## y KEY MASTER

One of the easiest-to-use, most powerful disk backup program ever written for the 64. Working with the 1541 or the 1571 KEYMASTER is like getting two copy programs for the price of one. Its main feature comes with 50 keys that unlocks protected disks by ELIMINATING the protection scheme originally written on the disk.
Once one of the KEYMASTER'S KEYS has unlocked a disk, the program can generally be FILE COPIED onto another disk (also making the program compatible with non-1541 drives.)
In addition to the UNLOCKING KIT it contains a powerful yet easy to use general purpose copier for the programs not listed as a key.

## With One 1541:

- FAST FILE COPIER - up to 5 times faster!
- FAST full protected - disk GCR nibble copier works in only 75 seconds!
- FAST full unprotected-disk copier.
- FAST 10 second disk formatter.

With Two 1541:

- FAST file copier - up to 6 times faster!
- FAST full protected-disk GCR nibble copier works
in only 37 seconds!
- FAST full unprotected - disk copier.
- 50 KEYS for popular programs will be provided on the first KEYMASTER disk. Frequent updates of 25 to 50 additional KEYS will be available periodically. (No original disk return required for updates!).

## ALL OF THIS AT THE RIGHT PRICE! ONLY $\$ 29.95$ for KEYMASTER $\$ 10.00$ for update disks KEYMASTER created by Jim Drew

## THE SHADOW \$89.95 *HACKER PACKAGE \$39.95

Shadow is a new and revolutionary piece of hardware that is used to duplicate even the most protected software. Fitting inside the disk drive (no soldering required). SHADOW takes complate control of all functions giving near $100 \%$ copies.

Being the best utility available today, it will even copy the other copy programs.

Because of the Shadow's unique abilities, we feel DOS protection is a thing of the past.

Shadow a disk while it loads, then read an exact list of:

- Track, sector, ID, check sum, drive status
- High and low track limits
- Density use on each track
- Half tracks that are used
- Command recorder shows commands that were sent to 1541 while program was loading
- RAM recorder records custom DOS

Shadow-scan any disk, then read exact list of:

- Valid tracks, halt tracks, partial tracks and segments
- Sync mark link, header block links and data block links
- Track to track synchronization

Exclusive snap shot recorder will give you an exact copy of the 1541 RAM and can be viewed, saved or printed. Plus many more features included.
*Requires Shadow

Canadian/Foreign Orders Call (206) 687.5205

## *GT PACKAGE

$\$ 44.95$
Highly sophisticated and integrated piece of hardware that turns you 1541 into something you've always wanted.

- Track and sector display
- Drive reset switch
- Device number change
- Half track indicator
- Abnormal bit density indicator
- Shadow on-oft indicator

The Shadow display will give you an accurate display of precisely what track you are accessing during a normal load even if the program does a read past track 35.
-Requires Shadow

Order by phone 24 hrs. 17 days or send cashier's check/money order payable to Megasoft. Visa, MasterCard include card number and expiration date. Add $\$ 3.50$ shipping/handling for continental U.S., \$5.50 for UPS air. CODs add $\$ 7.50$, Canada add $\$ 10.00$. Other foreign orders add $\$ 15.00$ and remit certified U.S. funds only. Distributors invited and supported.

## RUNNING RUMINATIONS

## Policy on Published Programs

User's group presidents and program directors across the country are grappling with the problem of formulating club policy regarding the club's use of programs published in computer magazines. I've responded to many such inquiries about $R U N$ 's policy. With each letter I receive, I'm encouraged that users are concerned about adhering to the copyright law in this matter.

The law is specific: Copyrighted programs in magazines are protected from unauthorized copying and distribution, unlike public domain programs, which anyone may copy and distribute. While the policy regarding the use of published programs may vary from magazine to mag. azine, all published programs are covered by this copyright law.

Confusion arises when magazines decide not to protect their copyright. For example, one computer magazine states that their programs "are in the public domain; free to copy (give away), not to sell."

I'd like to clear up a couple of misconceptions about RUN's policy:

1. When a published program is manually typed into an individual's computer, it does not enter the public domain and cannot be reproduced with impunity.
2. Even if he or she receives no monetary consideration, a computerist may not legally distribute that typed-in program to others.

Simply put, RUN's policy is to retain our copyright to the programs we publish; they are for the personal use of the reader and may not be copied and distributed.

As a service to its readers, $R U N$ offers its published programs on disk in ReRUN. We hope that you will avail yourselves of this service, rather than seek out software libraries which may illegally make $R U N$ programs available.

## Magic Moves

According to reader surveys, the Magic column is certainly one of the most-read features of $R U N$; it has becameroplithafore ed of the most popular columns in

any computer publication. Its success can be directly attributed to the high quality of submissions from RUN's inventive and imaginative readers.

Effective immediately, all submissions, comments, questions and any other correspondence regarding Magic should be addressed to:

> Magic
> RUN Magazine
> 80 Pine St.
> Peterborough, NH 03458

Other Commodore-specific publications have tried to duplicate the success of Magic, but the number and usefulness of the tricks published in Magic cannot be matched.
$R U N$ devotes more pages each issue to reader-submitted hints and tips than any other magazine. Moreover, both last year and this, RUN has produced a special issue containing over 500 Magic tricks.

Whether you're a beginning or advanced computerist, you'll find information you can use in this tightly packed column. The value of Magic lies mainly in its immediacy. The programs are short, so you can quickly type them in and see the results.

The Magic column has been responsible for giving new life to the C-64 and for introducing thousands of readers to the features of the C-128.

If you are a first-time reader of $R U N$ (and this month $R U N$ welcomes over 68,000 new readers), be sure to turn to the Magic column-the original column of readersubmitted hints and tips for Commodore users-and enter the "magical" world of Commodore computing. db

## New Bulletin Board Number

The RUN technical and editorial offices have recently changed locations, necessitating new phone lines and a new phone number for the RUNning Board. We invite you to give us a call at the new number, 603-924-9704, to find out the latest information about $R U N$ magazine and the Commodore industry.

SPREADSHEET or WORDPROCESSOR, so you can display calculations in up to 128 colors... or include graphics in your text.
Touch a key to go from one built-in program to another. Additional software is available for a variety of businesses or personal uses. Games available, too!
ADDITIONAL FEATURES: Data base of 99 records. Computer holds 99 lines of text before it must be transferred to disk drive for storage. Excellent terminal for use with modem. Split screen and windowing capabilities. Compatible with all Commodore ${ }^{\beta}$ hardware except joystick and dataset. NOT compatible with C64 software.
Includes Commodore ${ }^{\circledR}$ warranty.

Compiled by LOUIS F. SANDER

MAGIC is tricks, MAGIC is fun. MAGIC is doing what cannot be done.

Every month, Magic brings you brief and useful computer tricks from around the world-tricks to make computing easier, more enjoyable or more exciting. We number our tricks in hex, the counting system of sorcerers and computerists.

Magic solicits your simple hardware ideas, short programs, useful programming techniques, little-known computer facts and similar items of interest. We look for new or recycled material that can be implemented with a minimum of time, effort or theoretical knowledge and that is of current value to Commodore computerists (Plus/4 and C-16 owners, too). RUN will pay up to $\$ 50$ for each trick accepted. Send your tricks to:

MAGIC
RUN Magazine
80 Pine St.
Peterborough, NH 03458
If you enclose a self-addressed stamped envelope, we'll send you a Trick Writer's Guide. Readers outside the United States may omit the stamp.

Welcome once again to Magic. Our April alchemy includes an Easter Bunny game, a joke for April Foolers and a delicious diversity of daringly dazzling delights. Your fellow readers have sent their best work to $u s$, in hopes that it will be helpful to you. So, enjoy your friends' enhancements, applaud your fellows' a musements and use your colleagues' utilities. If there's a good trick up your own sleeve, write it down and send it in.
\$2CC Star SG-10 special mode-This popular printer has an undocumented mode in which it prints everything sent to it as hex digits, much like a machine language monitor. The mode is useful in debugging faulty print routines, since it lets you see exactly what the printer is receiving, control sequences and all.

To activate the Hex mode, turn your printer off, then press both the formfeed (FF) and linefeed (LF) buttons. Turn the power on, keeping these buttons pressed until the printer's beeper sounds. Release the buttons, and your printer will be in Hex mode until it is either reinitialized or powered down.

James Judd
www.Commodore.ca

\$2CD Modem cable tip-I used to connect my modem by disconnecting the telephone handset cable at the handset, then plugging it into the modem. It was always hard to get to the modem, which was out of the way behind my computer. To make things easier, I bought a coiled handset cord, which I now leave permanently connected to my modem. When the time comes to connect, I unplug the handset from the phone base, then plug in my new modem cord. The phone is more mobile and accessible than the modem.

