computer ignores it completely. List the program, and notice that not much of it remains. The moral is to be cautious when typing in Lowercase mode, since your computer ignores shifted letters unless they are in quotes. Use only unshifted letters for commands and variables, or some very strange bugs may appear.

Marion Maddocks
Glenwood, IA

\$1B7 Warm/cold starts—The *C-64 User's Guide* gives the command SYS 64759 to reset the machine and clear its memory, or, in other words, to reset to a cold start. In reality, this command resets the machine to a warm start, or the same state it's in after

pushing the run/stop and restore keys. The default colors are returned, but your program stays in memory. The correct command for a cold start is SYS 64760.

Linda Zolinski
Milwaukee, WI

\$1B8 Better For...Next delay loops—The following line is often used to wait until a key is pressed or a certain time has passed.

```
100 FOR T = 1 TO 2000 : GET AS$ : IF AS$ = "" THEN NEXT
110 Continuation of program
```

The above method usually works fine, but it includes a potentially fatal bug, since it can exit the For...Next loop without executing the Next. When such an exit is made, the computer's stack pointer is not restored to its proper value, and the chance of an Out Of Memory error is greatly increased. It is better to use something like this:

```
100 FOR T = 1 TO 500 : T = T + (500 - T)*PEEK(198) : NEXT :
POKE 198,0
110 Continuation of program
```

Location 198 contains the number of entries in the keyboard buffer. When no key is pressed, the loop sets T = T, then increments T; it finishes as soon as T = 500. As soon as a key is pressed, PEEK(198) = 1, setting T = 500. The loop is satisfied without corrupting the stack pointer.

If you begin line 100 with POKE 198,0 you will clear any previous keypresses before starting the delay loop. If you want to have the loop exit only when a certain key is pressed, you can do this:

```
100 FOR T = 1 TO 500 : T = T - (500 - T)*(PEEK(197) = X) : NEXT
: POKE 198,0
110 Continuation of program
```

In this line, X would equal the value for the desired key as determined by the keyboard matrix table. You can find the value for the key you want by running this:

```
1 PRINT PEEK(197) : GOTO 1
```

When you press the key of interest, its matrix value will appear on the screen. This is the value you should substitute for X.

Katherine Myers
Fresno, CA

\$1B9 Longer shortcut?—Using Boolean expressions to condense a series of If...Then statements into one ON statement may seem shorter and faster, but it is not! For example, the series

```
5 IF A = 1 THEN 500
6 IF A = 2 THEN 600
7 IF A = 3 THEN 700
```

is written in Boolean as:

```
5 ON -(A = 1) - 2*(A = 2) - 3*(A = 3) GOTO 500,600,700
```

It looks shorter and faster, but the three If...Then lines take up 27 bytes as tokens, and the ON statement takes 36 bytes. Also, the If...Then series is evaluated faster be-

cause the Boolean statement has to do all the arithmetic involved as well as just evaluate the expression.

**Marilyn Sallee
Alliance, NE**

\$1BA To float or not to float—Does a floating-point variable or integer variable use less memory? Each side has its advocates, but the real answer asks another question first—how is the number used? As a single variable, such as a simple counter, using I is shorter than I% by the one byte needed to type the %. Otherwise, they use exactly the same amount of memory. However, if you use an integer array, then I%(J) will use much less memory than storing the same numbers in array I(J) because the computer stores integer arrays more compactly.

**Marilyn Sallee
Alliance, NE**

\$1BB Bad spelling—(See trick \$1B0.)

```
300 REM Q: NAME DOROTHY'S CAPITAL
310 REM " A: {2 SPACES}{COMD @}{SHIFT B} A
```

**Leonard Pinth-Garnell
New York, NY**

\$1BC Paper saver—You can save paper by saving your old program listings and so on. When you need to print something for your own use, use the reverse side of these discarded listings. This has worked well for me, especially with the higher quality paper.

**Mary Brigito
Old Forge, NY**

\$1BD Open command glitch—Any time the Open command is used with device number 2, all variables and arrays are cleared. Device number 2 is reserved for RS-232 devices, and activating it makes some internal changes to prepare for RS-232. Whether or not you have an RS-232 device connected, OPENx,2,y will clear all your variables. Therefore, be very careful about using device number 2 at any time. If you're writing a program involving an RS-232 device, be sure to open your channel before setting any critical variables.

**Heather Albright
Ventura, CA**

\$1BE 1526 print sizes—Since printer manuals are hard for beginners to understand, many owners of Commodore's 1526 may not be aware that there are actually four sizes of print available. There is the regular size, plus three horizontally expanded fonts. The program below illustrates them very nicely.

```
2 A$ = CHR$(14)
4 OPEN4,4
6 PRINT#4,"THIS IS REGULAR PRINT"
```

```
8 PRINT#4,CHR$(13)
10 PRINT#4,A$;"THIS IS ENHANCED PRINT"
12 PRINT#4,CHR$(13)
14 PRINT#4,A$;A$;"GETTING BIGGER"
16 PRINT#4,CHR$(13)
18 PRINT#4,A$;A$;A$;"LARGEST!"
20 PRINT#4,CHR$(13)
22 CLOSE4
```

**Gregory L. Bues
Milford, CT**

\$1BF Better printed listings—Commodore's 1526 printer has a little-understood paging mode that allows it to skip over the perforations between sheets of paper. With very little effort, you can use this feature to get nice top and bottom margins on your multiple listings.

To try it out, put a long Basic program in memory—one that takes more than a page to list on the printer. Align the paper in your printer so the top of the sheet is just barely under the two black rollers on the movable paper bail, and enter the following line in Direct mode. The title can be anything at all and, if you'd like, can be omitted.

```
OPEN4,4 : CMD4,"{SHIFT CLR}TITLE" : LIST
```

Then watch as your printer makes a professional-quality listing. When the listing stops, don't advance the paper by hand. Instead, enter, in Direct mode:

```
PRINT#4,"{HOME}" : CLOSE4
```

You'll see the paper advance so the bottom perforation is right at the tear-off point on the silver bar that covers the platen.

You can add the following lines to any program, and a GOTO 10000 will get you a similar listing, but with a customized heading for the date or anything else you'd like. When the listing is finished, your cursor will be positioned so you can feed your sheet just by pressing the return key.

```
10000 REM ** LIST ON 1526 PRINTER - PERFS AT ROLLERS
10010 INPUT"HEADING":A$
10020 PRINT"{SHIFT CLR}{CRSR DN}PRINTCHR$(19) : ;
PRINT#4:CLOSE4{2 CRSR UPS}":OPEN4,
4:CMD4:PRINT"{SHIFT CLR}"A$:LIST
```

Remember, a question mark *cannot* be used in abbreviating the Print# statement.

**Louis F. Sander
Pittsburgh, PA**

\$1C0 Proofreading tip—After you've typed in a program from a magazine, it's often necessary to proofread your work. This job can be made easier by listing your program onto the printer, then proofreading the printout against the original copy. Compared to reading the screen, reading the printout is easy on the eyes, and it's much easier to find errors. This method is also timesaving, since you don't have to keep listing to the screen.

**Roberta Roberts
Chesapeake, VA**

LEROY'S CHEATSHEET®

KEYBOARD OVERLAYS

FOR COMMODORE 64

(VIC-20 also available)

LEROY'S CHEATSHEETS® are plastic laminated keyboard overlays designed for use with popular software and hardware for Commodore's VIC-20 & C-64 computers.

These cut-it-yourself overlays are designed to fit over the keyboard surrounding the keys with commands and controls grouped together for easy references.

SHAPE UP

WITH YOUR C-64

By *CHRISTINE ADAMEC*

Who would have thought five years ago that you might use a computer to balance your diet and improve your physical fitness? Now there are such programs for health-conscious adults. Some of them will analyze your current intake of vitamins and minerals, helping you to create a more balanced diet; others will help you develop your own exercise program.

Four programs are reviewed here: Total Health from PractiCorp, The Model Diet from Softsync, Aerobics from Spinnaker Corporation and C.A.T.O. (Computer-Assisted Training Optimizer) from Syntonic.

Total Health and The Model Diet are nutrition programs designed for people who want to lose weight and eat right. Aerobics and C.A.T.O. help you to improve your physical fitness by giving

Diet and exercise—that's what the doctor orders to keep you fit and trim. Here are reviews of two nutritional and two physical fitness programs that will help you watch your weight and stay lithe and limber.

you exercise programs that you can tailor to suit your own needs.

Total Health

After you've loaded your tape or disk, Total Health starts by asking you some questions. Are you male or female? Pregnant? Nursing? And on an activity level of 1-5 (with 1 being low), where do you stand? (The manual explains that a person on level 1 burns 250 calories per day, whereas an athlete on level 5 burns 1600 calories per day.) Next, you are asked how old you are, how much weight you want to lose and how quickly you want to lose it.

Then you're asked to input what you plan to eat today, from a selection of about 100 foods. (You can go through the entire menu to find the right foods, or you can press f1 for the start of the dairy group, f3 for the meat group, etc.)

The computer also breaks the food down into protein, carbohydrates, fat and sodium. For example, I learned the cup of milk that I had with my breakfast contained 8.5 grams of protein, 12 grams of carbohydrates, 8.6 grams of fat and 122 milligrams of sodium. As I entered the rest of my breakfast foods, the program gave me a running total of calories, carbohydrates and other nutrients at the top of my screen. When I'd finished, the computer told me I'd devoured 455 calories so far, and that I'd be allowed 1345 more calories for the day.

Depending upon whether you want to lose weight or maintain your current weight, the program gives you a recommended daily calorie allowance. By keeping a close watch on your daily intake of calories, vitamins, minerals and so on, you can maintain a healthy, balanced diet and still reach your desired weight.

You can create a file by saving your statistics to disk or tape, and then call up a graphics display on your screen. Bar graphs will illustrate exactly where you stand on the criteria of calories, carbohydrates, fats, sodium and the various food groups.

I have only two criticisms of Total Health. First, I would like a greater

selection of foods. Second, I wish I could print out my data, especially the graphs. Sure, I can save my data, but I'm limited to viewing it on the screen, and I'd like something in hardcopy to study and show to my friends. Yet overall, Total Health is helpful and easy to understand.

As the manual puts it, Total Health "won't lock the refrigerator door, or make saltless crackers taste like devil's food cake." Instead, it will "instruct you to eat more of one of the basic food groups and cut down on your intake of another." (PractiCorp, The Silk Mill, 44 Oak St., Newton Upper

Falls, MA 02164. C-64/\$29.95 disk; \$24.95 tape.)

The Model Diet

The Model Diet is a comprehensive weight-loss and nutrition program. The first of the seven menu options, Calculate Requirements, asks many questions. In addition to the usual height, weight, sex, etc., Model Diet also asks if you put salt on most foods. Do you exercise regularly? Do you smoke? Do you drink? Do you eat fruits and vegetables? Do you get colds easily? Do you

live in a big city? Do you get headaches frequently? Do you become tense easily?

The program supposedly uses your answers to compute your needed vitamin and mineral intake, but neither the manual nor the screen tells you *how* it does that. What if you *do* get a lot of headaches? You could have a vitamin deficiency, a sinus condition or maybe a brain tumor—who knows? A screen message giving you some possible reasons would have been helpful. You can also opt to use the government's recommended daily allowance of vitamins, which is provided in the program.

After you answer all the questions, the program compares your actual weight to a recommended weight. (Total Health asks you how much you want to weigh, while Model Diet tells you how much you should weigh, based upon a number of factors.) If you need to lose weight, the program reveals how long it will take by cutting your calories at a rate of 100 per day, then 200, on up to a maximum of 700 calories per day.

I like the capability of printing out information with this program. The printout gives a very detailed breakdown of your daily intake, showing the percentages of the recommended daily allowance of 12 vitamins and minerals as well as the percentages of your individualized amounts.

If you find that you're lacking in a certain area, the program can help by giving you valuable information. For example, if you're lacking in vitamin B₁, you can call up the vitamin and mineral information option and ask for vitamin B₁. You'll discover that beef, liver, lean pork and whole grains are foods that can build up your B₁ intake. You'll also learn that a deficiency of B₁ could cause gastrointestinal problems, decreased alertness and slower reflexes.

Model Diet offers an exhaustive listing of nearly 2000 food types, broken down into 16 categories. You can print out the whole food listing or a particular category. You can also en-

What you get if you cross a Commodore 64 with a Ferrari.

You get the incredible Indus GT™ disk drive. You get brains. You get beauty. But, that's not all you get. You get a disk drive that can handle 100% of Commodore's software. Up to 400% faster. You get the disk drive with the best service record around. With a one year warranty on parts and labor to prove it.

And, you get the only disk drive that comes with free software. Word processing. Spreadsheet. Database manager. Plus, a carrying case that doubles as an 80 disk storage file.

Most of all, you get luxury. From the sleek lines of its sound-proofed chassis to the responsive AccuTouch™ controls at the Indus CommandPost™. From the

LED display that keeps you in control of your Commodore to the air-piston operated dust cover that protects your disks and drive.

So, you know what you really get if you cross a Commodore 64 with a Ferrari? You get the best.

INDUS™

ter your own items and their nutritional value. (Softsync, 14 East 34th St., New York, NY 10016. C-64/\$29.95 disk.)

Aerobics

Maybe you already have a well-balanced diet and what you really need is a good exercise program. According to their manual, Spinnaker's Aerobics disk is designed not only to "provide you with a total fitness program to relieve stress, provide flexibility and muscle tone, and increase endurance," but also to "help you get in touch with the way your body works." The program offers you a cute graphic of a woman in leotards, complete with sweatband, who bounces, jogs and exercises on your screen.

You can elect beginner, intermediate, advanced or "a la carte" exercises. (A la carte gives you a list of about 20 different exercise groups.) You start off with warm-up exercises (which you can skip, if you like). The aerobic exercises are next, then cool down exercises. You can spend 25 minutes on the program or up to an hour and a half—it's your choice.

Here's an example of a 3½-minute aerobics routine: 15 jogs, 15 hopscotches, 10 jumping jack twists, 10

side-to-sides, 10 criss-cross feet, 15 jogs and aerobic stretches.