## Michael T. Martin Phoenix, AZ

\$2CE Modem modification-Some bulletin board systems are very difficult to connect to, since they have far more callers than available lines. Many terminal programs, when they encounter a busy signal, will keep redialing until they get through. This is great, but usually you, the operator, must keep your eye on things so you know when the connection has been made.

You can free yourself for other tasks if you wire a switch and a small piezoelectric buzzer (Radio Shack \#273.060) across the modem's carrier-detect LED. Close the switch before dialing, and when the LED finally goes on, your buzzer will start to buzz. Stop the noise by opening the switch, and proceed with your telecommunicating.
C. A. F.

Throop, PA
$\$ 2 \mathrm{CF} 300$-baud speedup-If you don't have a 1200 . baud modem, here's a little consolation. It doesn't work with all modems or all terminal software, but when it does, it increases your modem speed to 345 baud, a 15 percent increase. (At these slow speeds, every little bit counts!) The trick is to add this line to your terminal program after the modem's Open statement:
POKE 665,240 : POKE 666,11

## THE X-10 POWERHOUSE INTERFACES WITH YOUR COMMODORE TO CONTROL YOUR HOME...FOR SECURITY, COMFORT AND ENERGY SAVINGS.

This remarkable Interface lets you run your home through your Commodore 64 or 128 and a keyboard or joystick.
When you're away, it makes your home look and sound lived in. When you're home, it can turn off the TV at night and wake you up to stereo and fresh brewed coffee in the morning. It can even turn on your air conditioner and control your heating.

SPECIAL COLOR GRAPHICS MAKE PROGRAMMING A SNAP.
You simply pick a room from the display screen. Use your keyboard or joystick to position graphics of lights or appliances. Then follow onscreen instructions to program any light or appliance to go on or off whenever you choose. You can even control thermostats, light intensity and more.

THE WAY IT WORKS. The X-10 Powerhouse Interface is cable-connected to the Commodore "User" port and plugged into a standard 110 V outlet. After it is programmed, the Interface sends digitally encoded signals through your home wiring to special X-10 Modules. To control a lamp or applianioe Cyounsinting pimg qe electrical device into a Module Moy Not Reprint Withoul Permission

and then plug the Module into an outlet. The Interface can control up to 256 Modules throughout your home and won't interfere with normal use of lights and appliances.
There are plug-in Appliance Modules, Lamp Modules, Wall Switch Replacement Modules and Special 220V Modules for heavy duty appliances such as water heaters and room air conditioners. Plus Thermostat Controllers for central heating and air conditioning, Telephone Responders to control your home from any phone, and much more.
IT WON'T TIE UP YOUR COMPUTER. Use your computer only for programming. When you're finished, disconnect the Interface from the "User" or RS-232 port and keep it plugged into any convenient power outlet in your home. It will operate as a stand-alone controller with battery back-up and will run your home automatically.
SURPRISINGLY INEXPENSIVE. A Powerhouse System including the Interface, software and connecting cables costs less than $\$ 150$. X-10 Modules are less than $\$ 20$ each.
For the Dealer Nearest You Call: 1-800 526-0027
or, write to: X-10 (USA)

NUMBER ONE IN HOME CONTROL
Commodore 64 and Commodore 128 are registered trademarks of Commodore Int'I Ltd

The terminal program, of course, has to be written in Basic.

Greg Long<br>Hillsboro, OR

\$2D0 Flight Simulator II coordinates-The manual omits the coordinates for some important landmarks:

World Trade Center- 17060 N, 20982 E
Brooklyn Bridge-17054 N, 20991 E
Empire State Building-17073 N, 20991 E
Statue of Liberty-17049 N, 20971 E
When entering coordinates from the Editor mode, don't start out on the landmark itself, or you'll fall to the street like King Kong.

Kim Moser New York, NY

\$2D1 FlightSimulator IIjet assist-In the Editor mode, if you type 65535 for your throttle setting, you can cruise at 189 knots and climb at 1600 feet per minute. Also, if you select the right fuel tank prior to entering WWI Ace mode, your effective range is doubled.

## Nicholas R. Clarke McKinnon, Victoria Australia

\$2D2 Sky Travel on the bias-In this popular program, you can move diagonally by using the @ sign, asterisk, semicolon and equals-sign keys. It greatly speeds up getting to different items in the sky.

> Roy Liesegang
> Randolph, NJ
\$2D3 Calc Result easy save-Contrary to what the manual implies, you can use the Save with Replace command in this program. When asked for a filename, type "@0:filename". The @ will show up as a hyphen, but the file on the disk will be replaced by the one you're now saving.

## Lowell Unger <br> Wynyard, Saskatchewan Canada

\$2D4 Selecting sheet music-Commodore computers have a great deal of musical talent, but they are limited to three voices (four for the Amiga), or, in other words, to three notes playing at once. Unfortunately, most sheet music is arranged for the keyboard world, where up to ten notes can be playing at once (one for each finger), and where a huge double staff is used. When you computerize such music, choosing the three most important notes can drive you back to spreadsheets.

If you want to make life easier, buy your sheet music in the finger-picking guitar department of a well-stocked music store. Most finger-picking guitar arrangements are in a threexoice format with all voices noted on one staff. The
finger-picking style puts a complete lead, harmony and bass arrangement on a single instrument and is tailor-made for Commodore computers.

Dave Rensberger<br>Brea, CA

\$2D5 Bunny Hop-This game for the C -64 or C-128 in 64 mode lets you put the Easter Bunny into his basket. To make him hop, hold down any key for a second or so. The longer you hold it, the farther Mr. Rabbit jumps. If he misses the basket, he returns to his starting place and lets you try again. When you put him into the basket, the program tells you how many hops it took.

You can make the game more difficult by increasing the value of X in line 35 . That moves the starting point closer to the basket, making the target harder to hit.

\$2D6 April 1 Magic-If you appreciate practical jokes, you'll have endless fun with these April Fools subroutines. The first one simulates the Ready prompt, leading one to believe that the main Basic program is finished. However, nothing could be further from the truth.
The first subroutine is composed of lines 699-750. These give the bogus Ready prompt, which, for the next 30 seconds, waits for you to press any key. If you do, an interesting message appears on the screen, and the 30 second timer is reset. If no key is pressed, the subroutine finishes so quietly that nobody is the wiser.

To get the second subroutine, replace lines 740 and 750 with lines 770 and 780 . This time, the subroutine also waits 30 seconds. If a key is pressed during this period, the subroutine terminates unobtrusively, and your computer will accept normal keyboard input. But if the Magic key defined in line 700 is pressed, program execution is transferred to line 780. You can put anything at all there, including hundreds of additional program lines.

As printed, the program runs on the C-64 or VIC-20.
Continued on p. 96.

The world's first computer assisted computergame.

# The Management Edge <br> <br> B 

 <br> <br> B}

This Program Will Help You Sharpen Your Management Skills

The people at Info Designs take their software seriously. This company, which already has a line of good business software for the C.64, has gone one step further with the release of "The Edge" series of programs. There are four packages available: Sales, Communication, Negotiation and Management. Operation of all four packages is quite similar. I'll focus on The Management Edge program.

The techniques that these programs use actually border on artificial intelligence. By answering a series of questions about your own likes and dislikes, The Management Edge analyzes and categorizes your management technique.

You need only answer the questions about yourself once. You can then begin to develop management strategies for one or more of your employees.

In the next step, you are asked to respond to a series of adjectives that might describe the employee. Either you feel the adjective accurately describes the employee or you don't, and you respond accordingly.

Once the survey is complete, you can receive a management-strategy report. It can be directed either to the screen or to a printer.

The main program resides on one disk; a second disk contains a variety of text files that are used to assemble the report.

Your own style and that of the employee generate internal codes within the program. The report is assembled from these codes.

Because the report is assembled from text files contained on disk, it takes about 20 minutes to generate a report. This is due to the excruciatingly slow speed of the 1541 disk drive. Disk access is necessary because the text in the program eats up a lot of memory and it's simply not feasible to load all possible combinations into the computer at the same time.

## Report Card

Superb!
An exceptional program that outshines all others.

## Very Good.

One of the better programs available in its category. A worthy addition to your software library.

## Good.

Lives up to its billing. No hassles, headaches or disappointments here.

## Mediocre.

There are some problems with this program. There are better on the market.

Poor.
Substandard, with many problems. Should be deepsixed!

While Info Designs should not be held accountable for this inherent limitation in Commodore's equipment, you should be aware of such delays. The first time I ran the program, I thought something might be wrong with it.

The report that The Management Edge generates is several pages long. When sent to the printer, it is formatted for 80 columns. Page numbers are generated and form feeds keep the report from printing on the paper's perforations. Only Commo-dore-type printers are supported by the program.

A typical report includes suggestions on how to motivate the employee according to his or her own personality, suggested disciplinary measures (when necessary) and even how to fire a worker. The report also points out your flaws and weaknesses in your dealings with people.

I also took a look at The Negotiation Edge. Its operation is virtually identical to The Management Edge. The focus, however, is on items important to negotiation rather than management. The report generated is quite impressive. It gives you a master plan that you can take with you into your next meeting. You should find the other programs in the series equally helpful in organizing your business strategies.

You may not always agree with the suggestions made by these programs. All such evaluations are based on one person's idea of good management, negotiation, sales or communication. While the questionnaires use a large enough base to have a reasonable chance of being accurate, it is impossi-

# 22 FASLPACED, BCUINCEVELIS COFORTHECODS <br> \section*{} 

## BSoftware Gallery

ble to identify correctly every possible personality in such a short time.

If you think of these programs as tools, much like seeking the advice of someone you trust, they will serve you well. Simply remember that you don't always take the advice offered by others.

Info Designs is to be congratulated for offering these innovative applications for the Commodore 64. (Info Designs, 445 Enterprise Court, Bloomfield Hills, MI 48013. C-64/\$79.95 disk.)

Springfield, IL

## Newsroom

Design and Print Out Professional. Quality Newsletters

The program developers at Springboard have created a software package that makes desktop publishing on inexpensive personal computers a reality. The Commodore 64 version of Newsroom was recently released.

The C-64 version of Newsroom will not give you the versatility and quality available from the Amiga or Macintosh. It will, however, allow you to create, one page at a time, newsletters that will be professional in appearance.

You start the creation of your newsletter by selecting one of several work areas available from the main menu. You may choose to develop a banner, create photos, input copy, transfer partial or entire newsletters via modem, lay out a page or print your creation.

The Banner option allows you to create an individual identity for your publication. Hundreds of pieces of artwork are available to help you customize the banner. A versatile graphics area, similar to the kind used in KoalaPainter and Doodle, allows you to create your own designs. It includes five type styles so that you can add words and numbers directly to your pictures.

Most of the graphics included with wwneformidgre.ca

Newsroom are somewhat whimsical, making them especially attractive to student editors. Future additions to the graphics library promise more business-oriented art for us older children.

In the photo-lab work area, you can create customized pictures. You can make the pictures as small as you like, or large enough to fill an entire panel. A typical newsletter includes a banner across the top and a total of six panels.

The Copy Desk option is a complete word processing system for entering text. You can place photos before entering copy, so that you can set up text around the pictures. Several type styles are available in both small and large sizes.

Each page is broken into individual panels. So, if your article is going to take up more space than one panel allows, you'll really have to plan the layout of your page ahead of time. The end result looks smooth and professional, even though you may have to resort to breaking text between panels.

The banner and all the panels are stored individually on disk, so you may call them up in any order. Once created, you place them in final form by using the layout work area. Regardless of how you originally created them, you can arrange panels in any order in the final layout.

You'll find that it takes some time for your final product to be printed, and you'll have to switch disks several times during the process. However, full screen prompting makes the task quite simple.

The Wire Service option of Newsroom is one of its most impressive features. Selecting this feature places you in a highly specialized telecommunications program. If you have a modem, you can transmit anything created with Newsroom to another modem-equipped computer. Because of Springboard's unique coding system, any files created with Newsroom can be exchanged without regard to the brand of computer at each end. Both machines, however, must use the special software included in Newsroom.

For students and schools with a variety of computers, this feature goes a long way toward uniting the
editorial team. It's an idea whose time has finally come.

The instruction booklet for Newsroom is 86 pages long. Overall, it is thorough and well-written. The onscreen instructions make it easy to navigate, although I would like to have seen more specific examples. It took me several hours to create enough material to finally get to the printing stage of production. Sample panels would allow you to experiment with all the features of the program without having to do so much initial work.

You can purchase separately an auxiliary disk containing another 600 pieces of clip art, which are a bit more serious than the art included with the program itself. Springboard will issue additional collections from time to time.

Newsroom has taken up an honored position in my software collection. I've already used it to plan several sales brochures. It's sure to please all ages of Commodore computerists. (Springboard, 7808 Creekridge Circle, Minneapolis, MN 55435. C-64/ $\$ 49.95$ disk.)

## Wordpro 128

Tap Your C-128's
Potential with This
Powerful Word Processor

Wordpro 128 is the first of a new generation of word processing software from Pro-Line. Written by Commodore programmer Steve Punter to take advantage of the increased speed and memory of the C-128, this package is an expanded version of Wordpro 64. It is also a major league word processor.

If you've long endured working on a 40 column screen, you'll really appreciate the convenience of 80 col umns. Text occupies the entire width of the screen, and words that can't fit at the end of a line are automatically wrapped to the next line. You can preview documents up to $80 \mathrm{col}-$ umns wide on the screen exactly as

# G7 PROFESDONASPRADSH =7 POHLR WhHOUPING Prozessuonal pilez. 

## INTRODUCING MICROSOFT ${ }^{\text {® }}$ MULTIPLAN ${ }^{\text {² }}$ FOR THE COMMODORE 64 AND 128.

With the new, fast-loading Microsoft Multiplan, you can add professional spreadsheet power to your Commodore 64 and 128 -the same Multiplan used by over a million IBM PC, Apple II and Macintosh owners.
And with the built-in EPYX Vorpal ${ }^{m \mathrm{~m}}$ Fast Loader, which loads the program in moments, this new Multiplan delivers business-level power and features at a price you can afford.

Use Multiplan to create spreadsheets for budgeting, taxes, financial planning or cost estimating. Get fast answers to all kinds of "what if" questions-from personal finance to complex depreciation allowance
tables and much, much more.
You'll receive a comprehensive Multiplan manual that clearly illustrates all the features, functions and formulas.

Plus you'll get a Quick Start manual that gets you up and running with Multiplan in minutes. And easy-to-use templates with built-in formulas and functions let you start working right away.

Microsoft Multiplan for the Commodore 64 and 128 . You get professional spreadsheet power without paying professional prices.

"'You Guessed It!? It's just like a TV game show.

## BSoftware Gallery

they will be printed, and a side-scrolling feature allows you to preview wider formats.

Despite its heritage, Wordpro 128 isn't merely a rewrite, as it also offers many new features.

With almost 36 K devoted to memory, Wordpro 128 can hold documents two-and-one-half times larger than its predecessor. Other new features include the ability to embed non-printing comments within text and the addition of a Pause command to stop a printout.

Of course, Wordpro 128 has all the features that made Wordpro 64 so popular-printer modules that support proportional printing, doublecolumn output, alternating page formats to allow double-sided printing and binding, and the ability to design and print custom characters.

It also has all the standard word processing features, such as headers, footers, variables, form letters and block deletions. In addition, Wordpro 128 can read documents created with previous Wordpro software, as well as any sequential text files.

A welcome feature is the temporary holding area for deleted text. When not holding deletions, you can use this buffer to hold the disk directory in memory to speed up file recall and storage.

A simple keystroke switches you into the Extra Text mode, where you can work on another document, refer to a previously stored outline or transfer text from one document to another. It's almost like having two word processors in one.

In an effort to continue to support 40 -column screens, Pro-Line is ship ping Wordpro 128 disks with an enhanced version of Wordpro 64 on the back. This version must be run in C-64 mode, and, as a result, Wordpro 128's strongest features are unavailable. A real 40 -column version is now in preparation.

The copy-protection scheme is annoying, to say the least. If you are running Wordpro 128 on a 1541 drive, you'll experience the familiar sound of the drive's head battering itself against the stop. This is a result of the compromise necessary to publish protected software that will run on the 1571 as well as on existing drives.

The only feature I found lacking is one that would allow you to move the cursor from word to word or to the beginning of a sentence with a single keystroke, eliminating the relative slowness and imprecision of jockeying the cursor keys.

I was also disappointed to discover that the disk-directory buffer shares space with the Delete function. This was a compromise in Wordpro 64 that was necessary because of the C-64's limited memory.

Blemishes and bugs notwithstanding, Wordpro 128 is a high-quality package. It's fast, easy to learn, fullfeatured and well-documented. If you liked Wordpro 64, you're going to love Wordpro 128. (Pro-Line Software, 755 The Queensway East, Unit 8, Mississauga, Ontario, Canada L4Y 4C5. C-128/\$99.95 disk.)