You should be able to easily understand what the on-screen figure is doing, but in case you don't, written directions are provided at the bottom of the screen and in the manual. In the upper-left corner of the screen is a counter, which counts down the exercises as she (and you) finish each set. The whole program is explained thoroughly and explicitly. Sure, you can buy a videotape (for about \$20 more than this program) of your favorite movie star exercising, but then it would be the same old stuff every time. With the Aerobics program, you can customize and change it to your individual needs and time constraints.

Any criticisms? Each part of the program has its own music, but I quickly grew tired of it. (The manual says you can turn on your own stereo if you'd prefer, so they've obviously anticipated this objection.)

At first it felt awkward exercising with my computer, but so what? No one's around to laugh hysterically at me when I go through my paces. And the program is a whole lot cheaper than joining a health club, where you'll have to stick to its particular

regimen. (Spinnaker Software Corp., 215 First St., Cambridge, MA 02142. C-64/\$44.95 disk.)

C.A.T.O.

C.A.T.O. (Computer-Assisted Training Optimizer) was originally developed to help the U.S. Army evaluate its soldiers' physical fitness. This highly professional, very serious program includes a comprehensive notebook-sized manual with diagrams and descriptions of all exercises, as well as understandable directions for the whole program.

For the first-time user, the computer asks simple questions, such as your weight, height and sex. Do you want the 3-, 5- or 6-day workout schedule? (The program recommends that you start with the 3-day schedule.) Next you must input your measurements and determine your fitness, flexibility and strength. Several tests are given to determine your current level of fitness, including push-ups, pull-ups, sit-ups and other exercises. You'll also tell the computer which, if any, fitness equipment you have available to you. Then C.A.T.O. uses all this information to design your personal exercise program.

Once your exercise program has been designed, you can call up a screen display, which shows a hi-res graphic of a very well-toned man and woman flexing their muscles. No movement is shown, but the exercise name is shown, along with how many you should do and which muscles will benefit.

As you progress, you can call up the Graph mode and see a block display of your improvement. You can also select a nutrition option, which gives you dietary advice on calories, protein, carbohydrates, fat and fiber.

Over 100 exercises with varying levels of difficulty are included in this program, ranging from the isometric military press to jumping jacks and bench presses. There's something for everyone here.

C.A.T.O. is a detailed fitness program for the serious user. It's easy to use, very well documented and worth the price. (Syntonic Corp., 543 South Fourth West, Missoula, MT 59801. C-64/\$59.95 disk.)

The Handicapper

Use your **Commodore 64** to improve your performance at the track! These fine programs for **Thoroughbreds, Harness Horses** and **Greyhounds** combine the power of your computer with the savvy of a veteran handicapper. Spend a few minutes entering data, and The Handicapper will rank the horses or dogs in each race. All the information you need is readily available from the Thoroughbred Racing Form, harness or greyhound track program. We even provide a diagram that shows you where to find it!

Horse racing factors include speed, class, past performance, post position, stretch gain, beaten favorite, jockey or driver's record, weight (for thoroughbreds) and parked-out signs (for trotters). **Greyhound factors** include speed, past performance, class, favorite box, kennel record, breaking tendencies, beaten favorite.

Complete instructions and wagering guide included. **Thoroughbred, Harness or Greyhound Handicapper**, only \$34.95 each on tape or disk. Any two, just \$49.95. All three only \$64.95. Checks, Money Orders or VISA/MC welcomed.

TELEMESSAGE C-64 BULLETIN BOARD SYSTEM THE PROFESSIONAL APPROACH TO ELECTRONIC MAIL!

FULL FEATURED:

- Software clock and calendar
- Stores up to 100 private messages
- Private file for msgs to the SYSOP
- Automatic Mail—search at logon
- Solid crash-proof design
- Automatic error recovery
- Easily customized by operator
- X-MODEM DOWN LOAD CAPABILITIES
- On-line membership application
- Operates in standard ASCII
- Capacity for 100 members
- Private and public messages
- Logs a record of each call
- Includes the popular chat mode
- Menu driven and easy to use
- Includes five support programs
- Detailed operations manual

SECURITY:

Our system has security features that rival the large information services. No need for concern about callers abusing or crashing TELEMESAGE!

BUSINESS APPLICATIONS:

Many of our customers use TELEMESSAGE to advertise and process orders. With our system your customers can shop 24 hours a day!

HARDWARE REQUIREMENTS:

- 1-Compatible with most auto answer modems including the Commodore 1650, Westridge and Hayes.
- 2-Works with either the MSD SD-2 or two Commodore 1541 disk drives. (Specify your disk drive model when ordering)

You get all of these features plus six programs, for only **\$79.50**. Make payment by check or money order. (add \$3.00 for C.O.D. orders)

Looking for a new image? This article discusses the differences between television displays and video monitors, and poses the important questions you must ask.

WHAT YOU SEE IS WHAT YOU GET

By TOM BENFORD

Most Commodore computerists use the family television for their video output. While the screen display is usually good, such an arrangement can create problems. For example, if one family member wants to watch a television special and another wants to use the computer, the one television set can't accommodate both persons.

One solution might be to purchase a second television. Another solution might be to buy a monitor for use with the computer. Some monitors can even be used as televisions. If you're interested, stay tuned. You might even improve your image.

You'll See the Difference

The foremost reason for using a video monitor with your computer is because it provides a substantial improvement in the image. Once you understand the various ways an image is created on the screen, you will also understand why a monitor provides you with the best picture.

On a TV set, the broadcast signal is received by the antenna and fed into the set's circuitry. Through a rather complex series of interpretive steps, that signal is broken down into various components that provide color, image (raster/scanner) and au-

dio information, thus enabling you to see and hear what is currently being shown on a given channel. Because this signal is carrying so much information, it is *modulated* so that certain bands of it carry the audio portion, while others carry the video, and so on.

The audio/video circuitry of your Commodore computer produces a *composite* signal for the video, with a separate carrier for the audio portion. The video portion is further separated into *luma*, or light signals, and *chroma*, or color signals. In brief, these signals are ready to be accepted by a composite video monitor just the way they come from the computer. This form, however, is not acceptable to your home TV, which uses modulated signals.

Your C-64 or Plus/4 has a built-in radio frequency (RF) modulator to convert the A/V chip's output into a form more palatable for the TV to accept. On a VIC-20, the RF modulator is the external black box; its cable plugs into the VIC on one end and the TV switch box on the other.

So, a TV needs a modulated signal, while a monitor needs a composite signal. Some monitors also accept another type of signal known as RGB, which simply stands for red, green

KATHERINE MAHONEY

Mahoney

and blue. Since Commodore computers do *not* put out this form of video signal, you should be aware that you *cannot* use a monitor that has RGB input only; you need a composite video (input signal) monitor.

Expressed in the simplest terms, a TV signal is modulated, or bounced. Because of this modulation and other factors, the signal often isn't at its purest.

Composite signals, on the other hand, are in a refined and pure form, with no bouncing. This permits a much cleaner signal that, in turn, generates the clearest picture. However, there's a bit more to it than just the type of signal.

A Resolution Revolution

A video image is composed of pixels. Look closely at your TV or monitor screen and you'll notice that the picture is composed of tiny dots, much like the dots in a newspaper photograph. These are the pixels.

Video *resolution*, or a picture's clarity, is measured in pixels; the more pixels, the better the resolution. Here's why.

The more closely the pixels are packed together, the more video information is displayed. This is particularly noticeable in images with

A composite color monitor will give your Commodore the best video image.

curves or lots of color combinations. Having more dots in a given area allows the curve to be smoother or the separation of the colors sharper and crisper. Where there are fewer pixels, the resulting picture may have image smear and/or color bleed.

Television sets have lower resolution than video monitors because the FCC has standards with which home televisions must comply. Included in these standards is the fixed number of pixels that will produce a certain resolution ratio. The broadcast signal must also comply with these standards. The resolution standard

for broadcast is on the low side because of the bouncing modulated signal. A composite signal carries much more video resolution (pixel) information than a modulated signal.

What to Look For

Just as there are black-and-white and color televisions, there are also monochrome and composite color monitors. With monochrome monitors, you have your pick of austere black-and-white, amber or green phosphor screens.

Black-and-white monitors are the least expensive. They're suited for applications where the displaying of text information is of primary importance. However, many users find that the harsh contrast of a black-and-white screen is hard on the eyes.

If you're going to be spending a lot of time at the screen, amber or green phosphor displays are easier on the eyes. Generally, the cost of an amber or green phosphor display is only about \$10-\$25 more than a comparable model with a black-and-white display. Owing to the lack of color in the image, however, they are poorly suited for color graphics or gaming applications.

Before I discuss color-composite monitors, let me say a few words about sound. Many of the inexpensive monochrome monitors don't have any built-in speaker, which means that you'll have a picture, but no sound!

When you shop for a monitor, make sure you check to see whether or not it has a speaker. If you buy one without a speaker, you'll have to jerry-rig the sound output to your home stereo or other such audio amplifier.

Another nice feature is an ear-phone jack, so you can plug in a pair of headphones and listen to your games' sounds without disturbing others.

Most low-end, "economy" monitors won't have a speaker or an ear-phone jack, so you might want to pay an extra ten bucks or so for a monitor that does offer these features.

A composite color monitor will provide your Commodore with the best possible video image. Only by using a high-resolution color monitor can you truly appreciate your Commodore's excellent colors and graphics capabilities. This especially holds true if you own one of Commodore's newest computers, the C-16 or the Plus/4, as they both offer 128-color capability.

In regard to signals: The color-

SCREEN DUMPER 64™ COPYRIGHT 1984 BY MICRO-W DISTRIBUTING INC.

How would you like to have a copy of all of the text or graphics that appear on your monitor screen? Well SCREEN DUMPER 64™ may be what you are looking for. This program will transfer to your printer* a copy of what you see on your monitor screen including hi-resolution graphics, text, and multicolor sprite, etc. It even works with the KOALA PAD™. You can load this program into your computer in a hidden location so that it shouldn't interfere with your programs. This means that you can use your Commodore 64 normally and then call up this routine to dump what is on the screen. Colors are represented by 16 shades of gray for faithful reproductions.

ALL THIS FOR ONLY \$29.95

CARDCO MT/1 MONITOR TUNER

Cardco, Inc. has just released an add-on tuner, for composite monitors, that will enable you to watch television on your monitor!

The MT/1 is color-coordinated to match the Commodore 1702 color monitor, and it carries the usual Cardco lifetime guarantee to the original owner. The suggested list price (as of this writing) is \$199.95.

The MT/1 comes with its own wireless remote-control unit. Hooking it up to your monitor is simple, as there are only three connections to be made: antenna, video and audio.

The antenna connection uses the familiar screw-on coax-type connector, while the video and audio ports use standard RCA jacks.

Another feature of the MT/1 is that it is ready to accept multiplex (stereo) broadcasts when the FCC gives clearance for this enhanced sound broadcast format.

A very convenient feature is the built-in power jack on the back of the MT/1. This allows you to plug the monitor into the tuner, rather than into a wall outlet. The advantage of using this setup is that the power to the monitor shuts off when you shut off the tuner.

The wireless remote-control unit is a compact, slim box with controls for channel selection, channel search up or down, volume, muting and on-off. The remote-control unit is powered by two AAA batteries, which should last for over one year with average use.

The MT/1's large LED indicators for channels can easily be read from across the room. Additionally, the unit is cable-ready, and there is a channel-conversion chart on the back of the remote unit.

The MT/1 offers an affordable modification to your high-resolution monitor. Some of you might prefer this setup to a color TV, as it provides a clearer picture.

composite signal may be combined and fed into the monitor with one cable, or it can be further defined into the chroma and luma signals mentioned earlier. While the combined signal is much better than that on a TV set, the defined chroma and luma setup is better yet.

The best of the composite color monitors will provide for combined composite video input or separate chroma and luma input, with a switch to select the mode. In either case, the audio signal should always be carried through its own cable.

Concerning size, is bigger better? Bear in mind that you'll probably be spending a lot of time staring at this screen, so be sure that you get one that can be comfortably viewed. I suggest a minimum of ten inches diagonally; larger, if you can afford it (most monitors are 12 or 13 inches).

What about the warranty? Remember that a monitor is really a high-performance TV screen without the tuner circuitry. Make sure that the manufacturer is willing to cover the unit for at least 90 days on parts and labor, as this is pretty much the industry standard. Also inquire about the serviceability of the unit; does the manufacturer offer servicing, or will you have to leave it in a repair shop for a few months while the parts are flown in from lower Tasmania? This is an important consideration that few buyers think about until the monitor develops a problem.

How to Decide?

Which one is best? This is a question you'll ultimately have to answer for yourself. The best way to decide is to compare the actual video displays of those monitors that interest you. If the store has a Commodore

64 hooked up, you may be able to use it for your comparisons.

It's a good idea to bring along software that you've used a lot, so you'll have a familiar image on which to base your comparison. Another aid in making your selection is the chart included with this article (see Table 1), which gives specifications for the various models.

Ultimately, however, your own eyes should be the judge, since they're going to have to live with your decisions.

I've been asked a number of times what I use for my own applications. I have one Commodore Model 1701 and two Model 1702 monitors in my setup. My choice was a fairly straightforward one, based on these factors: their screens are comfortably large; their color rendition and resolution are excellent; their inputs are switchable from combined composite video and audio to chroma, luma and audio; their warranty is standard; the color is compatible with my C-64; most of all, they're dependable.

The Commodore monitors in my studio are on for an average of 12 hours a day, often seven days a week. I have literally thousands of hours of use on them, and I've never had any trouble at all.

Oh, yes...the price is right, too! The local Kmart sells them for \$259—a really good price for this much monitor!

The Combination TV/Monitor

With the growing popularity of component video systems, we're starting to see more and more combination television/monitors in the stores.

By means of a switch, these units can change from a television to a hi-

res monitor that lets you animate sprites with your computer. While this does indeed give you the best possible means of using one video screen for two applications, it doesn't solve the problem of one person watching TV while another computes.

You can also watch TV on your monitor if you own a home video recorder. The VCR has its own built-in tuner and a pair of jacks for video-out and audio-out. If you connect these jacks to your monitor, you can use the monitor as a TV.

Of course, you'll need an antenna connected to the VCR tuner, but the output of these jacks is composite video, which, you'll remember, is the type of signal that the monitor can handle.

If you don't own a VCR or you're not interested in hooking it up to your monitor for TV reception, then check the sidebar on this article to find out more about Cardco's MT/1 Monitor Tuner unit.

The Chart

The accompanying chart (see Table 1) lists several of the most popular monitors with their important features. This chart isn't complete, but it provides a very good cross-section of what's available.

If you're interested in a monitor that isn't mentioned on this chart, you can still use the chart as a guide for comparing features and price.

I hope this article has given you a "clear picture" of what a monitor can do for you! [R]

LIGHT YEARS AHEAD

WE GUARANTEE IT!

We feel that our products are the best on the market, and we are so sure you will think so also that we offer a 30 day money back guarantee.

PRINTMASTER/+G PARALLEL PRINTER INTERFACE™

This is the most advanced printer interface on the market at any price. The Printmaster/+G supports all Commodore printer commands. Prints graphics and graphics characters on all popular printers. Complete switch selection. Transparent, Emulation, Hex, List, and Lock modes. Cassette port powered. Also has external power jack. Prints enhanced graphics. And that's just the start. **IntelliFeatures™ give you advanced features found in no other printer interface.** Printmaster ROM based routines can load from the Printmaster into the computer. Display the disk directory on the screen without destroying your BASIC program. Machine language terminal software loads in less than 4 seconds. ASCII/Speedscript file conversion. The Printmaster can also operate by itself. Print an ASCII diskfile directly from the disk to the printer without going thru the computer. Also comes with **Hi-res screen print and Banner** print programs on disk. **Optional user installable 16K or 32K printer buffer** also contains a ROM which adds many other advanced features such as printing a BASIC program from disk without going through the computer. Disassembles and prints machine language also. Many, many more features. All this and more.

Catalog #10-115 Printmaster/+G Parallel Printer Interface **\$119.95**
Catalog #10-116 Printmaster 16K Buffer Expansion **\$69.95**
Catalog #10-117 Printmaster 32K Buffer Expansion **\$89.95**

DELUXE RS232 INTERFACE

The most versatile RS232 interface on the market. Supports full RS232 signal set including Ring Detect. Switch selectable for DTE/DCE, and Busy Line polarity. No other RS232 interface currently offered has all these selections. Easy to use. Good Documentation. Comes with it's own 3 foot cable with either a male or female DB25. Type in BASIC terminal routine, program transfer routine, and more. For Male DB25 order 10-112. Female order 10-113. **\$42.95**

ALSO FROM OMNITRONIX: CASSETTE INTERFACE

10-101: Use any cassette with 20/64. Make tape backups \$34.95. **PRINTMASTER/U+G** 10-108: Economy parallel printer interface. Connects to the user port. Disk included contains machine language wedge which changes user port to parallel port. Does graphics. \$39.95. **RS232 PRINTER ROUTINES** 10-109: Machine language software. Use RS232 printer with programs not designed for RS232 printer. Many features. \$29.95. **VOLKSMODEM CABLE** 10-103: Connect Volksmodem to a Commodore. No other interface needed. \$22.95.

One Little Word After Another

Word Processing on the C-64

*Word processors for home computers
have made many a writer's life far easier.
Here are reviews of more than a dozen
available for the Commodore 64.*

By **BILL GATES**

Word processing is one of the most practical applications of the Commodore 64. Many people buy their C-64 system for the sole purpose of word processing. It is no wonder, then, that there are so many word processors on the market. This article will attempt to sort through the confusion and spotlight the better products. Also, it will indicate some products to avoid.

A Growing Phenomenon

Word processors make typewriters obsolete. That simple fact explains why the word processing phenomenon is taking over at the office and invading the home.

With a word processor, there is no such thing as correction fluid, ribbons or retyping. Entering and changing text is achieved through the editing process. The format of your printed document can be changed by pressing a few keys.

"How wonderful," you might be thinking, "but I never could learn all those complicated word processing commands." Put your fears aside. Welcome to the world of these user-friendly word processors. Many of these programs are so easy to learn that you can be off and running in fifteen minutes.

For Home and Office

Before you read the reviews, you should think about what you want in a word processor. The word processors reviewed here fall into two main categories: home use and professional use. Word processors for the home are usually easy to learn and

relatively cheap, but they lack advanced features. Professional programs have the advanced features, but some of them may be priced out of your range.

The chart accompanying this article compares the features of the word processors reviewed. Many of these features are defined below. If you're a beginner, you should become familiar with them. The chart and definitions will give you a good background in word processing terminology, and they may help you to decide what you need in such a program.

Editing Features

Cursor Movement. All of the word processors reviewed here make use of the cursor keys on the Commodore keyboard. The up and down keys are used to scroll through the text. Most of the programs allow you to jump from one section of text to another. Some even allow movement by one word, sentence or paragraph at a time, which can speed up editing.

Deletion. The real joy of word processing is that typographical errors can be corrected instantly with the press of a key before anything is ever printed on paper.

Block delete is a command that can be used to eliminate parts of sentences or even entire paragraphs with a few keystrokes. With some word processors, you can recall the deleted text if you change your mind.

Insertion. To make an insertion in existing text, you simply start typing at the desired location, and the program moves the rest of the text over to make room for the entry.

Block Moves. While editing your text, you may come upon a sentence or paragraph that would fit better somewhere else. With a word processor, it is just a matter of a few keystrokes to "cut" out what you want to move and "paste" it where you want it. Block copy allows for the duplication of what you "cut" anywhere in the document, as many times as you please.

Word Wrap. With word wrap, a word that will not fit at the end of a line is automatically carried down to the next line. This makes editing much easier, since there are no confusing word fragments on the left and right margins of your text.

Search and Replace. This has become a standard feature among the current word processors. With a search-and-replace function, you can search for a particular word or phrase and replace it with a new word or phrase wherever it may appear in the document.

Tabs. The Tab function works the same way as on a typewriter. It makes it easy to line up columns for tables and charts.

Column Manipulation. This capability is found only in the most powerful word processors. Once you have defined a column (a vertical row of names, numbers, etc.), you can move it to another place in the document, indent it, save it to disk or alphabetize it.

Printing Features

Margins. The "frame" around the printed page—the left, right, top and bottom margins—can be changed to suit your needs.

Headers/Footers. When producing long documents, it is often desirable to have the chapter name or title on each page. Many word processors will do this for you automatically.

Automatic Pagination. Most of the programs reviewed will automatically place the page number at the top or bottom of the printed pages. If the word processor is capable of producing headers or footers, you can include the page number within them.

Justification. Everything on a typewriter is aligned on the left side. Some word processors can align the right side of the printed page as well, giving your document a more professional look.

Line Spacing. Single- and double-spacing has become a standard in these word processors. Some offer triple-spacing and more.

Centering. If you have ever had to manually center a line on a typewriter (i.e., count the letters, divide by two and count backwards from the center), you will appreciate the automatic centering capability of many word processors.

Indentation. If you neglected to indent your paragraphs while writing, most word processors can do it for you automatically when printing.

Widow and Orphan Control. When you come to the end of a printed page, you don't want to have one line of a new paragraph at the end of a page (an "orphan") or the last line of a paragraph at the top of a new page (a "widow"). Some programs can watch out for this and automatically prevent it from happening.

Change Pitch. Pitch refers to the number of characters per inch on your printed document. Many printers will allow you to condense or expand the spacing between letters by altering the pitch settings; some word processors allow you to access this capability.

Preview. This should be a standard feature, but is far from it. Preview allows you to examine the way the printed page will look before you print it, thus eliminating the need for a trial printing. Word processors accomplish this by one of three methods: by reducing the size of each character by one-half to make an 80-column preview screen; by keeping the normal 40 columns and using horizontal scrolling, or by having a pixel representation of the printed page (characters are reduced to dots), giving you a general idea of what it will look like.

Character Enhancements. If your printer is capable of producing italics, boldface, subscripts, superscripts and underlining, then you will want a word processor that is capable of utilizing these features.

Default Values. Instead of having to set all the printing format features every time you want to print a page, most of the programs have preset values that you can use.

Multiple Copies. If you want to have a hundred copies of the same document printed, this feature saves you from having to go through the Print command a hundred times.

Form Letters. While this is a task better suited to a database and word processor combination, some word processors have the ability to produce the same document with different names and addresses. This involves first creating a file of names and addresses, then a document with variable blocks, or holes, where the varying information is to be placed.

Force Page. This forces the next part of the document to appear on a new page.

File Size. An important aspect to compare among word processors is the amount of text that can be in memory at one time. When you reach the end of text memory, you have to start a new file.

Linking Files. This feature allows you to link and print separate files.

Hyphenation. The automatic word wrap may leave your right margin very ragged. Some word processors will allow you to hyphenate words. The only way you'll know if a word needs to be hyphenated is to either preview the document or do a trial print run.

Disk Commands. With most word processors, you can Catalog, Format, Scratch and Rename from within the program.

On to the Reviews

The 13 word processing programs reviewed here are all currently available for the Commodore 64. While there are several others on the market, the following programs provide a good sampling of what is available.

Bank Street Writer

Bank Street Writer (Broderbund Software) is characterized by ease of use. There are no complicated commands here; everything is menu driven. The documentation is good, but rather unnecessary, since the menus are self-explanatory. There is a tutorial included on the disk that takes you through the program step by step.

Editing. The problem with this program is that in order to move the cursor or execute any command, you must enter the Edit mode. If you make an error while entering text, you must leave the Write mode, enter the Edit mode, move the cursor, then re-enter the Write mode. While this is not a major problem, it does slow you down.

In the Edit mode, you work through menus at the top of the screen to reach all the commands. This approach ensures that you'll never forget a command, since they are all listed on the screen. This makes the program easy to learn, but it also makes accessing commands rather slow compared to some other programs.

Print Formatting. Lack of any form of print preview means that you have to do a trial print run to see what the document will look like. Bank Street Writer does have a rough-draft function for this purpose, but a preview function would have been preferable. The print formatting commands are all listed on a menu, so there aren't any imbedded printer commands to learn. The lack of character-enhancement capabilities will frustrate the owners of printers that include these features.

Summary. Bank Street Writer is best suited for home use. It has been extensively tested in the academic environment, and it is ideal for students who want to learn word processing. Those who need a faster, more powerful word processor can do better.

Cut & Paste

Cut & Paste (Electronic Arts) is a very easy-to-learn program. The packaging and manual have a great emphasis on style, making it a friendly introduction to word processing. The package includes a document disk, which is a nice extra. A reference card is also included.

Editing. Cut & Paste is awkward in a few areas. If you want to simply type over a misspelled word, you must first mark the word by pressing CTRL-A, then move the cursor to highlight the word, and then make the correction. The cut-and-paste procedure (block move), for which the program is named, is more easily accomplished. It is done by marking the text as explained before, and pressing CTRL-C (for cut). The text that was marked then goes into the buffer. Move the cursor to where you want the text in the buffer to appear, press CTRL-P for paste, and it's there. The tab function is preset to five

Now you can add friction feed capability to your Epson — MX 70/80, RX 80 type printers with our

MICRO-GRIP™ V

Note: Diagram is not drawn to scale!

- Micro-Grip™ gives you single sheet feed capability you want without the high cost of buying a friction feed printer.
- Designed for the Epson MX-70/80, RX-80, and printers based on the Epson design such as the IBM #5152, Commodore 4022, and the H.P. 828086/820905 B.
- Easy to install, will not disturb the tractor feed capabilities of your machine.
- Unconditional money back guarantee if not completely satisfied.
- Just **\$44.95/ea.** (add \$3.00 for shipping)

* NOTE: Micro-Grip™ is not a substitute for a friction feed printer. It is a retrofit mechanism for the purpose of obtaining single sheet correspondence from your tractor feed printer.

Printing will start approximately 1 1/2" from the top of the page.

Circle 50 on Reader Service card.

RABBIT

For the 64 or VIC

\$39.95

Alternative to the 1541 Disk Drive!

Load or save 8K in 30 seconds! It's less expensive than disk and can even be used as a backup to the flaky 1541!

Yes, the RABBIT is that and much more. Uses the Commodore cassette deck but loads and saves much, much faster than regular Commodore load/save. Think about it — loads or saves an 8K program in almost 30 seconds, 16K in 1 minute, etc. That's nearly as fast as the 1541 disk. RABBIT is on cartridge so it's always there. Also has other useful commands. Specify for use on the 64, or on the VIC 20 —

"It was the best purchase for my computer that I have ever made!"

"Congratulations on your 64 Rabbit. It's a super piece of work."

MAE NOW THE BEST FOR LESS!

wasted their money on some cheaper off brand assembler tell us how much better the MAE is.

The most powerful Macro Assembler/Editor available for the Commodore 64 and other CBM/PET computers, and also for the ATARI 800/XL and Apple II/IIIe.

MAE includes an Assembler, Editor, Word Processor, Relocating Loader, and more all for just \$59.95.

We could go on and describe the MAE but we thought you would like to read our customers' comments. The following are actual unedited comments from correspondence about the MAE:

"Excellent Development Package"

"Compares to DEC and INTEL."

Please for your own protection consider the MAE first before you buy that other assembler. We've had numerous customers who

had numerous customers who cheaper off brand assembler tell us how much better the MAE is.

We could go on and describe the MAE but we thought you would like to read our customers' comments. The following are actual unedited comments from correspondence about the MAE:

"I like MAE and wish that you had it on the Macintosh."

"It is a superb program."

AutoLoad/Directory

Cartridge for the 64.

This cartridge has a push-button switch on it that allows you to: 1) Load and then automatically run the first program on disk, and 2) Display the disk directory — either at the touch of a button! It may not sound like much but it is absolutely one of the most convenient accessories you can install on your 64. Housed in an attractive plastic cartridge complete with easy to install instructions, works with every software package (including menus and commercial software) we have tried and it doesn't take away any memory. Think about it the next time you type: **LOAD "*" , 8,1 RUN** or **LOAD "\$" , 8 LIST**. Remember, it's only \$19.95.

TelStar 64™ by Eastern House

A Communications Cartridge for the Commodore 64.

Upload/Download, Status Line, etc. Works with your Commodore 1600 or 1650 Modem. Auto-dialing, etc. when used with the new CBM 1650 Modem.

Cartridge and Manual — \$49.95

Eastern House

spaces, and it cannot be changed.

Print Formatting. Cut & Paste is lacking in this area, for there is no print preview, character enhancements, justification or centering.