## Silent Service.

balancing up to five bank accounts, keeping track of ten credit cards, helping you budget your money, and much more. The program gives you database power to manipulate transaction records and spreadsheet functions to do financial planning. If you need money-management software to handle your finances, Your Personal Financial Planner should suit your needs.
Be aware that, like any major application, this program is complex. Although its excellent documentation and handsome screens (which feature pull-down menus) make it easy to use, you'll still have to invest some time to learn all its functions. This program suffers somewhat from the 1541's slow speed; data entry is quite time consuming, because you enter information in relative files, with frequent disk access. Also, you must swap between four program disks and three data disks.

I simply don't have room to talk about all the nifty features of this program. Instead, I'll just discuss some of the special options.

I give the program's documentation several gold stars. Whether you're a novice or an old pro, it should meet your needs on most points. The manual is well-written, clear and generously illustrated. It has a nice index,
a trouble-shooting guide and a quick. reference section that reviews procedures for every function in the program. Every screen includes a list of command keys. One thing I love about the program is that you can escape from any function at any time.
The program lets you search data on any record field, and you can use several transaction disks in the same search. This program compares well with a sophisticated database for ease of use and flexibility in manipulating data.

You can dump any data screen to the printer and save report formats for printing data collections. Printouts include income statements, balance sheets and insurance or stock summaries. You can also print out checks-the manual tells you where to buy appropriate forms. Incidentally, you can read data from the program into Timeworks' Word Writer word processing program.
You don't have to be an accountant to set up a chart of accounts. The program provides codes that will cover most personal needs; you can design your own as well. The default account numbers let you read transactions into the Budget, Asset and Liability, and Financial Planner sections without additional keystrokes.

The Financial Planner section gives
you the "what if" power of a spreadsheet. You can specify a goal amount and date, make a guess at inflation and average rate of return, and develop worksheets for projects such as sending your kids to college or buying a house. Worksheet summaries help you set priorities.

Your Personal Financial Planner can't increase your income. It could, however, help you make better use of the money you do earn. If your personal affairs are complex enough to need managing, you can't go wrong with this program. (Timeworks, 444 Lake Cook Road, Deerfield, IL 60015. C.64/\$59.95 disk.)

## Annette Hinshaw <br> Tulsa, OK

## Silent Service

Command a World War II Submarine In the Pacific

The software company that took you soaring to new heights with such hits as F. 15 Strike Eagle and Mig Alley Ace now brings you Silent Service, a WWII submarine simulation that allows you to patrol the dangerous enemy-controlled waters of the Pacific.

In Silent Service, your sub is controlled from several different battle stations, which you can select from a central conning tower. Each battle screen is an excellent graphics representation of some part of a submarine and provides you with access to information and functions that you'll need to command your sub to victory.

The map screen shows you the location of your sub as you patrol a $300 \times 500$-mile area of the western Pacific. When you sight enemy ships, you can zoom in to any one of four levels of detail. The most detailed display reveals a $5 \cdot \times 8$-mile area and shows your submarine, the location of enemy ships and the path of your torpedoes.

Once enemy ships approach close enough to be tracked on the map, you can use the periscope to spot the you can use the periscope
May Not Reprint Withoul Permission
ships (if you're submerged to a depth of 44 feet or less). Or, if the sub is cruising the surface, you can climb up to the bridge and use the binoculars. Once a ship comes into range, the torpedo-data computer will list the target's distance in yards, its speed and the number of degrees you should lead the ship with your torpedoes to score a hit. You can also get a target identification on the ship.
To help keep you abreast of information vital to the submarine's operation, there is an instrument and gauge screen. Instruments include a battery-level gauge, indicator lights that show whether the batteries are being recharged or drained, a tor-pedo-ready indicator, a fuel-level indicator, a water-temperature gauge, a compass and a clock. Since many of the scenarios can last several days, you'll want to keep track of the time to plan nighttime maneuvers and predawn convoy attacks.
Finally, there is a damage-report screen, which displays both an exter-
nal view of the sub and a cutaway internal view. This indicates damage to such parts as torpedo tubes, periscope, dive planes and fuel tanks. In addition, if your sub is taking on water, the amount of leakage (in gallons per second) is displayed.
In all, there are close to 30 keyboard commands that you can enter to control everything from the sub's direction, depth and speed, to various emergency procedures.
Although it seems like a lot to handle at first, the excitement and realism of this simulation force you to master the controls quickly and, as usual, MicroProse's superb tactical operations manual prepares you for anything. Realistic action coupled with outstanding graphics and sound make Silent Service as enjoyable as even the best flight simulator on the market. (MicroProse, 120 Lakefront Drive, Hunt Valley, MD 21030. C.641 $\$ 34.95$ disk.)

# Home Sweet Home Control 

> Sleep those extra minutes while your C-64 brews your morning coffee. Leave for the weekend knowing your computer is standing guard. See how these two commercial packages can make your life more convenient.

By CHRISTINE and JOHN ADAMEC

Sure, it's fun to play video games with your C-64, but have you ever considered exercising some real control over your environment? Maybe you'd like to program your coffee pot to come on automatically at 7:30 AM, and then have it shut itself off at 8 o'clock. Or perhaps you'd like the lights to come on promptly at 6 PM , and go off again at 11 o'clock. And, while you're off visiting Uncle Henry and Aunt Em in Kansas, you might like to have a computerized security system stand guard-another interesting and practical application.

All this can happen today with either the X-10 Powerhouse, from X-10, or the Home Control System, by Genesis Computer Corp.

## X-10 Powerhouse

The X-10 Powerhouse is composed of a control unit with its own built-in microcomputer, a cable for hookup to your $\mathrm{C}-64$ and the software you'll need to operate it all. (Also included, of course, are the manuals you'll need to learn how to use everything.)

You'll also need plug.in modules, which allow your system to control appliances or lights throughout your house. The modules cost about $\$ 15$ each, and you can buy them at Sears, Radio Shack or a major department store; or you can contact X-10 (201-784-9700). More complex devices, such as the thermostat module, are also available for about $\$ 50$, but I'll just describe what we watwalthofofteddore.ca

The modules are small, box-like devices that allow your computer/controller-by a combination of electronic and remote-control means-to transmit commands and control your appliances or lights without any rewiring of your home.
You don't have to be an electronics genius to hook up Powerhouse. Simply plug the modules into your wall sockets and then plug the appliance or light cord into the module. A child could do it!
Load the software and you'll be asked whether you want the Install or Operate mode. To set up, you need to start with Install. A clock was displayed on the screen and we were asked if it showed the correct time; if not, we could change it.
We were also asked if the "house code" was set at "A," meaning whether all our modules were set at the letter A when we identified locations. (There is a range of A1A16; if you have more than 16 modules in your home, you can start using the letter B. Letters up to P are available, making for 256 possible combinations.)

Next, we moved to the program's colorful menu of rooms. These include a children's room, master bedroom, guest room, dining room, living room, kitchen, front of house, back of house and spare room. If you have more than one child's bedroom, you can use the spare room or guest room graphic to represent each of the other bedrooms.

We decided to start with the dining room. Moving the

X-10 Powerhouse.
joystick (you can also use the keyboard), we positioned the on-screen arrow to the site (out of 11 possible locations in the dining room) where we wanted to place our module. We chose the overhead lamp position, and the computer asked if this was a lamp or an appliance.

The computer told us that this module would be named A1. (We also could change this number.) Next, we physically checked to make sure that particular module was set at A1.

Now we "walked" out the door, using the joystick to move from room to room. We decided the living room TV would be assigned A2, and the living room floor lamp A3. (And, of course, we set the modules to the appropriate corresponding codes.)

Next, we needed to program how and when we'd want events to occur. So we moved to the Operate mode, and received the House menu of all the rooms again. Returning to the dining room (which now displayed a colorful Tiffany lamp with the code of A1), the computer asked us if we'd like that light on full or dim, and at what level of intensity (from $10-90 \%$ ). The Powerhouse can also be programmed to shut itself down on given days-maybe you need it only during the week, or only on weekends.

On which days and at what time did we want the light on? We selected daily and at 6 PM. Next, we went through these same routines with our other two modules.

What did we think of the $\mathrm{X} \cdot 10$ ? Very impressive! We especially liked the ease of operation and the way the software walked us through the entire process.

Two of the manuals are clear and helpful, going as far as warning you to be alert: "If an electric heater is turned on by remote control while clothing just happens to be draped over it, a fire could result."

But the third programming manual included with the package is more difficult to understand. One of us, an engineer, found this manual fascinating; the other found it baffling. Still, you can easily operate the system without ever using this manual.

We also liked the fact that the controller continues to run independently even when the computer is turned off after set-up. This is because the controller is actually a computer itself powered by the wall outlet, with a nine-

volt battery for a backup. And since the controller uses only the computer's expansion port, the cartridge port remains free. Thus, we could still play Frogger, an old favorite.

But the real proof is in action-did the system work? Yes, the lights clicked on promptly at 6 PM, whether or not we had the computer's power turned on. In fact, we were so pleased with the X-10 Powerhouse that we used it as a security system while we were away for several days.