Summary. Cut & Paste is an easy-to-learn, friendly word processor. However, its lack of some important printing features and its limited, sometimes awkward editing procedures prevent it from being a serious, professional package.

Creative Writer

Creative Writer (Creative Software) is amazingly easy to learn and

use. An extensive Help menu, containing all of the program's functions, can be accessed by pressing f3. The Main menu, from which you can select the printing, formatting and writing options, is clear and concise and can be accessed at any time by pressing f7.

Editing. Commands are executed by pressing f1 first, then making a minimum of keystrokes. For example, if you want to delete a paragraph, you press f1 to enter the Command mode, then the delete key for deletion, and then the P key, for paragraph. Creative Writer has a lot of

features not found in many programs designed for home use (e.g., word wrap, tabs and widow- and orphan-control).

Print Formatting. Print previewing is done with a pixel representation of the printed page. Formatting is done through a simple, but complete, menu, thus eliminating confusing embedded commands. My only complaint is the lack of character enhancements—you can't underline, italicize or use other special features.

Summary. For home use, I recommend this program above all others. Creative Writer is easy to learn and use. It is powerful, yet clear and simple enough for the beginner.

Paperclip

Paperclip (Batteries Included) is one of the best professional word processors available for the Commodore 64. It has a multitude of features, yet it is still easy to use. Paperclip is dongle-protected, meaning that there is a plastic (dongle) plug that fits into the joystick port; this must be inserted to run the program. While this may seem like a nuisance, it means that the program itself is unprotected, allowing you to make backup copies.

Editing. Every command is accessed through the control key. An example of this program's thoroughness is its search-and-replace function. When you search for a word, you can search for the exact word, use wild cards (searching for "eve*" finds both "ever" and "even"), or match a letter combination at the beginning or end of a word. My only complaint with Paperclip is that it lacks word wrap, making text very difficult to read.

Print Formatting. The newest version of Paperclip, 64D, includes an 80-column print preview. On the disk are files for all the popular printers, which you can load quickly from inside the program. With this information, Paperclip has total printer control. Printer commands are all embedded, so there are no menus at all in Paperclip, just the Editing mode. The embedded commands are just as complete as the editing features.

Summary. Paperclip is an excellent professional word processor. I could not find anything that it lacked, except for word wrap. I recommend it highly for the professional category.

Homeword

Sierra's Homeword is extremely simple to learn. The package in-

A NEW YEAR, A NEW ReRUN

1985 March Quarterly

You live in a complicated world. The last thing you need is stress that comes from do-it-yourself programming.

This year, let the new **ReRUN** give you great ready-to-load Commodore-64, Plus/4*, and VIC-20 programs more often.

Beginning in March, the best and most recent programs listed in **RUN** can be yours every four months. That's right, **ReRUN**'s going quarterly! AND... Commodore-64 and VIC-20 programs will be offered on separate cassettes/disks! No more getting only half of what you're looking for.

Every quality cassette or disk will contain approximately 10 outstanding programs for home, business, or school. And just in time to help you face the IRS, the March **ReRUN** will be highlighted by "Tax Records 64"... it keeps track of all your deductions so that you do less groaning on April 15! (Runs on the C-64 and Plus/4.)

Also, in March, "Hi Res Painter" will let the artist in you create a masterpiece on your VIC screen. Plus, March **ReRUN** offers challenging, fun-filled games like "Quatro" and "Fly The Grand Canyon".

Your quarterly comes with a complete booklet of documentation and loading instructions. The hard work has already been done. All you do is load, run, and enjoy!

Order your March **ReRUN** on cassette for just **\$11.47,**** or on disk for just **\$21.47**. Simply return the coupon today, or call **TOLL FREE 1-800-258-5473**. In NH, dial 1-924-9471.

It can be just the beginning of more enjoyable, relaxing programming in 1985!

* Plus/4 programs are contained on the C-64 loader.
** Prices include postage and handling.

Commodore 64, VIC-20 & Plus/4 are registered trademarks of Commodore Business Machines, Inc.

I Want To Begin '85 With Great Programming!

Please send me the March issue of **ReRUN**:

3-85C

80 PINE STREET • PETERBOROUGH, NH 03458

cludes an audio cassette with a tutorial on how to use the program. This tutorial, however, is painfully slow and overly simplistic (assuming that you already know how to turn on your computer and put a disk in the drive). The package also includes a reference card that repeats the information contained in the five most important pages of the manual.

Editing. Homeword is menu-driven through icons. In other words, the menu cursor is a large square that you place around a little picture (icon) of what you want to do. If you want to load a file, move the cursor to the picture of the file cabinet. If you want to justify the document, put the cursor around the layout icon and press the return key; then, in the Layout menu, select the picture of the justified document.

Print Formatting. In the Editing mode, a pixel representation of the printed page appears in the lower right-hand corner of your screen. There is also an 80-column preview in the Print mode. When you enter the Print mode, the program loads more data from the disk. Switching between the Main menu and the Print menu is a time-consuming process. Only the basic formatting commands are found in Homeword.

Summary. Homeword is very easy to learn, but not so easy to use. If you're a novice with a slight case of computerphobia, Homeword will serve as a painless introduction to word processing. However, users who need a sophisticated word processor may find this one to be too slow to suit their needs.

Blitztext

Blitztext (Elcomp Publishing) is a very confusing word processor with an equally confusing manual.

Editing. With virtually every other word processor on the market, you do not have to press the return key when you come to the end of a line. This is one of the joys of word processing that Blitztext has left out.

Print Formatting. Printing a document is a good example of the confusion and inconvenience involved with using Blitztext. To print your text, you press CTRL-A, type "M47", and then press CTRL-A twice. Makes a lot of sense, doesn't it?

Summary. Blitztext lacks any redeeming qualities, and I see no purpose in considering it, even for occasional home use.

www.Commodore.ca

Word Writer

Word Writer (Timeworks, Inc.) is another good, but not outstanding, word processor for home use. It comes with two keyboard overlays, to be placed above the numbers row and next to the function keys. These overlays are the backbone of the program. The documentation only briefly explains the use of each function. Half of the manual is dedicated to the use of Data Manager, Timeworks' database, in conjunction with Word Writer.

Editing. All the commands are ac-

cessed by a combination of the Commodore or control key and a key on the top row of the keyboard. Block moves are done by marking the beginning of the block with Commodore-1, the end of the block with Commodore-2 and moving or copying it to another location in the document with Commodore-3. Inserting text is not automatic (there is no Insert mode), so the only way to insert text is by first inserting lines and later closing up the gaps by using the delete key.

Print Formatting. Only the basic printing features are found in Word

ReRUN

Programs on cassette or disk that give you more time to enjoy your Commodore computer.

AVAILABLE NOW... a second collection of RUN magazine's best programs of 1984. ReRUN Volume II!

Great programs for the Commodore 64 and VIC-20, taken from the July through December issues.

With ReRUN, you'll get every program running in less time than it takes to read this ad! No tedious typing!

The new Volume II features:

- Helpful utilities like Datafile
- Educational programs like Speller
- Exciting games like Mystery of Lane Manor

You'll save yourself days of typing, build yourself a great reference library, and best of all—you'll enjoy your computer more. ReRUN is available on disk or cassette.

ReRUN Volume II, like its predecessor, promises to be in big demand. Orders for Volume I surpassed our expectations, so we've gone back to press for more. It's now available in limited quantities.

To order, simply return the coupon, or call TOLL FREE 1-800-258-5473. In New Hampshire, dial 1-924-9471. Charge it on your Visa, Mastercard, or American Express.

Order both volumes of ReRUN today and save \$5 off the total price!

3-85

Writer—there are no preview, character enhancement or any other advanced features.

Summary. Word Writer would be much too confusing for a beginner, especially with the poor manual. It lacks printing features, and it can be difficult to use; it has little to offer compared with some of the others in the home use category.

Totl.Writer

Totl.Writer (Totl Software, Inc.), unlike its predecessor, Totl.Text 2.6, ranks among the professional word processors. It has an extensive array of features. A complete Help menu can be accessed by the press of a function key.

Editing. Cursor movement can be done by word, sentence or paragraph by pressing CTRL-W, CTRL-S or CTRL-P, respectively. Block moves involve a long series of prompts. To delete a block, you first press f8 to get at the block commands, then press D (for delete). Then you are prompted to move the cursor to the beginning of the text to be deleted and press the return key, then to move to the end of the block and press the return key again. Then you are asked if you *really* want to delete

the block. (Would you have gone through all that if you weren't serious?) Block copies are even more tedious; you are prompted three times to see if it is all right to go on.

Print Formatting. Totl.Writer has an enormous list of formatting capabilities. All commands are embedded. One feature that I found in no other word processor was true embedded footnoting. The program automatically places the footnote at the bottom of the page where the footnoted passage occurs.

Summary. Totl.Writer is a very impressive program and well worth considering for professional use.

WordPro 64

WordPro 64 (Pro-Line Software, Ltd.) is an excellent professional word processor with an identity crisis. The official name of this program is currently being decided in court, but I will use WordPro 64 for this review. Whatever you want to call it, this word processor has a myriad of features and is easy to use. The documentation is a little tough to follow at times, but it covers the program adequately.

Editing. Block moves are done through a combination of the Com-

modore key and another key that represents that particular function. For example, Commodore-D enters the Block Delete command. Pressing W, S or P highlights a word, sentence or paragraph, respectively. Then, press the return key and the highlighted text is deleted. The scrolling speed of the cursor up and down keys can be increased by first pressing f1.

Print Formatting. This is where WordPro 64 really shines. Print preview can be done either by 40-column horizontal scrolling or by pixel representation. Extensive printer files on disk are utilized to take full advantage of your printer. The formatting commands are embedded, and they're very thorough. A header or footer can appear on the left, middle or right side of the printed page.

WordPro 64 can also produce double columns. (I found this feature on only one other word processor—CGRS Microtech's Copy-Writer. However, WordPro 64 costs less and does more.) Double columns on a printed page would be suitable for newsletters, pamphlets and brochures. It is utilized by an embedded command (dc) followed by the value of the column width.

Another advanced capability of

this program is proportional spacing between letters. Quite a few printers are capable of this, and WordPro 64 will allow you to access it.

Summary. WordPro 64 rivals the best of the professional word processors, and I would rate it a "best buy." It has good editing features and an incredible list of printing features.

Word Commander 64

Word Commander 64 (MMG Micro Software) is a rather run-of-the-mill word processor for home use. It is not very friendly, nor is it easy to learn. You must first make a printer file through Basic (on disk) from outside the program. This could be disastrous if you are not familiar with Basic, and the poor documentation doesn't make it any easier.

Editing. While Word Commander 64 has many features, the editing commands are not easy to execute. Blocks are deleted, moved or copied by first marking them with Commodore-X at both ends (the text does not become highlighted), and then pressing CTRL-K to delete the text.

Print Formatting. Preview is done by horizontal scrolling, which takes away from text memory. All printer commands are embedded.

Summary. This is a rather mediocre word processor. Word Commander 64 is not a bad program, but there are better ones on the market for the same price.

Textomat 64

Abacus Software's Textomat 64 is a new, completely menu-driven word processor. You reach almost every editing command through an extensive series of menus. This approach will enable you to learn Textomat 64 in a very short time, but it may become rather tedious to continually wade through all the menus. The documentation is very thorough and easy to read.

Editing. You can move through the text quickly by using cursor jumps (by the word). Pressing f3 moves the cursor forward one word; pressing f4 moves it backward one word. This is much faster than just using the cursor-right key to move across a line.

A major problem with Textomat is really a simple thing—the delete key. Unless you type perfectly, you are going to make errors. Correcting typos should be as simple as pressing the delete key. You cannot do this with Textomat 64. The delete key deletes the character under the cur-

sor, not the character immediately to the left of it. Therefore, you must back up using the cursor-left key and then delete the error. I found that this slowed me down considerably while typing.

Block moves involve going through a series of menus, which is helpful at first, making it almost impossible to forget the command. However, once you learn it, you will wish that there were a faster way to do it. All the editing, printing and disk controls are accessed through these menus.

Print Formatting. Textomat 64 has print preview and most of the standard print-formatting capabilities. These features are controlled mainly through a format menu.

Summary. Textomat 64 is suited for home use, but it is too slow to meet the demands of professionals.

Copy-Writer

Copy-Writer (CGRS Microtech) is a program that might scare a beginner away from word processing. Before you can use Copy-Writer, you must create a new version of the program, customizing it for your particular printer—a process I found quite confusing. The documentation,

which came to me unbound, is not much help.

Editing. Editing capabilities are minimal with Copy-Writer. The cursor disappears when it is moved, making editing unnecessarily confusing. There's no Insert mode; you're limited to the insert key.

Block moves are accomplished by deleting the text, character by character, into a buffer, and then dumping the buffer at the appropriate spot. All commands are entered on a separate prompt line at the bottom of the screen. To search for a word, you

press the run/stop key to enter the prompt line, then type *c/word/* and press the return key. As with Textomat 64, the delete key does not work as it does in Basic, which means that correcting errors can be a tedious process.

Print Formatting. CGRS Microtech's advertising for Copy-Writer emphasizes its double-column capability. This means the program can produce two columns on the same page without negative line feeds (the printer moving the paper backward). This is an impressive feature. All the other

standard printing features are also included.

Summary. Copy-Writer's best feature is its double-column capability. However, if you really need double columns, then I recommend WordPro 64.

Fleet System 2

Fleet System 2 (Professional Software, Inc.) is a brand-new professional word processor from the makers of WordPro 3 Plus, one of the best-selling programs for the C-64. With this reputation behind it,

you would expect Fleet System 2 to be something special. It is.

Fleet System 2 is a very professional, easy-to-use program. It includes a fast, 70,000-word spelling checker on the back side of the disk. Unfortunately, the documentation is not as good as it could be. A reference card is also included in the package.

Editing. Fleet System 2 is almost exactly like Paperclip in terms of editing commands. In fact, I found it hard to make a distinction between the two programs. However, Fleet System 2 makes better use of the function keys,

which are used to enter the Insert and Shift Lock modes.

Deleting a block of text involves pressing fl, then D (for delete), and then W or S to highlight words or sentences. Pressing the return key then deletes the highlighted text. One thing that I dislike about Fleet System 2 is that moving and copying blocks can only be done by entire screen lines, not by words or sentences.