Energy saving is another important application. If you've told your children about 900 times to turn off their bedroom lights in the daytime, you'll really appreciate using this time-driven option.

The system is very easy to operate and understand. However, all events on the X•10 are time-controlled; unlike Genesis' Home Control System (described in the next section), you can't program the computer to react to outside sensors.

Any areas of improvement for the Powerhouse system? We do have one suggestion for the manufacturer: Combine the three manuals into one. We didn't like flipping back and forth between manuals, and would prefer that everything were included in one comprehensive book, with the more complicated material at the end.

The X-10 interface, software and connecting cable are available for $\$ 70$. Appliance and light modules cost about $\$ 15$ each; modules that perform other functions are available for up to $\$ 50$ each. X-10, 185A Legrand Ave., Northvale, NJ 07647.

## Home Control System

The Home Control System, from Genesis Computer Corp., consists of the VIController package, the COMclock hardware/firmware (a real-time clock with battery backup), the COMsense hardware package and associated software. You can use these packages as stand-alone units or combine them to create a powerful home-management system. (A creative Florida tomato grower plans to use his C-64 and Genesis system to control irrigation on 200 acres!)

The basis of the system is the VIController. You'll also need modules, as you did with the X-10 system. So head for your local Radio Shack or Sears to purchase one or more modules, as Genesis does not sell them directly.

Security is one obvious application of the Home Control System. We liked being able to vary the times that the lamps and appliances turned on and off. For example, we ordered the light swiched off at 11:30 on Friday and Saturday nights, and at $10: 30$ the rest of the week. The advantage of this option is you can make your behavior less predictable and your absence less noticeable. (This option was also available on the X-10.)

The software for the Home Control System consists of three programs: Manual Control Program (MCP), Time Control Program (TCP) and Super Schedule Program. The Manual Control Program allows you to control the modules and turn lamps and appliances on and off. The Time Control Program enables you to set up a daily schedule for the action to happen.

The Super Schedule Program lets you set up a sevenday schedule for your system (for example, ordering an action to occur Monday, Wednesday and Thursday).

As with the X-10, we needed to make sure that our module codes were correct. This time, we decided to use "L4" for our kitchen radio. The first few times the radio switched on, right on schedule, were very dramatic events!

Tel. 503-683-1154
most home computer installations, if you lose your electricity for either minutes or hours, your computer's memory is erased and your data is lost forever.

However, the COMclock plugs into your cartridge slot and provides you with a battery-powered, real-time datel time clock. In the event of a power outage, it will also autoboot the disk in your drive (or the tape in your recorder) at powerup. (You must change the name of the scheduling program to "AUTOBOOT". Consult your Commodore manual to see how to do this.)
We used the COMClock for several months and experienced several power outages in our thunderstormprone area; the autoboot function performed flawlessly. And, when the computer reloads, it also regains control of the modules and maintains the correct time via the battery-powered COMclock.

The final and most unusual part of this system is COMsense. This unit allows you to simultaneously connect, through the joystick port of your C-64, as many as six individual sensors (two analog and four digital) that respond to outside stimuli.

The hardware part of COMsense is a well-constructed module containing a terminal block and a cord with joystick connector. The sensors are connected to the terminal block with wires that you supply. We found that we also needed a voltmeter to set up the analog sensors for this unit. (According to company executives, Genesis is currently preparing a turnkey radio-frequency plug-in unit to replace COMsense. This should satisfy most nontechnical computer owners.)

To use your COMsense hardware, you'll need the Super Schedule Program. You can run it as a machine language routine in the background, while simultaneously using your computer to run other programs written in Basic.

We purchased such digital sensors as a magnetic switch and an associated magnet to use with our COMsense package. (This kind of switch is commonly used in burglar alarms.) After we set it up, the following occurred: When a window was opened, the magnet moved away and the switch opened. As a result, whatever alarm signal we'd arranged was triggered.

We also purchased a package of five cadmium sulfide photo cells (part \#276-1657) from our local Radio Shack store to test COMsense's analog capability for testing light levels. Using the instruction manual and our voltmeter, we adjusted the COMsense module and programmed the computer to sense a wide range of light levels. Then we directed the computer to turn on increasing numbers of lights as it became darker outside.

Why? Just because it's 6 PM, it doesn't mean it's always dark outside. And, on stormy days, it might become dark earlier than usual. Thus, time isn't always the best indicator of when to switch on the lights.

Something else we are experimenting with is a tem-perature-sensitive application, because we'd like to see if we could better control our central heating and air-conditioning systems. For example, during the summer, we'd like to reduce those painfully high Florida air-conditioning expenses. (If you live up north, you might have some interest in cutting back on your heating bills.)

We decided we could use this package to let us know when the inside air temperature falls below the outside temperature. For example, if it were, say, 75 degrees outside and 80 degrees inside, we'd have a radio turn on as a signal to us to shut off the air conditioning and open
swwormmodore.ca

## Jet

## A New Dimension in Fun

Easy aircraft control, coupled with unexcelled omnidirectional visual (plus audio) references and ballistic power, provide the speed and aerobatic maneuverability that add up to pure fun. Engage in a wide variety of combat scenarios (land-based F-16 or carrier-based F-18), or fly over detailed United States scenery at Mach 2.

sublOcIC
Corporation 713 Edgebrook Drive Champaign IL 61820 (217) 359-8482 Telex: 206995
the windows. Or, we could have the computer turn off the air conditioner and turn on the indoor fans.

Conversely, if you're using a wood stove (perhaps in your basement) for heating, you could program the computer so that when it sensed the temperature was above 85 degrees next to the stove, it would turn on fans to propel the hot air upwards.
We were impressed with this sophisticated system and the great degree of control it provides. Disadvantages? The computer must be on at all times, and both expansion and cartridge ports are necessary to take full advantage of this package.
We also think it would be helpful if Genesis would suggest where we could buy, either locally or by mail, the sensors we needed for the COMsense module. Genesis officials told us that many large electrical-supply stores either stock or will order high-capacity BSR modules and other devices.
The VIController, COMsense and COMclock are available for $\$ 69.95$ each; the Super Schedule Program retails for $\$ 19.95$. Or, you can purchase the entire Genesis Home Control System for $\$ 199.95$. Genesis Computer Corp., Ben Franklin Technology Center, Lehigh University, Bethlehem, PA 18015.

## Conclusion

Both systems are creative and exciting state-of-the-art applications for the C-64. (By the way, the Genesis Home Control System can also run on an expanded VIC-20.)

The X -10 Powerhouse is more of a turnkey operation, in the sense that the software walks you through the program and you can purchase the necessary modules directly from the company. Another advantage of the $\mathrm{X} \cdot 10$ system is that, except when you are setting up or making changes, it leaves your computer available for other uses.
The Home Control System is comprehensive and more sophisticated in that events are not only time-driven, but you can also use outside sensors to determine when or if an action occurs. Other applications are limited only by your own imagination.
The principal disadvantage of the Genesis package is that your computer must remain on 24 hours a day, and you're limited in the software you can run while the system is in operation.
If you'd like an eminently practical application for your computer, why not try one of these home-control systems? Compare their offerings and decide which will fulfill your particular needs. Both can provide you with savings in energy and money, as well as with added security for your home. Then, once your system is up and running, you can relax and enjoy computerized control of your futuristic home.

# A Printer For All Reasons Search For The Best High Quality Graphic Printer 

If you have been looking very long, you have probably discovered that there are just too many claims and counter claims in the printer market today. There are printers that have some of the features you want but do not have others. Some features you probably don't care about, others are vitally important to you. We understand. In fact, not long ago, we were in the same position. Deluged by claims and counter claims. Overburdened by rows and rows of specifications, we decided to separate all the facts - prove or disprove all the claims to our own satisfaction. So we bought printers. We bought samples of all the major brands and tested them.

## Our Objective Was Simple

We wanted to find that printer which had all the features you could want and yet be sold directly to you at the lowest price. We didn't want a "close-out special" of an obsolete product that some manufacturer was dumping, so we limited our search to only those new printers that had the latest proven technology. We wanted to give our customers the best printer on the market today at a bargain price.

## The Results Are In

The search is over. We have reduced the field to a single printer that meets all our goals (and more). The printer is the SP-1000 from Seikosha, a division of Seiko (one of the foremost manufacturers in the world). We ran this printer through our battery of tests and it came out shining. This printer can do it all. Standard draft printing at a respectable 100 characters per second, and with a very readable 12 (horizontal) by 9 (vertical) character matrix. This is a full bi-directional, logic seeking, true descender printer.