Print Formatting. Fleet System 2 has all the formatting commands that you'd expect in a professional word processor. All the commands are

embedded in the text. Again, it is difficult to distinguish between this program and Paperclip.

Summary. Fleet System 2 is an excellent word processor with a fast spelling checker. If you are looking for a professional program, you should definitely consider this one. ®

ATTENTION COMMODORE 64 OWNERS
We'll pay for your mistake!

We know that it's difficult, especially since everyone is trying to come out with one. Now that error track protection is going the way of the dinosaur, you probably purchased an obsolete piece of software. Well we will give you \$25.00 credit* for any original copy utility software disk that you would like to trade in for the "NEW REVISED CLONE MACHINE." Our program can now back up non-standard sectors with complete control, detect and reproduce density-frequency alterations, alter the number of sectors on a track, sync to particular reference sectors (including a single sync Bit copy) PLUS reformat a single track.

Other back up programs have only recently caught up with our ability to reproduce errors. Included is Fast Clone as well as all of the other standard Clone Features, we've even made it more user friendly too! THE CLONE MACHINE was the first utility of its kind and others followed. Well, we still feel that it's time for the others to try to play catch up again.

**OUR SPECIAL MSD VERSION
NOW AVAILABLE TOO!!** **STILL ONLY \$49⁹⁵**

RENUMBERER

A Remedy for Poor Planning

*Here's a handy utility program
that will take the drudgery out of renumbering
your program's lines.*

By ALEJANDRO A. KAPAUAN

Renumbering a program can be a time-consuming and tedious task, especially if your program contains several On...Goto and On...Gosub statements.

The disk-based Basic File Renumber program will read in a Basic program and rewrite the new, renumbered program. Unlike the renumbered commands of some programmer's aids, Basic File Renumber will automatically adjust all line numbers following statements such as Gosub, Goto and If...Then. Since this program renumbers from file to file, owners of VIC-20s with very limited memory can renumber even very large programs.

Besides renumbering, Basic File Renumber can also generate a cross reference of line numbers for your renumbered program. This cross reference provides a list of line numbers that are mentioned in other lines and shows where they occur.

You also might want to use Basic File Renumber to change the line numbers of existing programs or program modules so that you can easily merge them with your own programs (see John Olsen's article "Mix and Match Programs on the C-64" in *RUN*, April 1984).

Typing In the Program

The program is found in Listing 1. The DIM statement in line 100 allows the utility to renumber programs of up to 300 lines in length (I chose this number arbitrarily). As is, the program uses more than 3580 bytes, so if you're using an unexpanded VIC-20, reduce the value of MX in line 100 to about 150. An unexpanded VIC can renumber a program of 150 lines, but it won't have enough memory to generate the cross-reference listing.

If you use either a VIC with at least 8K expansion or a Commodore 64, you may leave the value of MX at 300. If you have sufficient memory, you may increase this number to renumber longer programs. To improve screen formatting of the cross-reference table, VIC owners can change the 40 in line 610 to 22.

Type in the program carefully. Pay attention to the semicolons in the Print# statements. Remember, you cannot use the Print statement's abbreviation (?) for the Print# statement. If you do, you'll get Syntax errors when you run the program. To speed up disk reads, the data in lines 720 and 730 constitute a short

machine language program, which is Poked into the cassette buffer. Be careful in entering the data. After typing and proofreading the program, save it to disk before you attempt to run it.

Using the Utility

To use Basic File Renumber, load it into your computer and run it. Insert into your disk drive the disk that contains the program you wish to renumber. The program will ask you for the name of the input file and the name you wish to give the renumbered file. It will then ask you for the starting line number and the increment by which to renumber the program. You will also be asked if you want a cross reference of the program.

The file will be scanned in a first pass to determine what line numbers it contains. On the second, slower pass, it will renumber your program's lines. The second pass will be slower because each line must be decoded to determine if it contains line number references that need to be changed. Also, both reads and writes to the disk will be taking place, which slows down the operation of the program.

(503) 244-5782 **WELCOME**

(Prepayment Required)

This product is provided for the purpose of enabling you to make archival backups only.

When renumbering is complete and you have chosen the Cross Reference option, you will be prompted by the question:

CROSSREF(S/P/Q)?

Press S if you want to display the cross-reference table on the screen, P if you want it printed on the printer or Q if you want to quit.

After the table is printed, you will be asked the question again. That way, you can print or display the

table as often as you wish. Each line in the table consists of a line number and a list of line numbers that refer to it. Numbers that are preceded by an asterisk indicate that the reference is in the form of a Gosub or On...Gosub statement.

To check your renumbered program, load it into your computer and list it. If you run the utility program for the first time, and the renumbered program looks like a mess or won't list

at all, then you've made an error in typing in Listing 1. Check your work, and make the necessary corrections to the program. You may then scratch the mangled renumbered file from your disk and try again. R

Listing 1. Basic File Renumber program for C-64 or VIC-20.

COMMODORE CLINIC

JIM STRASMA

Commodore Clinic is designed to help you through troubles and questions that arise as you use your Commodore computer. Send questions to:

*Jim Strasma
Commodore Clinic
1238 Richland Ave.
Lincoln, IL 62656*

and we will answer as many as possible in this column.

This information comes from Dave Gzik, of Commodore's customer support office in Toronto, Ontario, who apparently discovered the fix.

**Stephen Isaacs
Thornhill, Ontario
Canada**

A: Great, and to think some people still don't even believe Commodore has a customer service department.

most people about what the real name is. Finish the line as usual:

SAVE"0: BELL",8

Then, to load it again, you must remember to type a shifted rather than a regular space for the first character of the filename.

For still more excitement, try to put a delete character into the filename. This can be done from the keyboard in Insert mode, and will be a nice project for you.

UPDATES

Update: There is a Radio Shack replacement ribbon for the VIC 1525 and 1515 printers. It is catalog number 26-1424, developed for the Radio Shack DMP-100 printer.

**E.D. Shockley
Pompano Beach, FL**

A: Thanks to all of you who discovered this. You can never have too many sources for printer ribbons.

Update: Regarding the lockup problems when using the 801 printer with the VIC, as reported in the November 1984 Commodore Clinic, there is a perfect fix. Right after turning on the VIC, type:

POKE 37160,0:POKE 37161,1

This completely solves the problem of the 801 locking up.

As you know, the VIC feeds data down the serial bus faster than the 64. This sometimes causes the 801 to get confused. The Pokes adjust the internal timers of the VIC to properly "handshake" with the 801.

PROGRAMMING

Q: Is there a way to put a hidden password in the title of a program on disk, so only people who know the password can load the program?

**Mike Leininger
Tipton, IN**

A: Yes, some programs do this already. The technique is to include characters in the filename that aren't what they appear to be when printed. For instance, if the name of your program is "bell," you could protect it by saving it this way:

SAVE "0:

Then, before typing the name, hold down the shift key while you press the space bar. This makes a shifted-space character, also known as CHR\$(160). It will look just like an ordinary space character when you type it in, but will change the appearance of that line of the disk directory in a way you'll have to see to believe—definitely different enough to fool

Q: I haven't been able to find anything on why and what you can do with disk drives #8 and #9. Can you explain, please? I'm in trouble!

I changed device 8 to 9, then found I can't use it with several programs that recognize only 8. Commodore is no help—they sent me a one-line note: "Change it back!" The program to change the device number via software doesn't seem to work to make 9 into 8 again. Should I make the hardware change back? Why make the change in the first place?

**Sarah Knutti
Bethesda, MD**

A: Either change it back or add a single-pole single-throw switch across the solder pad you cut to make it device 9. The switch will let it be 8 or 9 as needed. But I can't imagine why you would want a 1541 to be anything other than device 8 if you don't own any other disk drives. As you noticed already, device 8 is standard.

To change a 1541, 2031 or MSD disk unit from any one permitted device number to another in software, you could use this program:

SYMBOL MASTER™ MULTI-PASS SYMBOLIC DISASSEMBLER FOR THE COMMODORE 64*

disassembles any 6502/6510
machine code program into
beautiful source

- Learn to program like the experts!
- Adapt existing programs to your needs!
- Automatic LABEL generation.
- Outputs source code files to disk fully compatible with your MAE,* PAL,* CBM* or Develop-64* assembler, ready for re-assembly and editing!
- Outputs formatted listing to screen and printer.
- Automatically uses NAMES of Kernal jump table routines and all operating system variables.
- Generates list of equates for external addresses.
- Generates complete cross-referenced symbol table.
- Recognizes instructions hidden under BIT instructions.
- 100% machine code for speed.

(Symbol Master™ is not copy protected.)

ORDER NOW! Available on disk only. Introductory price \$49.95 postpaid USA.

*MAE is a trademark of Eastern House.

PAL is a trademark of Pro-Line.

Commodore 64 is a trademark and CBM is a registered trademark of Commodore.

Develop-64 is a trademark of French Silk.

UNLEASH THE POWER OF YOUR COMMODORE 64 WITH THE ULTIMATE INTERFACE

- Control & monitor your home — appliances, lights & security system
- Intelligently control almost any device
- Connect to Analog-to-Digital Converters
- Control Robots
- Perform automated testing
- Acquire data for laboratory & other instrumentation applications
- Many other uses.

Don't make the mistake of buying a limited capability interface. Investigate our universally applicable Dual 6522 Versatile Interface Adapter (VIA) Board, which plugs into the expansion connector and provides:

- Four 8-bit fully bidirectional I/O ports & eight hand-shake lines
- Four 16-bit timer/counters
- Full IRQ interrupt capability
- Four convenient 16-pin DIP socket interface connections
- Expandability up to four boards & sixteen ports.

ORDER NOW! Price \$169, postpaid USA. Extensive documentation included. Each additional board \$149.

COMMODORE 64™ SOURCE CODE!

"What's Really Inside the
Commodore 64"

- Most complete available reconstructed assembly language source code for the C-64's Basic and Kernal ROMs, all 16K.
- You will fully understand calls to undocumented ROM routines, and be able to effectively use them in your own programs.
- Uses LABELS. Not a mere one-line disassembly. All branch targets and subroutine entry points are shown.
- TABLES are fully sorted out and derived.
- Completely commented, no gaps whatsoever. You will see and understand the purpose of every routine and every line of code!
- Complete listing of equates to external label references.
- Invaluable fully cross-referenced symbol table.

Order C-64 Source. \$29.95 postpaid USA.

All orders shipped from stock within 24 hours via UPS. VISA/MasterCard welcomed.

140 CLOSE 15
```

If you have a 4040 or larger disk unit, change the first value in line 130 to CHR\$(12) instead of CHR\$(119).

The reason for changing a disk's device number is so you can use more than one disk unit connected to the same computer. Each device needs its own address (device number) to avoid confusion, just as each person needs an individual name.

With two disk drives connected at once and set to different device numbers, you have twice as much storage space immediately available. In practice, this usually means that one holds programs, while the other holds data files, or one makes backup copies of the other's files.

If you need this capability, consider buying a second disk drive or, better yet, a dual disk drive (one with two drives in a single cabinet).

Q: I have to open several relative files, but after opening the sixteenth file, I get a Disk Full error message. What am I doing wrong?

Jorge Romo Alexanderson
Tepepan, Mexico DF

A: I know of two ways to fill a disk. One is by creating more than 144 files, which you have *not* done, based on the track and sector dump you enclosed.

The other is by creating some files that are large enough to use up all the available space. This is apparently what you've done, although I can't be sure without seeing the disk.

Even one file can overload a disk if it is a relative file and you write to a large enough record number within it. If this has happened, either choose a smaller record size or use fewer records in your files.

Also remember that only one relative file can be open on the 1541 at any one time. To use more, access them one after the other, closing the last one before opening the next.

Q: Occasionally, when I attempt to format a disk on my 1541, my disk drive cranks for a minute or so and then the red light comes on, indicating an error. When I attempt to list the disk's directory, I receive only garbage. When I attempt to format the disk again, the drive sometimes produces the same error and sometimes formats the disk properly. Do you know why this occurs?

Frank Cox
Kindersley, SAS

A: You've just described a typical disk failure when formatting. Such a failure usually means either that the disk wasn't seated properly in the drive when you tried to format it or that the disk is faulty.

If you succeed in formatting the disk on your second try, after removing and inserting the disk again, you probably don't have anything to worry about. If a second try also fails, I would return the disk for a replacement (the disks I use are guaranteed for life).

However, you still have one more option: Use a bulk eraser (a big magnet) on the disk and then try to format it one more time. Friends who do this claim it often works.

Q: My 64 and 1541 lock up when I use the Validate command on a particular disk that is nearly full (five blocks free). After a few moments, the drive head movements stop and the drive runs indefinitely with the activity light on.

How can I correct this problem, and what is the safest way to get out of a lockup situation like this? The drive will not respond to any commands, including UJ.

Rod Combellick
Fairbanks, AK

A: Most likely there is something wrong with that disk. Immediately copy (not duplicate) all its files onto a freshly formatted disk. (This is easiest to do on a dual drive, if you know someone who has one.) When you do this, you may discover some files are ruined and can't be copied, or that they can be copied, but have been altered somehow.

After all the files have been rescued, you may reformat the original troublesome disk, which will probably be all right from then on. If not, get rid of it.

As for how to get out of a disk lockup, it depends on whether the drive is reading or writing. If it is only reading a disk, no harm is done by removing the disk even when the drive-activity light is on.

On the other hand, if the drive is writing, removing the disk or turning off the computer or drive could mean lost data. After waiting long enough to be sure the computer wasn't taking time out for garbage collection, and that the drive isn't simply busy on a long slow task, the safest recovery method is to open and then close the command channel by entering:

```
OPEN 15,8,15:CLOSE 15
```

This safely closes all disk files. If the drive ignores this command, you will have to reset the computer or remove the disk—but please don't turn off the drive with the disk still in it. Odds are you'll lose some data, but it's too late to avoid that. If the information you lose is very important, there are sometimes ways to restore it. People like me do that work for a fee.

Q: I have a problem saving part of a program as it is entered, for safety, and then saving more of it under the same name later. Is there a way to append data to a program without renaming it?

L.P. Thomason
Jacksonville, FL

A: Sorry, the Disk-append option only works on datafiles, not programs. You could use the Save With Replace option when saving revised versions of a program, but it's better not to erase old copies of uncompleted programs until the finished program is thoroughly tested. This is in case something goes wrong with the latest version, and you have to go back to an older version.

When I start a new program, I put it on a blank disk, saving up to several dozen versions of the program with a slightly larger number at the end of the name each time I save it. This

continues until I finish the project. Then I copy the finished version to another disk. Finally, I reformat the project disk before using it on another project.

Q: How can I salvage a program I spent 12 hours working on? I have a monitor, so I can see the program in memory. But if I try to list, it starts out okay but later looks like garbage. When I get to certain points, the screen freaks out, turns black and makes little shapes in the corner. What is going on, and can I salvage some of this program by resetting something?

Gil Donbrava
San Antonio, TX

A: The easiest way to restore a program is from a backup copy you made before the disaster. When I am writing a new program, I save a copy to disk every 20 minutes, each with a different version number, ending up with a disk full of ever newer and more complete programs. I also save a final copy before I type RUN the first time. This avoids 99% of the problems you mention.

Unfortunately, it could easily take more than 12 hours to salvage your lost work. You should use a machine language monitor to be sure all the link pointers in the Basic program are pointing in their proper directions.

This is tedious work at best, and *not* for newcomers. If you know which line number is the first one that gives trouble and have a monitor that can convert its value into hex, you may be able to use some monitors' .H command to find that line quickly.

The link pointer is made up of the first two bytes in each line of Basic, and the first one is normally pointed to by locations \$2B-2C in the VIC and 64. Once you've repaired the program, be sure it ends with three \$00 bytes in a row and that locations \$2D-2E point one location beyond the last \$00. Then, save your work, return to Basic, type CLR, save again and try listing the result.

It isn't a job for the faint of heart. You can read more about what's going on in the "Inside and Beyond

Basic" chapter of my book, *PET Personal Computer Guide*, from Osborn/McGraw-Hill.

Q: I would love to find a book that would explain in very simple terms how to write subscripts and superscripts on my Prowriter 8510.

Dick Wick Hall
Binghamton, NY

Q: I didn't know my Prowriter could do super/subscripts. If you could note the codes down for me, I would be most appreciative.

Fred Sepanek
Albany, NY

A: To print subscripts and superscripts on the C. Itoh Prowriter 8510 (and many other printers), you must be able to change the number of vertical lines per inch.

Normally, there are six printed lines per inch. But if you change the printer to print 18 lines per inch, you can divide each line of text into three lines in the printout—one for superscripts, one for ordinary text and one for subscripts. The following steps are needed:

- set the lines printed per inch to 18 instead of the usual 6
- print the superscript characters
- print the regular characters
- print the subscript characters
- set the lines printed per inch to 6 again

The way this procedure is accomplished will vary somewhat from one brand of printer to another. You can probably find the needed codes in your printer's manual.

When using the Prowriter 8510, the code to select this action is an escape code. These are codes that start with CHR\$(27), the ASCII escape character, followed by one or more other CHR\$() values. Here are the commands:

```
18 lines/inch:
  CHR$(27) + CHR$(84) + CHR$(48) +
  CHR$(56)
6 lines/inch:
  CHR$(27) + CHR$(84) + CHR$(50) +
  CHR$(52)
```

Here is an example program that does superscripts and subscripts on the 8510:

```
100 REM SUPER & SUBSCRIPT EXAMPLE

One other complication could be your printer interface. Be sure it is set so as not to alter these codes on the way to the printer (usually called Transparent mode).

Now that you know how to do superscripts and subscripts, you can use the same approach to use the other special commands built into your printer. Just remember that, whereas most Basics control printers with Lprint commands, PET Basic uses Print# commands instead, as shown above.

SOFTWARE

Q: Is it better to buy commercial software on disk or cartridge? What are the advantages and disadvantages of each?

Dee Daviess
St. Louis, MO

A: Disks are more common, partly because they are usually about \$5 cheaper than an equivalent cartridge, but also because they can be updated more easily and don't require changing any hardware connections when going from one program to another.

On the other hand, cartridges are far more durable than disk, cannot damage your disk drive and start instantly.

Commodore Clinic

As copy-protection schemes have grown ever more elaborate and fragile, I have come to prefer cartridge versions of programs that cannot easily be copied, especially for use by kids and unskilled users.

On the other hand, constant insertion and removal of cartridges can eventually wear out the contacts on the cartridge port, so no one answer is perfect for everyone.

Q: I have a 64, a 1541 and a Gemini 10X printer. I have been able to customize the Armenian alphabet on the 64 and download it to the Gemini 10X. These programs will be used by a local church to send out their monthly mailings. Is there a word processor that will accept the customized alphabet?

David Handelsman
Philadelphia, PA

A: Paperclip 64, from Batteries Included (Toronto, Ontario), includes the ability to load custom character sets into the 64. You would still load the custom character set into the printer first, before starting Paper Clip.

Another possible solution is the WordPro 64, for the Commodore 64, from Pro Line Software, Mississauga, Ontario. It allows you to define ten special characters for both the screen and the printer.

While we're on the subject of churches, one of my recent projects has been helping friends complete a long-needed church package for the 64. It is scheduled for release this month. I'd be glad to send any church more information about it, and about a helpful user's group for churches, the Church Computer Users' Network.

Q: A good majority of the programs on the market are written in the U.S.A. Those of us in Canada find this quite frustrating. Some programs may take a year or longer before they hit the Canadian market, if they hit it at all. Surely there must be a way to obtain these programs from the States. Is there any way you know of,

with a minimum of hassles, to purchase programs across the border?

John Bouchard
Gravenhurst, Ontario
Canada

A: Funny you should mention that. Sometimes I have the same feeling, except in my version all the good programs are written in Ontario, home of both word processing programs mentioned in the previous question. Maybe the grass really is greener on the other side!

As a Canadian once explained to me, the problem with getting new products to Canada quickly is that the population, and thus the market, is smaller than in the U.S. Also, products sold there must have bilingual boxes and manuals. A representative for a U.S. calculator maker reportedly claimed he could sell more calculators in Chicago alone than in all of Canada and avoid the hassle of changing the product.

It may not work quite the same way for you, but when I need to buy something from Canada, I either wait until my annual trip to Toronto, or order by mail. In both cases, I use a credit card to pay for the item. (Let the bank worry about exchange rates!)

Up to a cash value of \$250 or so, customs duties on orders shipped into the U.S. may be paid at the nearest post office. Up to about \$400 worth can be brought in each year duty-free by tourists returning from Canada. The duties on many computer products coming into the U.S. are quite low in any case.

The duty rates and customs procedures will differ in Canada, but you should be able to get details through your post office or by writing to the appropriate government agency. You could also find a dealer with a U.S. branch, such as Canadian Micro Distributors, in Milton, Ontario. Or visit scenic Niagara Falls, NY and buy direct.

Q: In testing a 1541 disk drive with the demo disk provided, I ran the performance test program and received a number of unit-is-failing-performance-test messages. A copy

of the test printout is enclosed. Is the drive defective?

D.W. Shilling
Shoreham, NY

A: Probably not. As the message at the start of the performance test indicates, you are only supposed to run it on a "scratch" disk (a disk that does not contain any valuable information), not the Test/Demo disk itself. Fortunately, you left on the write-protect tab; if you hadn't, the whole disk would have been erased by the test. (I can't be positive about your procedure, but I ran the Test/Demo disk with the write-protect tab attached and exactly duplicated your test printout.)

Before worrying about the drive, try running the program again, using a new or reusable disk instead of the Test/Demo disk. The program called it a scratch disk because its contents, if any, can be safely scratched (erased). Be sure its write-protect notch is not covered by anything.

HARDWARE

Q: I'm having a problem with a recently purchased VIC-Modem 1600. I am unable to log onto CompuServe. The indicator light on the modem does not go on, and I am not getting the prompt from CompuServe. The modular phone I have has the dial built into the handset. Is there a problem with the modem?

Steve Herr
Chicago, IL

A: The problem is probably in your phone having its dial in the handset. Try using the modem with a standard Series 500 Western Electric desk phone, one with its smarts in the base and a detachable handset.

Get someone to assist you who has already called CompuServe and knows how to log on when the equipment works as it should. If you don't have that kind of phone available, it may be less expensive for you to trade in the 1600 on a 1650 Auto-Modem than to buy another phone.

Commodore Clinic

Theoretically, you can also order a direct-connect cable for the 1600 from Commodore for about \$15, but I've never actually seen one.

Q: I live in a rural area that does not have touch-tone telephone service. Is there any way to get on-line that is pulse dial and then emulate the tones to access computer service?

Rosalinda DeWitt
Seneca Falls, NY

A: I live in an area without tone dialing, too, but you're luckier than we are. Even pulse dialing fails sometimes here. If you need both pulse and tone dialing, some phones now have both methods built in.

This allows you to use pulse to dial out of town and then use tones to access All Net or other services that require it. One such phone is the Thinphone, from TeleConcepts, Inc. (22 Culbro Drive, West Hartford, CT 06110).

However, you won't need pulse plus tone dialing just to go on-line. The tones used by a telephone modem are different from those used to dial a touch-tone phone. As long as your phone system allows you to converse easily with persons in other towns, it is good enough to support the use of a modem.

If you have doubts about the quality of your service, use a 300-baud modem rather than the faster but more sensitive 1200-baud type. If having both tone and pulse dialing is important to you, some modems now include both in built-in autodialers.

Q: I have searched everywhere trying to find information about modems. At this time, I think my needs are for a modem that has 300 and 1200 baud. I want to be able to up and download and communicate with another 64, a VIC and a TRS-80 CoCo. What kind of program would I need to achieve the above results?

Sharon Ireland
Merriman, NE

A: My own 300/1200-baud modem is the Signalman Mark XII, from Anchor Automation, the same com-

pany that makes the 1600 and 1650 modems for Commodore. As far as I know, it's still the least expensive 1200-baud modem able to emulate the popular Hayes Smart-Modem 1200. A friend who is an engineer in the industry pronounced it a bit weaker in design than his Hayes, but both work well.

To use either, you'll also need a VIC 1011-A RS-232 interface or equivalent. I rated and described two programs that you may use with this combination of equipment in my article on terminal programs in the September 1984 issue of *RUN*. They are VIDTEX, sold by CompuServe and Commodore, and VIP Term, from Softlaw (132 Aero Camino, Goleta, CA 93117).

Also keep an eye on Commodore. I expect a 1200-baud modem announcement from them soon.

Q: I don't understand the theory behind surge protectors. Why can't you plug an \$8 surge suppressor into an outlet and a multiple outlet into the surge protector? Would this not accomplish the same thing as using the Lemon, Lime and Orange brand of surge suppressors?

Ronald Moore
Richmond, VA

A: Fancy surge protectors provide two services. First, they provide some protection against surges of moderately high voltage, just like your \$8 version. Second, they also provide filtering of more ordinary variations in voltage, damping down deviations from the standard voltage and frequency. A water heater is a good analogy for the way this works.

A water heater's size allows it to hold enough water to give a comfortably warm shower. Even though cold water is constantly entering the tank as you bathe, the water doesn't normally leave the tank until it has been warmed. On the other hand, if the water were ever to boil, a separate emergency valve would open, to give steam an escape route and prevent an explosion.

In a surge protector, the surge protection is like the emergency valve, and the filtering is like the water tank.

Thus, you do get something extra when you spend more for fancy surge

protectors. Whether you need that extra protection is another question. I have yet to hear of a piece of Commodore equipment failing for lack of a power-line filter, although several systems have been lost for lack of a simple surge protector.

One more thing—don't expect more of a surge protector than it can deliver. Nothing will protect your system against a lightning strike on nearby wiring except unplugging the computer completely.

Q: In principle, the 64 can make use of more memory than the old PETs. But I am beginning to think it doesn't do more. My PET gives me 31K free, and the 64 gives me 38K plus a 4K block of RAM that Basic does not use. Am I being kidded about the memory capacity of the 64, and if not, why can't we get more memory out of the PET using similar techniques?

J.G. Frajkor
Ottawa, Ontario
Canada

A: Both the PET and the 64 can address the same amount of memory at one time: 64K. The difference is that the PET came with less than 64K of RAM, and the 64 comes fully equipped. Both take some of the 64K for ROM, although in the 64's case, normally invisible RAM shares the addresses used by the ROM. The same is true of PETs equipped with the 8096 add-on memory board. In both cases, only machine language programs can take advantage of the added memory.

No one is fooling you about the 64's memory, but if you want to use all of it from Basic, you might be better off with a Plus/4. It uses special techniques to make all of its RAM available to Basic.

Q: I know the difference between RAM and ROM. I load a program from the Datassette into RAM. But what happens when I load a program in from a cartridge attached to the cartridge port? Does it go into RAM or what?

Tom Murphy
Maplewood, NJ

Commodore Clinic

A: When a cartridge is installed, its ROM takes precedence over any RAM located in the same memory addresses. It doesn't have to load at all (because it is already connected to the machine at the correct addresses), as long as it contains a machine language program that the computer can obey directly from the cartridge's ROM.

A few cartridges contain Basic programs that relocate themselves inside the computer at start-up, and then run in the same RAM as other Basic programs. Such programs, however, are the exception rather than the rule.

Q: I find myself the owner of a Brother CE-50 electronic typewriter. After purchasing the proper interface and cables, I still find myself at a loss to know how to get it to work with my 64. Could you help me?

Mike LaMorte
Altoona, PA

A: The data sheet you enclosed implies you may use either a Centronics parallel or an RS-232 serial interface from the Brother to the Commodore. Not knowing which you have, if either, I'll try it both ways.

The most popular connection is via a serial bus to a Centronics parallel interface. These are available everywhere now, from several makers, and have been discussed here before.

The alternative is an RS-232 interface, normally connected to Commodore's VIC 1011-A interface via a suitable cable. It connects to the user port like a modem, and is also usable with RS-232 modems.

A third alternative, new on the market, is Cardco's new Cardprint-PS, which includes both a serial and a parallel connector in a single interface connected to the serial bus of the 64.

Assuming you go with a parallel interface, it appears you simply turn switch 1 of your Brother interface off and make sure your interface is getting power from somewhere. Some interfaces are able to draw power from the printer itself; others plug into the cassette port of the 64 or a wall outlet.

If you have an RS-232 serial inter-

face instead, things are more complicated. Read about all the possible serial interface settings in your RS-232 interface manual. Then choose one and set the switches on the Brother to match. If, for example, you type

OPEN 2,2,0,CHR\$(6)+CHR\$(0)

you are asking for 300 baud, 8 bits, 1 stop bit, no parity and a 3-wire handshake. To set this on the Brother's switches, turn switches 1 and 3

on, switches 2, 4 and 5 off and ignore switch 6. Mind you, I'm basing these settings on your data sheet; I don't have a Brother printer myself. Let me know how it turns out. R

Associate Editor Jim Strasma and his wife, Ellen, have written seven books on Commodore computers and are hoping to do more. They call their company Midnite Software, because that's when they finally get everything done each day.

Nobody copies better !!

Since November 1984, Mr. Nibble has successfully copied heavily protected diskettes for grateful C-64 owners!

While others promise,

BOOK GALLERY

Compiled by SHAWN LAFLAMME

Introducing Commodore 64 Machine Code

Ian Sinclair
Prentice-Hall, Inc.
PO Box 819
Englewood Cliffs, NJ 07632
Softcover, 146 pp., \$12.95

This book aims to introduce, in very simple terms, machine language programming, as well as some of the basic inner workings of the Commodore 64. Aside from several flaws in the text, it succeeds in accomplishing these aims.

Author Ian Sinclair's target reader is the Commodore 64 owner with some experience in Basic programming, but little or no background in electronics or computer science. A large number of computer users fit this description, and many of them would like to get into machine language.

A first look at machine language programming reveals many new (and often confusing) concepts, with minimal explanations. What is needed is some very simple guidance, and that is exactly what *Introducing Commodore 64 Machine Code* offers. It starts at the most basic level, with a chapter explaining ROM, RAM, bits and bytes, in a non-technical way that avoids the childish tone of many similar presentations.

The second chapter explains how variables, strings and programs are stored in memory. While this isn't strictly a machine language subject, many machine language projects require an understanding of it, and such an introduction is a good start toward understanding machine language itself. The explanations here are brief, but after all, the book is just an introduction. Deeper understanding will come from working with the material presented and from reading more advanced works.

The next three chapters explore the 6502/6510 microprocessor. Included in these chapters are a step-by-step description of the processor's role in executing a simple program, an introduction to hexadecimal and descriptions of registers and addressing modes. The material is oriented toward those with no prior exposure to it, so the simple descriptions are lim-

ited to elementary matters. With a little effort, most readers should be able to follow them and gain some valuable insights.

Halfway through the book, the first machine language program is presented. A simple screen-fill program is shown in flowchart, Basic and machine language versions, and every aspect of the program is explained. It takes 17 pages to cover this one program, and it's well worth it.

Another 16 pages are devoted to expanding and improving the screen-fill program, and once again everything is clearly explained from several angles. Understanding machine language concepts requires painstaking analysis, and it's a joy to see it done so well in a book.

The final chapters show how an assembler is used to create a machine language program. The assembler described is Mikro, which is not widely available in this country, but the explanations apply to all assemblers. Five appendices and a brief index round out the book.

Unfortunately, editorial flaws may ruin this book for many readers. Introductory books must be free of errors and points of confusion; this one is not. Part of the problem is the author's British English and his use of unfamiliar words. Throughout the book, the word "denary" is used in place of decimal, which is a bit distracting. When Sinclair refers to outside material, his European viewpoint is also reflected. The products he recommends are from England and Belgium—you'll never find them at Waldenbooks.

More importantly, there are too many technical errors. We're asked to press the enter key, or to look for FC errors; we're referred to Push and Pull commands as well. None of these apply to the Commodore 64, and many readers will waste their time discovering this.

Some simple editing could have corrected these flaws. Also, Prentice-Hall's ads for this book are somewhat misleading. One of them claims that this book "... includes sophisticated applications in fast-moving graphics and games." Since the book's most sophisticated program is one that makes a beep when a key is pressed,

with all the other programs being screen-fills, the advertisement is a bit misleading.

Introducing Commodore 64 Machine Code is full of excellent material for the beginning machine language programmer, but the technical and communicative flaws make it unnecessarily confusing. It covers its material adequately and in a well-organized way, but the book's many errors detract from its value as a beginner's tutorial.

Pittsburgh, PA

Commodore 64 Fun and Games

Ron Jeffries, Glen Fisher
and Brian Sawyer
Osborne/McGraw-Hill
2600 Tenth St.
Berkeley, CA 94710
Softcover, 182 pp., \$11.95

This book is a collection of complete listings for 35 fun-and-games programs, written specifically and solely for the Commodore 64. In fact, none of the programs will run on the VIC-20 or the PET without major modifications.

The programs are written in Basic, and they take advantage of the special features and capabilities of the Commodore 64 (i.e., color, sound, sprites and character graphics). All you need to do is type a program listing into the computer (exactly as listed), and then follow the instructions for play, given in the introduction to each program.

One of the best things about the book is the complete, clear and concise explanations of how to read and type the program listings. This subject is treated very thoroughly, leaving no unanswered questions.

By typing in program listings from this book, the beginner will acquire a much better understanding of the graphics symbolism used on the Commodore 64. The book's tabular print-out of the Commodore graphics symbols is superb, possibly the best that I've seen anywhere. This feature alone justifies the purchase price of the book.

For those who have neither the time nor the inclination to spend endless

(503) 297-2321

most other books) is treated in such a way that a number of commands made sense to me for the first time. This is a popular subject, and yet very little practical information has found its way into the hands of Commodore owners. The authors are to be commended for including it. However, it's rather odd that the somewhat related (and simpler) topic of relative files isn't even mentioned!

In Chapter 7, you'll find out how to use the keyboard, joystick and paddles for games and other uses. There's enough information to get going, of course, but unfortunately, very little attention is paid to the VIAs internal to the VIC-20. It's knowledge of how the VIAs work that lets you use the keyboard, joystick and paddles effectively. Despite this shortcoming, the chapter does show you how to do some things with these devices.

Chapter 9 is one of my favorites, since it gives you a chip-by-chip run-down of how the VIC-20 works. I've never seen this idea carried out in any other book, and the perspective it gives

you is very valuable. By learning a little (even in general terms) about micro-computer architecture, your skill as a programmer will grow considerably. Exotic and unique programs will become possible if you learn to exploit some of the hidden hardware features of the VIC-20.

Chapter 10 takes on the popular subject of machine language programming. Since there isn't much that one can do in a single chapter, the authors have elected to provide a simple overview of the subject. You will need to fill in some of the details from other reference books. Nonetheless, you will find several very practical ideas presented here, such as loading and saving machine language programs, creating interrupt-driven subroutines and converting machine language routines to data statements. Also included in this chapter is a good 6502 command set summary (not just a photocopy of the manufacturer's data sheet).

The book concludes with a number of appendices. Included among these are the usual table of screen codes and

ASCII characters, memory maps and background and border color codes. The last appendix includes a list of Basic (as opposed to Kernal) routines that you can use from within machine language. Routines to convert integers to floating point, floating point to integers, and all of the arithmetic and operator functions, are described. In all cases, the accompanying description tells you how to set up for the routine, the calling address and where to find the result.

Of course, a reference book is of no value unless you can find the information you need, quickly and conveniently. *VIC-20 Exposed* uses indenting, boldfacing and subtitles to help you find what you're looking for. The book has a good feel—it gives you what you need without a lot of excess. Also, the fine index guarantees that this is the first book you'll turn to when you need to find VIC-20 information in a hurry!

Overnight delivery is just \$17.50—software orders only in Continental U.S.A.

On Printers

I enjoyed "Selecting the Right Printer," by Jim Strasma in your January 1985 issue. I'd like to give you some comments on our choice for a typewriter/printer.

We use the Olivetti Praxis 39/41, which we obtained by mail order from DAK Industries. The major differences between the Praxis 39/41 and the Praxis 30, which you reviewed, are speed, price and interfacing.

The Praxis 39/41 runs at 12 cps (twice as fast). The typewriter/interface combination cost us \$355 by mail order. The LCU 41B interface is Centronics-compatible, with a 2K buffer. It is also RS-232-compatible.

What came as a shock was that Olivetti chose to supply a connecting cable only for Commodore computers. In addition, DIP switches on the interface can be set so that the interface works with Commodore ASCII! The cable provided plugs into the user port, and Easy Script (or any other word processor that supports RS-232) can drive the combination.

This means that we have a daisy-wheel typewriter/printer without the additional \$50 to \$120 for the Centronics-style interface that is usually required with other printers. We feel we got a good buy for the money.

**Noel Nyman
Seattle, WA**

I think you missed a fairly good printer when you failed to include the Okimate 10 in your January 1985 article, "Selecting the Right Printer."

I am just learning to use my new Okimate 10, and so far, I am quite pleased with its performance. I use Commodore's "Magic Desk I" on their

SX-64, and my printouts are via the Okimate 10. They all seem to work well together. With the proper screen-dump utilities, I can even print out graphics.

**Robert F. Riggs
Titusville, FL**

RUN will be doing an in-depth review of the Okimate 10 in a future issue.

Editors

Where's Commodore's Service?

I would like to concur wholeheartedly with the Albert H. Coya letter of August and the Warren W. McCurdy letter of December. Commodore's support of its customers in this part of the country is nonexistent.

I bought early, paid top dollar for quite a bit of equipment and now find myself deserted and forgotten. The store I bought from has quit handling Commodore items and no longer provides services; a source of parts 400 miles away has dried up; and I do not even know where to ask about replacing a defective on/off switch for my 8023 printer.

I have had my equipment for almost two years and it has been operational for maybe 20% of that time. I am disgusted with the Commodore approach to supporting its customers.

If there is a plan afoot for the unification of Commodore 64 owners, let me in on it, because that is apparently our only salvation.

**Glen Tillitt
Wallowa, OR**

I am writing to inform you and your readers that the Commodore computer plant in California has closed down. Some of you may already have known this, if you called a service number when your com-

puter broke down. Some of us (*like me!*) found out when our computers were rejected by the current occupant of 390 Reed St., Santa Clara, CA 95050.

In order to get your computer repaired, you must send it freight prepaid, accompanied with a repair check to Commodore Computer Service Center, 1200 Wilson Drive, West Chester, PA 19380. To obtain the price of repair, you must call 1-215-431-9105.

If you bought your Commodore computer a couple of months ago or before, you received a warranty slip with a number for repair information and addresses of Commodore plants where you can send your computer to be repaired when it breaks down. *These addresses and the service number have all changed.*

The correct address and service number are listed above, so heed them well. I hope this information saves you some time and money, and I hope it saves you the useless weeks of waiting and the waste of shipping money that I went through.

**Marc Salvatierra
Phoenix, AZ**

Grateful for Language Improvement

I'd like to express my appreciation to you for Michael Buckley's Nimbots program (December 1984). Its accompanying assembly language listing is what interests me. My ability to pick up the low-level language has improved vastly, and I have *RUN* to thank for that improvement. It would be nice if this trend continued, as I'm sure it will.

**Thomas J. Aliberti
Medford, MA**

Alberta, Canada

The Medicine Hat Commodore User's Group would like to exchange newsletters and establish contacts with members of other user's groups. The club meets on the second and fourth Wednesday of each month at 7:30 PM, at the Medicine Hat College, Room N154.

For more information, write Medicine Hat Commodore User's Group, Box 764, Medicine Hat, Alberta, Canada T1A 7G7.

Decatur, IL

The Decatur Commodore Computer Club meets two times each month and currently has more than 75 members. For more information, contact Jim Tonia (president), 1368 W. Riverview, Decatur, IL 62521.

Fond du Lac, WI

The Fond du Lac Area Commodore User's Club meets every third Thursday of the month at 7:00 PM, at the Moraine Park Technical Institute (in Fond du Lac).

For more information, write Dick Lendl, 1504 Shelly Court, North Fond du Lac, WI 54935.

Southern New Hampshire

The Monadnock Commodore 64 Users can be contacted by writing RFD #1, Route 10, Winchester, NH 03470.

Richmond, VA

The Commodore 64 User's Group of Richmond, VA can be contacted through Robert S. Armstrong, Jr. (secretary), PO Box 9078, Richmond, VA 23225.

Allen Park, MI

If you live in the Allen Park, MI area and are interested in Commodore computing, you are invited to

join the Downriver Commodore Group. For information, write Ron Marshall, 17029 Keppen, Allen Park, MI 48101, 313-274-2589.

Las Vegas, NV

The Silver State Commodore User's Group has been in existence for over a year. Although the group is not aimed specifically at one computer, most of the members are Commodore owners.

At the weekly meetings, members demonstrate software packages and teach Basic and machine language programming.

For more information, write Silver State Commodore User's Group, PO Box 81075, Las Vegas, NV 89180.

Topeka, KS

The Topeka Commodore User's Group holds its meetings on the last Tuesday of each month, with software and hardware demonstrations and discussions dealing with the various problems of the computer user, from beginner to advanced.

If interested, contact Robert F. Wayman, 7939 S. Topeka Blvd. #39, Wakarusa, KS 66546.

San Bernardino, CA

With more than 100 active members, the Commodore 64 Club is involved in a wide range of activities concerning the best uses of the C-64. Meetings are held on the first Thursday of each month.

For more information, write Carl Gardenas (president), 1804 N. Dundee, Highland, CA 92346, 714-864-4498.

Longview, TX

A non-profit organization serving members and computer users in the

area, the Longview User's Group meets on the first and third Tuesday of each month.

The first meeting of the month covers general interest topics and the second meeting is held to allow special interest groups to exchange equipment and information. The group offers a public-domain library and publishes a monthly newsletter.

For more information, write Longview User's Group, PO Box 2504, Longview, TX 75606, or call Dorothy Metzler, 214-759-0699, or Joyce Pope, 214-777-4458.

West Indies

The Caribbean Commodore Computer Club was formed in November 1984 and is open to all residents of the islands of the Eastern Caribbean.

For information, contact Jim Lynch (president), PO Box 318, St. Johns, Antigua, West Indies, 809-462-4965.

Springfield, TN

The Springfield Commodore Computer Club was recently formed. For information, contact Paul Bell, Route #1, Box 166, Springfield, TN 37172, 615-384-4050.