## "NLQ" Mode

One of our highest concerns was about print quality and readability. The SP-1000 has a print mode termed Near Letter Quality printing (NLQ mode). This is where the SP- 1000 outshines all the competition. Hands down! The character matrix in NLQ mode is a very dense 24 (horizontal) by 18 (vertical). This equates to 41,472 addressable dots per square inch. Now we're talking quality printing. It looks like it was done on a typewriter. You can even print graphics using the standard graphics symbols built into your computer. The results are the best we've ever seen. The only other printers currently available having resolution this high go for hundreds more.

## Features That Won't Quit

With the SP-1000 your computer can now print $40,48,68,80,96$, or 136 characters per line. You can print in ANY of scores of styles including double width and reversed (white on black) styles. You not only have the standard Pica, Elite, Condensed and Italics, but also true Superscripts and Subseripts. Never again will you have to worry about how to print $\mathrm{H}_{2} \mathrm{O}$
 May Not Reprint Wilnowl Permission
automatically, through easy commands right from your keyboard. Do you sometimes want to emphasize a word? It's easy, just use bold (double strike) or use italics to make the words stand out. Or, if you wish to be even more emphatic, underline the words. You can combine many of these modes and styles to make the variation almost endless. Do you want to express something that you can't do with words? Use graphics with your text - even on the same line. You have variable line spacing of 1 line per inch to infinity (no space at all) and 143 other software selectable settings in between. You can control line spacing on a dot-by-dot basis. If you've ever had a letter or other document that was just a few lines too long to fit a page, you can see how handy this feature is. Simply reduce the line spacing slightly and ... VOILA! The letter now fits on one page.

## Forms? Yes! <br> Your Letterhead? Of Course!

Do you print forms? No problem. This unit will do them all. Any form up to 10 inches wide. The tractors are adjustable from 4 to 10 inches. Yes, you can also use single sheets. Plain typing paper, your letterhcad, short memo forms, labels, anything you choose. Any size to $10^{\prime \prime}$ in width. In fact this unit is so advanced, it will load your paper automatically. Multiple copies? Absolutely! Use forms (up to 3 thick). Do you want to use spread sheets with many columns? Of course! Just go to condensed mode printing and print a full 136 columns wide. Forget expensive wide-carriage printers and changing to wide carriage paper. You can now do it all on a standard $81 / 2^{\text {" }}$ wide page, and you can do it quietly. The SP-1000 is rated at only 55 dB . This is quieter than any other impact dot matrix printer that we know of and is quieter than the average office background noise level.

## Consistent Print Quality

Most printers have a ribbon cartridge or a single spool ribbon which gives nice dark
printing when new, but quickly starts to fade. To keep the printers output looking consistently dark, the ribbons must be changed quite often. The SP-1000 solves this problem by using a wide ( $1 / 2^{\circ}$ ) ribbon cartridge that will print thousands of pages before needing replacement. (When you finally do wear out your ribbon, replacement cost is only \$11.00. Order \#2001.)

## The Best Part

When shopping for a printer with this quality and these features, you could expect to pay much more. Not now! We sell this fantastic printer for only \$219.95! You need absolutely nothing else to start printing - just add paper (single sheet or fanfold tractor).

## No Risk Offer

We give you a 2 -week satisfaction guarantee. If you are not completely satisfied for any reason we will promptly refund your purchase. The warranty has now been extended to 2 years. The warranty repair policy is to repair or replace and reship to the buyer within 72 hours of receipt.

## The Bottom Line

Be sure to specify the order \# for the correct version printer designed for your computer. Commodore C-64 \& C-128, Order $\$ 2200$, graphics interface \& cable built in. $\$ 219.95$
IBM-PC and compatibles. Order $\# 2100$, $\$ 239.95$ plus 8 ' shielded cable \#1103, $\$ 26.00$ Apple IIc \& Macintosh Order $\# 2300, \$ 239.95$ with cable 75 CPS.
Standard Parallel with 36 pin Centronics connector, Order $\# 2400$, $\$ 239.95$ no cable
Standard Serial with RS-232 (DB-25) Connector, Order \#2500, $\$ 239.95$ no cable
We also have interfaces and cables for many other computers not listed. Call Customer Service at 805/987-2454 for details.
Shipping and insurance is $\$ 10.00-$ UPS within the continental USA. If you are in a hurry, UPS Blue (second day air), APO or FPO is $\$ 22.00$. Canada, Alaska, Mexico are $\$ 30.00$ (air). Other foreign is $\$ 70.00$ (air). California residents add $6 \%$ tax. The above are cash prices - VISA and MC add $3 \%$ to total. We ship the next business day on money orders, cashiers' checks, and charge cards. A 14 -day clearing period is required for checks. Prices subject to change-CALL.

# Songfest By JOE KACZYNSKI 

Songfest is designed for the broadest of audiences, ranging from the musical novice to the professional musician. This program allows you to utilize to the fullest extent the lit-tle-understood SID (sound interface device) chip.

Now, your Commodore can use up to three voices to play any song. You need only take the sheet music of your favorite song and, following simple menu-driven questions, enter that song. You can then play it back, modify it to your individual taste, if desired, and then save it to the disk for playback at any time.

Since songs require an unusually large amount of disk space and are sequential in nature, you must use disks to hold them. I suggest you start by formatting a new disk before you proceed with this program.

As you may already know, the Commodore 64 SID chip is the heart of the 64's music capabilities. This highly sophisticated integrated circuit makes the Commodore a unique instrument indeed. It provides the 64 with a three-voice (three-instrument) and full eight-octave electronic music synthesizer.

More information on the capabilities of the 64 and the SID chip may be found in various chapters of the Commodore 64 Programmer's Reference Guide. You may want to refer to this

> With this multifunctional music editor, you can jam with your Commodore or just sing along with some prerecorded songs. If you're especially musical, you can create songs in three-part harmony.

guide if you wish to do some additional experimentation with various parameters involved with the attack/ decay and sustain/release (A/D and S/R) settings. Fortunately, you won't need to read any more than this article to fully utilize your 64's music capabilities.

Songfest has many features that make it very easy to use. To get an accurate reproduction of a particular song, you must enter each note. However, you must also realize that music is made up of a complex combination of notes, rests, tempos, rhythms and octaves. All of these combine to make a song. The correct combination of all these variables is available to every. one, directly from sheet music. Songfest makes it easy to set this data into your 64 in the appropriate form.

When you have entered Songfest into your 64 and saved it, run the program. You will see the following:

[^3]Any time you wish to leave Song. fest and return to Basic, simply press $Q$ (quit and exit program) while viewing the main menu.

## Menu Explanation

$R$-read preprogrammed song from disk. If you wish to load a preprogrammed song that you have previously saved, you select this option on the main menu. When you do this, be sure to select the number of voices in which you saved the song.

There is, of course, no way for Songfest to know how many voices your own creation used. When the screen displays the question, "How Many Voices Would You Like?", you are simply being asked how many voices were actually stored to the disk when you last saved the song. If you

## RUN It Right

C.64; C.128 (in C.64 mode)

Disk drive only

try to read more voices than you actually stored, you'll get an error. Similarly, if you try to read fewer voices than you wrote, you will also get an error.

You will then be asked for the name of the song. Type in its name exactly as it appears on the disk's directory, but without the quotes. Once your song is loaded, it will begin playing automatically. When it is finished playing, you may select P or C .
$P$-play song once or $C$-continuous play. These two menu options seem clear enough, but there are a few things you might like to know about them. First, you can play back any song in the number of voices in which it was recorded (saved). You can also play it back in fewer voices, but you can't play it in more voices, since those voices are just not there. If you choose $C$, pressing the space bar at any time will end the song and return you to the main menu.
$I$-input notes of your own song. When this option is selected, the screen clears and displays the following messages. These enable you to set up all the necessary parameters critical to the types of voices your songs will play $i n$. Parameters for voice 0 are now:
W/F-0, A/D-0, S/R-0
Select waveform ( $17,33,65$ )
Select A/D (0-255)
Select S/R (0-255)
Also, if the waveform 65 is selected, the following additional message appears:
High Pulse ( $0-15$ ); a suggestion is 8
Low Pulse (0-255); a suggestion is 128
When you initially enter your songs, I suggest you use the following values, although later you may wish to experiment with others. Incidentally, if you only wish to change one of these parameters in a voice, you may press the return key until you get to the specific parameter you wish to change.
Voice $0 \mathrm{~W} / \mathrm{F}=17 \mathrm{~A} / \mathrm{D}=9 \mathrm{~S} / \mathrm{R}=240$
Voice $1 \mathrm{~W} / \mathrm{F}=33 \mathrm{~A} / \mathrm{D}=10 \mathrm{~S} / \mathrm{R}=120$
Voice $2 \mathrm{~W} / \mathrm{F}=33 \mathrm{~A} / \mathrm{D}=10 \mathrm{~S} / \mathrm{R}=85$
When the above information has been entered, the following message will appear: "Enter Notes For Voice 0 , Enter $0,0,0$, To Go To Next Voice."