Rochester, NY

If you live in the Rochester, NY area, you are invited to join the Commodore User's Group of Rochester, which has more than 250 members.

Meetings are usually held on the last Wednesday of each month. A small membership fee entitles members to receive the club's monthly newsletter and make use of its public-domain library.

For more information, send a S.A. S.E. to Commodore User's Group of Rochester, PO Box 26514, Rochester, NY 14626.

NEW PRODUCTS RUNDOWN

74470 12069

Compiled by SHAWN LAFLAMME

Adventure Master

CBS Software (One Fawcett Place, Greenwich, CT 06836) has released Adventure Master for the C-64.

This two-disk program allows you to create your own adventures, as well as try out the three games included in the package. Adventure Master retails for \$44.95.

Check Reader Service number 408.

Comtax

Milo Software, Inc. (PO Box 569, Jamaica Plain, MA 02130) has released the 1984 version of Comtax, a tax preparation program for the C-64.

Comtax compiles data for Forms 1040 and 2441 and Schedules A, B, C, D, E, G and W. It is available on disk or tape for \$39.95. Annual updates cost \$12.

Check Reader Service number 417.

Amazonian Adventure

Expedition Amazon is a fantasy role-playing game for the C-64, from Penguin Software (830 4th Ave., PO Box 311, Geneva, IL 60134).

You must lead your expedition deep into the Amazon rain forest to find the ruins of a fabled Inca citadel. The game is available on disk for \$34.95.

Check Reader Service number 410.

Tax Planner

The Tax Command Planner is Practical Programs' (PO Box 93104,

www.Commodore.ca
1947 RUN MARCH 1985
May Not Reprint Without Permission

Milwaukee, WI 53203) newest addition to its line of tax preparation software.

The program is designed for year-end tax planning, and it allows you to experiment with various tax strategies. Tax Command Planner is available on disk for the C-64. Retail price is \$49.95.

Check Reader Service number 426.

Investment Package

Programmed Press (2301 Baylis Ave., Elmont, NY 11003) has released its Investment and Statistical software package for the C-64, containing 50 programs for statistical forecasting and evaluating stocks, bonds, options, futures and foreign exchange.

The package is available on disk for \$100. A handbook that lists and explains all 50 programs is available for \$19.95.

Check Reader Service number 411.

National Communications System

PlayNet is a telecommunications system that allows C-64 users to establish on-line friendships and contacts throughout the U.S.

Playnet also provides bulletin boards on national and world events, arts and entertainment, sports and computers. The membership fee is under \$30. Subscribers receive a system access disk, two game disks and a monthly newsletter. PlayNet, Inc., 200 Jordan Road, Troy, NY 12180.

for the home or small business. The Ramstar Filing System is available on disk for \$35 (mail order only).

Check Reader Service number 402.

Math Series

JMH Software of Minnesota, Inc. (7200 Hemlock Lane, Maple Grove, MN 55669) has released a Pre-Algebra series designed to support the secondary curriculum for pre-algebra.

This software is intended for the seventh grade and above and is compatible with many available textbooks. The disks are available for the C-64 and retail for \$49.95 each.

Check Reader Service number 403.

Go Galactic

Infocom (55 Wheeler St., Cambridge, MA 02138) has released the Hitchhiker's Guide to the Galaxy, a text adventure game based on the book by the same name.

You are forced to flee your home and set out on a series of intergalactic adventures, hitching rides with passing spaceships. The package is available on disk for the C-64 and Plus/4 and retails for \$39.95.

Check Reader Service number 405.

Monitor Your Calls

Input Systems, Inc. (15600 Palmetto Lake Drive, Miami, FL 33157) has released CAM-64, a software package designed to monitor multi-station telephone usage with the C-64.

The CAM-64 system can be connected to the telephone-switching computer with an RS-232 interface. A permanent disk or hardcopy of records can be created for as many as 2500 calls per disk. The package is available for \$295.00.

Check Reader Service number 406.

You Are There

Karateka is an action karate game from Broderbund Software (17 Paul Drive, San Rafael, CA 94903).

Karateka makes you the hero of your own movie, complete with characters, a story line, sound and ani-

mation, drawing you into the action of the game. Karateka is available on disk for the C-64 and has a retail price of \$34.95.

Check Reader Service number 407.

Apple Emulator

Mimic Systems, Inc. (1112 Fort St., 6th Floor, Victoria, British Columbia, Canada V8V 4V2) has released the Spartan Apple Emulator.

The Spartan modular system allows the C-64 to use all standard hardware and software for the Apple II+, without losing any of the C-64's capabilities. The system consists of BUSS, CPU and DOS cards and has a retail price of \$599.

Check Reader Service number 425.

MacMusic

MacMusic is a stand-alone software package that allows you to compose your own music on the C-64, using either a joystick or KoalaPad to draw the melody on the screen.

The MacMusic package is available on disk and retails for \$49.95. Passport Music Software, 625 Miramontes St., Suite 103, Half Moon Bay, CA 94019.

Check Reader Service number 424.

Ant Attack

Quicksilver, Inc. (426 W. Nakoma, San Antonio, TX 78216) has announced the release of Ant Attack, an action game for the C-64.

You must rescue your lost love from the ants that have taken over a deserted city. Ant Attack is available on disk and retails for \$29.95.

Check Reader Service number 418.

Play Better Bridge

Artworx Software Co., Inc. (150 North Main St., Fairport, NY 14450) has released Compubridge, a bridge tutorial program for the C-64.

Designed for the novice, Compubridge evaluates your actions, corrects mistakes or weak moves and suggests alternative strategies. It is available on disk for \$24.95.

Check Reader Service number 414.

Beginning Arithmetic

The Sweet Shoppe is a mathematics program designed for children who are just learning to count and for those who are learning addition and subtraction.

It is available on disk for the C-64. Retail price is \$39.95. Eric Software Publishing, 1713 Tulare St., Fresno, CA 93721.

Check Reader Service number 412.

The File Converter

The File Converter will allow you to transfer files from one database to another, as well as input data at an increased speed.

The program is available on disk for the C-64. Retail price is \$39.95. Applied Technologies, Inc., Computer Products Division, Lyndon Way, Kittery, ME 03904.

Check Reader Service number 419.

Indiana Jones Challenge

Mindscape, Inc. (3444 Dundee Road, Northbrook, IL 60062) has introduced Indiana Jones in the Lost Kingdom, an adventure game for the C-64.

You must rely on your own intuition, skill and logic to solve the problems in the adventure—rules are not included in the manual. The game is available on disk for a retail price of \$29.95.

Check Reader Service number 423.

A Lesson in Logic

Logic Workout is an educational program that introduces to students, from the eighth grade to the college

R New Products **RUN**down

level, classical logic and syllogisms. You can work with angle logic, picture/symbol logic and more.

The Logic Workout is available on disk for the C-64. Retail price is \$34.95. Avant-Garde Publishing Corp., PO Box 30160, 1907 Garden Ave., Eugene, OR 97403.

Check Reader Service number 422.

Monty Plays Scrabble

Epyx, Inc. (1043 Kiel Court, Sunnyvale, CA 94089) has released Monty Plays Scrabble, a computer version of the popular word game.

The game is played just like the original board game, except that you do not need a human opponent. Monty Plays Scrabble is available on disk for the C-64 and retails for about \$35.

Check Reader Service number 400.

MusicWare

Sequential Circuits, Inc. (3051 North First St., San Jose, CA 95134) has released the MusicWare line of software, which allows you to play, compose and print out music using the C-64 and a Sequential synthesizer keyboard.

The MusicWare programs have a retail price of up to \$99 and are available on disk.

Check Reader Service number 421.

Save Energy

Powerport is an energy control device designed for home or business use, from Savergy, Inc. (1404 Webster Ave., Fort Collins, CO 80524).

The system can be plugged into the user port of either the VIC-20 or the C-64; it can regulate your heating, lighting and cooling systems. The device retails for under \$100.

Check Reader Service number 404.

Imperium Galactum

Strategic Simulations (883 Stierlin Road, Bldg. A-200, Mountain View, CA 94043) has released Imperium Galactum, a strategy game for the C-64.

You can conquer the universe by creating your own legion of starships that range from explorers to powerful battleships. Imperium Galactum is available on disk for \$39.95.

Check Reader Service number 409.

History Flash

Orbyte Software (PO Box 948, Waterbury, CT 06720) has released History Flash, a new addition to its ChallengeWare Social Studies series.

History Flash covers 400 years of US history, from the days of Christopher Columbus to the present. The program is available on disk for the C-64 and retails for \$29.95.

COMMODORE 64

IF YOU'RE SMART, YOU'LL GET FILTHY RICH.

FANTASTIC ADVENTURE — STRATEGY BOARD GAME!

(So good we bought out the factory)

"ANOTHER PROTECTO EXCLUSIVE"

*SALE PRICE ONLY

\$19⁹⁵

*includes beautiful \$8.95 leatherette dust cover for your COM-64 Computer

Factory List Price \$49.95

THE BEST ADVENTURE — STRATEGY BOARD GAME IN THE U.S.A.!

Are you eager for new challenges...ready to pit your skill and luck against others in an attempt to corner the world oil market? If so, Oil Barons is your game.

Starting with 4 parcels of land and over \$1 million, you search for that ever-elusive gusher. The computer does all the work, including banking and scorekeeping, freeing you to plan your strategy and make decisions that will ultimately determine your success.

Obstacles like government regulations, well fires, and hurricanes complicate matters, but the fun of increased land holdings, striking it rich, and even unloading worthless parcels on the uninitiated, more than make up for the setbacks.

FOR ALL AGES — Family, schools, businessmen, stockbrokers, oilmen etc. One to eight players, large 4 color game board, over 200 playing pieces, two sided disk and manual in a large colorful box! Keyboard controlled.

Previews of Six New EPYX Games on a disk for the Commodore 64 home computer.

SUMMER GAMES, IMPOSSIBLE MISSION, BREAKDANCE, THE WORLD'S GREATEST BASEBALL GAME, SILICON WARRIOR, and PUZZLEPANIC are hot new Action-Strategy games from EPYX. Now they're yours to preview on your Commodore 64 home computer for only \$3.00 (price includes shipping and handling).

Buy one of the games from Protecto, and we'll refund your \$3.00. So the disk becomes yours for free.

Now you can preview before you buy!

Add \$3.00 for shipping, handling and insurance. Illinois residents please add 6% tax. Add \$6.00 for CANADA, PUERTO RICO, HAWAII, ALASKA, APO-FPO orders. Canadian orders must be in U.S. dollars. WE DO NOT EXPORT TO OTHER COUNTRIES.

April

COMING ATTRACTIONS

■ **Unique Applications**—So, you thought you'd seen everything that could be done with a computer! In the April issue we present the following practical, yet unique, applications that are sure to arouse your interest:

—**Sundial Sensation.** Telling time by the sun is an unusual application, but one ideally suited for your Commodore. This novel program calculates the position and length of a shadow cast by the sun.

—**Charting Your Future.** Your life may be influenced by biorhythms, those life cycles that indicate your physical, emotional and intellectual highs and lows. This program lets you chart those cycles to let you know when you're at your best... or worst.

—**Celestial Swami.** You can look into the future as often as you dare with this fun program that unleashes mysterious, mystical forces hidden deep inside your C-64's ROM.

■ **Teacher's Pet**—This educational program generates worksheets that parents and teachers can use to help youngsters learn basic arithmetic.

■ **Easy Assembly**—*RUN* introduces an easy-to-follow tutorial series on programming in assembly language. If you know Basic, you'll find programming in assembly language a lot easier than you imagined.

■ **Spotlight on Productivity**—This series on built-in software for the Plus/4 continues with a look at File Manager, a database program that lets you create data files, which you can merge with the Plus/4's other built-in programs.

"The Complete CARDCO Line" ... and still growing!

CARDCO provides "Commodore-ready" computer accessories that will enhance your utilization of Commodore-64 and VIC-20 Computers, increase their capability, and add to your enjoyment and skill. AND, they're available for use with other personal computers, too.

Designed with the user in mind, CARDCO offers fine accessories including Printer Interfaces with and without graphics, Expansion Interfaces, Memory Expansions, Cassette Interfaces, Numeric Keypads PLUS "NOW" Software for your VIC-20 and C-64. These programs include the "WRITE NOW" Word Processor, "MAIL NOW" Mailing List, PRINTER UTILITY PROGRAMS on Tape and on Disk, "SPELL NOW" Spell Checker, "GRAPH NOW" including "PAINT NOW", and "FILE NOW".

CARDCO has three new Letter Quality PRINTERS with your choice of drumhead design (8 1/2" carriage), Daisy Wheel Design (13 inch carriage) and Daisy

Wheel Design (11 inch carriage). "Commodore-ready" ... plus; with compatible input for PC, PC jr., TRS-80 and many more personal computers. CARDCO's NEW "DATA CASSETTE RECORDER/PLAYER" is also "Commodore-ready" and ready for instant shipment at prices that will amaze you.

CARDCO will constantly increase its line with unique and new products to enhance the enjoyment of computer owners.

Write for illustrated literature and prices or see CARDCO Computer Accessories and Software wherever Computers are sold.

8:30

THE MANAGER

A powerful database management system. For business, educational or personal files. Not for Rockford's files. With four built-in applications. Or design your own. (Diskette)

10:00

SIMONS' BASIC

Rated PG. Expands Commodore BASIC by an additional 114 commands. Convenient programming commands such as RE-NUMBER and TRACE plus graphics plotting command. (Cartridge)

Announcing the most exciting variety show on television.

Featuring many of the stars of arcade games, education and the business world.

Produced by (and for) Commodore, the people who bring you the Commodore 64™ a 64K computer that would be a value at three times its price. In fact, many of its competitors are three times its price.

Produced in living high resolution graphics with 16 available colors and with eight 3-dimensional sprites.

With a real high fidelity sound that covers a 9-octave range.

And a supporting cast of low-price, high capacity disk drives, printers, monitors (a better way to watch Commodore 64) and modems.

So, if you're not pleased with what's on your tv set tonight, simply turn on your Commodore 64.

COMMODORE 64
IT'S NOT HOW LITTLE IT COSTS,
IT'S HOW MUCH YOU GET.