The notes available to you are: C , C\#(Db), D, D\#(Eb), E, F, F\#(Gb), G, $\mathrm{G} \#(\mathrm{Ab}), \mathrm{A}, \mathrm{A} \#(\mathrm{Bb})$ and B .

Note that \# signifies sharp and b denotes a flat. To enter a sharp, press Shift 3. To enter a flat, press Shift 6 (\&). The \& symbol is used to distinguish a flat from a lowercase $b$.

Figure 1. Auld Lang Syne sheet music.

You are now ready to input notes from your sheet music or from the example Auld Lang Syne (Figure 1). As indicated earlier, music is very complex. Although this program makes entering this data quite straightforward, you must take great care in entering each note, octave and duration, and you must enter them in just that particular formatnote, octave, duration.

Specifically, the format must be a note (which may be a letter by itself or a letter and a sharp or flat) followed by a comma, plus an octave number followed by a comma and, finally, a duration number. For example: C\#,5,4. (Refer to Figures 2 and 3.)

A comma must be used to separate off each entry, or it will be rejected and you'll be prompted with a Redo From Start error message. You may then reinput the line where the error occurred.

Generally, it's good practice (initially) to enter just one complete line of sheet music at a time (as in my example). This is typically four measures. If you've completed the first voice and wish to move on to the next voice, enter $0,0,0$.

Entering another voice involves reentering the same number of mea-
sures, even though the notes, octaves and durations are different. You will notice that, as each note, octave and duration is entered, a measure number will appear to the right. This is to assist you if a note change has to be made later.
The most critical point to remember is that even if you make a mistake, you must still complete the same measure total for all the voices you are entering before you can correct a mistake.

When you make a mistake, simply jot down the measure number where the mistake occurred. If you don't complete the proper measure count for all voices, the entire series must be redone from the last " $\mathrm{A}=$ Add Notes To Song" selection.
It's a good practice to write down the final measure number before you go on to the next voice. When you complete the next voice, you can then compare and be sure that the measure numbers are the same. There fore, until you become more familiar with this procedure, enter only a maximum of four measures at a time for all the desired voices.

Now use the A option to continue your input. This way, if you make an error, you will only have to enter, at

## Fleet System 2. Word processing that spells V-A-L-U-E.

## Complete word processing with built-in 90,000 word spell checking-Only $\mathbf{\$ 6 9 . 9 5}$

Up till now, you'd have to spend a minimum of about $\$ 70$ to get a good word processor for your Commodore $64^{\mathrm{TM}} / 128^{\mathrm{TM}}$ And if you added a small, separate spell checking program, you'd be out well over $\$ 100$ !

Now there's Fleet System 2! It's two powerful programs in one, and it's perfect for book reports, term papers or full office use.

Fleet System 2 combines the EASIEST and most POWERFUL word processor available with a lightning-fast 90,000 word spelling dictionary - all in one refreshingly EASY TO USE integrated system. Finally, spell checking is now available at your fingertips.

You can even add over 10,000 "custom" words to the built-in 90,000 word dictionary. And at a suggested retail price of $\$ 79.95$, Fleet System 2 really spells V-A-L-U-E, and 90,000 other words too! Fleet System 2 helps people of all ages to learn to spell correctly and write better too. It's the ONLY full featured word processor that provides you with helpful writing and VOCABULARY FEEDBACK such as: the total number of words in your document, the number of times each word appears, and total number of "unique" words, just to name a few.
Fleet System 2 has every important feature that will help you make child's play

Figure 2. Songfest Reference Guide.

## NOTE AND OCTAUE IDENTIFICATION CHART

This is a sample staff with all the notes labeled. The letter indicates the note name and the number indicates the octave. These are the values you will be using during the Add or Input mode in Songfest. Simply find the placement of the note from your sheet music by using this guide.

Figure 3. Songfest Reference Guide.
most, four measures of the song. When the selected number of voices have been properly entered, play the song to make sure you find it pleasing. If you are satisfied, press the A option again and continue inputting your song.

If you feel a note is incorrect, use the E option. You will be asked which voice contains the error ( 0,1 or 2 ) and for the measure number just before the note to be changed.

Up until the time you press the return key, you may edit as always by pressing the delete key and retyping the data. Once you press the return key, your data is saved within Song. fest. Changes at this point require the use of the E option. Duration errors are basically fatal, because they offset the entire song's timing and measure count, therefore requiring reentry of the entire song.

If you discover an error in a note or octave, mark down the measure number that's beside the incorrect entry. Continue entering until you have entered all notes up to the previous voice's measure number. (Remember, all voices must have the same number of measures.) If you've decided to enter all three voices, all three must be at the same measure number before you will have a correct song.

This will return you to the main menu, where you can select the E option. This will ask you which voice you'd like to change. You'll then be asked for the measure number of the incorrect note. After Songfest finds the note, you'll be asked to reenter the note and the octave.

M—modify waveform. After working with Songfest for a while, you may wish to do some experimentation of your own. This option gives you the capability of playing back your song in just about any combination of waveform and attack/decay and sustain/release parameters possible on your 64. The M option will first tell you what the present settings are and then ask you to input your new selections. The A/D and S/R parameters are explained fully in the sound section of your user's manual.

The suggested waveforms are: a triangle, which is 17 ; a sawtooth, which is 33 ; and a pulse, which is 65 . You may also select different settings for the $A / D$ and $S / R$ parameters.

These parameters all affect the types of sounds the SID chip produces. By careful experimentation and selection, you'll be able to re-

## 官它官方官回 <br>

## CHIMERA

Investigations have traced the source of erratic radio signals to a glant alien vessel，orbing the Earth high in the exosphere．That the crafi is hostile，there is no doubt： somebody will have to go aboard and find out how to eliminate the threat．

## B00TY

Well shiver me timbers and splice the mainbrace and pass the grog．me hearties．Here be the greatest pirate adienture of them all，aboard that． scourge of the Seven Seas－the dreaded Black Galleon．Feast yer eyes on the BOOTY／ful treasure ： stored in 20 holds．There be pirates， parrots and fun galore．If you don＇t like it，matey，we II hang you by the highest yard－arm II

## CYLU

Greetings Cylu，Warrior Kng，to the land ol Evol．Our people need a now leader to make us great again． He must be agile，and show that he is wise and strong，and so we have devised a test．Il you pass，you will prove that you are worthy If you tail．

## The Warning

Thy path is long so tread with care Beware the will and pass his bar Danger threatens ail around So take ye from this hidden mound Io tree thee from this sunken gate By way of cave or meet thy fate An amulet to seek thy will
Twas spit by quad and hidden still Pass the keeper wrought with hate Togain an entrance to the gate The preces lost must thee amass Forifnocharm then none shallpass

Figure 4. Auld Lang Syne input data.
produce various musical instruments. The possibilities are virtually endless for the types of sounds you can create, including those unique to the SID chip itself.

S-sound change during playback. This menu selection lets you experiment with various sounds without really understanding anything about waveforms or $A / D$ and $S / R$ settings, which you may not yet have had time to learn. Once you've loaded a song, either from the disk or the keyboard, press S. Pressing f1, f3, f5 or f7 will play the song with different preselected voice parameters. If, after experimenting on your own, you like the sound you've created, you may change these parameters yourself.

They are located in lines $920-970$ of the program.

K-keyboard synthesizer. The keyboard synthesizer is another great feature of Songfest. Basically, what the K selection yields is a screen of help text, which gives you various alternatives to selecting, tuning and playing your new musical instrument, the Commodore 64.

The $\mathrm{f} 1, \mathrm{f} 3, \mathrm{f} 5$ and f 7 function keys select the octave in which you wish your instrument to play. ( f 1 is the highest octave; f7, the lowest.)

The f2, f4 and f6 keys select the waveform or instrument type you wish your Commodore to be. You'll find f 2 to be a smooth, mellow sound, while f6 tends to be a bit twangy.

Pressing $f 8$ allows any note to continue to play until you press the next note. This is called maintaining the note. Some instruments, such as the accordian and many organs, are capable of maintaining notes in this fashion.

Pressing the space bar yields another interesting variation-polyphonic sound, which is much like a harpsichord. To deactivate this, press the space bar again.

Also displayed on the screen is a small chart, the index, which turns the 64 into the keyboard of a musical instrument. Each available note is listed. Beneath each one is displayed the corresponding letter that you must type to produce this sound. To return to Songfest, you may press Z at any time.
$Q-q u i t$ and exit program. This selection, of course, returns you to Commodore Basic. If you accidentally press $Q$ while inputting or playing your song, you can recover by immediately entering GOTO 40 in the Direct mode.

## Songfest Sample Application

The following section will assume that you have an understanding of the basics of music.

Relax now, and I'll take you through a brief example of entering music into Songfest.

First, be prepared to reference Fig. ures 2 and 3, the Songfest Reference Guide. Second, take a look at the sample song on the sheet music provided in Figure 1. Third, reference Figure 4, which is a list of all the note entries for the song, "Auld Lang Syne." This is the entire song in all three voices. Wait until you hear it! Let's begin.

Type I to enter the Input mode. You will then see another display asking you how many voices you'd like to enter. For this example, enter 3. You'll then be presented with another selection choice. What parameters or waveform type would you like for Voice 0? For this example, use the following parameters for Voices 0,1 and 2 as indicated below:

| Voice $0 \mathrm{~W} / \mathrm{F}=$ | 17 |
| :--- | ---: |
| Voice $0 \mathrm{~A} / \mathrm{D}=$ | 9 |
| Voice $0 \mathrm{~S} / \mathrm{R}=$ | 240 |
| Voice 1 W/F $=$ | 33 |
| Voice 1 A/D $=$ | 10 |
| Voice 1 $\mathrm{S} / \mathrm{R}=$ | 120 |
| Voice 2 W/F | $=33$ |
| Voice 2 A/D | $=10$ |
| Voice 2 S/R | $=85$ |

Of course, you may change these parameters during the playback if you're not happy with them.

# f-15 STRIKE EAGLE 

## For Fighter Pilots-Not Sightseers

MAJOR BILL OVER
3000 FLYING HOUPS

F-15 STRIKE EAGLE is the most realistic, accurate and fun combat flying simulation available. Others have tried to copy it. But none of them have ever strapped on a fighter to experience the thrill and excitement of real combat fighter missions like our Major Bille has. Compare F-15 STRIKE EAGLE versus our famous competitors, better known for their fancy hangar graphics. If you want a slow sightseeing hangar queen, buy theirs! If you want a product that has had over 50 outstanding reviews, thrilled over two hundred thousand satisfied computer fighter pilots, and gives you real fighter pilot action, then you want F-15 STRIKE EAGLE!

## COMPARE-

"C-EA COVPAPISON

F-15 STRIKE EAGLE is for Commodore 64/128, Atari 800/XE/XL series, Apple II+ family. IBM PC and PC JR computers for a suggested retail price of only $\$ 34.95$. Call or write for more information or Money Order, MC/Visa orders. Add $\$ 2.50$ for shipping and handling.

Registered trademarks of Commodore Business Machines, Inc., Alari. Inc., Apple Computer Inc. and International Business Machines, Inc., respectively.

After selecting these parameters, which basically select the "instruments" that will play the song you're about to enter, you will be presented with the note input questions. From here, you just need to enter the data listed in Figure 4.

But why don't you look at this whole process a little closer? If you look at the sheet music, you'll notice a time signature of 4/4. This means that you have to treat each measure as if it had 16 beats. For a $4 / 4$ time signature, all (and I do mean all) measures must have a total of 16 beats. On the other hand, a $3 / 4$ time signature would have 12 beats per measure.

The funny-looking sign on the left of the music is called a G clef. To the right of that is a flat designation (b) on the staff line B (remember, Every Good Boy Does Fine). This tells you that every time you encounter the note B, you must enter it flat (shift 6 ). Another interesting way to input B flat is to enter A sharp (A\#).

You may always use this conversion if it's easier for you to remember. To visualize this a little better, you might picture a flat as being a half step below a given note and a sharp as being a half step above a given note. Therefore, an A sharp is equal to a B flat. Similarly, an F\# is equal to a G flat. All right, let's get back to the sheet music.

Knowing that each measure has to have 16 beats because of the time signature $4 / 4$, let's take a look at the first measure in "Auld Lang Syne." There's only one note there, and it's a quarter note, which, according to your reference chart, is only supposed to get four beats.

What to do now? Well, this happens sometimes, but, remember, all measures with this $4 / 4$ time signature must have 16 beats, or the song is not going to sound right. Here you can utilize a "rest" to fill the unused beats in the measure. Enter S,4,12 as your first en-
try. Then enter C,4,4 for the quarter note. That gives you a total of 16 beats, and you're in business.

You can enter as many notes as you'd like (up to 90 measures) in each voice, but I strongly suggest that, until you are thoroughly familiar with the program, you enter only four measures at a time. Enter the four measures, then enter $0,0,0$ to move on to the next voice, and repeat this procedure until all three voices are complete. Play the song to make sure it's all right. Now use the A option to continue inputting. After you've finished, sit back and listen to what you have accomplished. It sounds great, doesn't it?

Now that you're an accomplished musician, you're ready to tackle other songs. If you feel you're ready for the big step, enter an entire song in one voice before going on to the next voice, and soon the entire song has been entered.

## Hints for Advanced Users

To suit your own taste, you may change the number of beats that each note normally gets, but only if you change all others accordingly. For example, if you purchase some sheet music, enter it into Songfest and find that the tempo is too slow or too fast, you can change the speed by altering the note-duration value.
In a song that is playing too quickly, double the duration value of each note. Give a whole note 32 beats, a half note 16 beats, a quarter note eight beats, and so on.

In a song that's being played too slowly, cut the duration in half. Give a whole note eight beats, a half note four beats, and so on. Remember, make sure all notes are treated proportionately. Don't be afraid to experiment. As long as each voice has the same number of measures, there will be no difficulty.
Here's another hint that may clar-
ify some points on $A / D$ and $S / R$ set tings. As an advanced user, you may understand that the actual settings of $\mathrm{A} / \mathrm{D}$ and $\mathrm{S} / \mathrm{R}$ are actually controlled by two bytes in the SID chip. The upper nibble of the $A / D$ byte is $A$, and the lower nibble is D. The same holds true for the $\mathrm{S} / \mathrm{R}$ byte- S being the high nibble and R being the low nibble.

What this means is that a little calculation is necessary to obtain meaningful values of $A / D$ and $S / R$. First, select the desired value of decay (D) and release (R) between 0 and 15 . Remember, a lower number means a quicker decay or release rate. Now pick a value for attack (A) and sustain (S) from 0 to 15 .

The lower the attack number, the faster the note rises to its initial peak. The sustain value determines the amplitude (volume) during the sustain portion of the note.

Now, to calculate the actual value of $A / D$ from 0 to 255 , take the value (from 0 to 15) you have selected for the attack and multiply it by 16 . Then, add this value to the value you have selected for the decay (from 0 to 15). This will give you the correct number to enter to select A/D. The same procedure applies for sustain and release.

You are now well on your way to becoming a great computer musician. Good luck.

Note: In future issues we will publish lists of input notes for various songs that you may use with Songfest. We welcome contributions from our readers. If you have entered any songs in the public domain that you would like to share with us, send a disk and a printout of the notes to: Songfest, RUN Magazine, Technical Dept., 80 Pine St., Peterborough, NH 03458.

## Flight Simulator II Scenery Disks

## The Challenge of Accomplished Flight

With a realism comparable to (and in some ways even surpassing) $\$ 100,000$ aircraft flight simulators, Flight Simulator II includes full flight instrumentation and avionics, and provides a full-color out-thewindow view. Instruments are arranged in the format standard to modern aircraft. All the radios needed fon IFR flight are included. Front, rear, left, right, and diagonal views let you look in any direction. Program features are clearly documented ina 96-page Pilot's Operating Handbook.

For training in proper flight techniques, Flight Simulator II includes another 96 -page instruction manual, compiled by two professional flight instructors with over 8,000 hours flight time and 12,000 hours of aviation teaching experience. You'll learn correct FAArecommended flight procedures, from basic aircraft control through instrument approaches. To reward your accomplishments, the manual even includes a section on aerobatic maneuvers.

## The Realism and Beauty of Flight

Go sight-seeing over detailed, realistic United States scenery. High-speed graphic drivers provide an animated out-the-window view in either day, dusk, or night flying modes.

Flight Simulator II features over 80 airports in four different scenery areas: New York. Chicago, Seattle, and Los Angeles. Six additional Scenery Disks covering the entire Western half of the United States are now available in IBM and C64/I28 disk formats.

Apple and Atari versions will be released soon. Each disk covers a geographical region of the country in detail, and is very reasonably priced.

## The Pure Fun of "World War I Ace"

When you think you're ready, you can test your flying skills with the "World War I Ace" aerial battle game. This game sends you on a bombing run over heavily-defended enemy territory. Six enemy fighters will attempt to engage you in combat as soon as war is declared. Your aircraft can carry five bombs, and your machine guns are loaded with 100 rounds of ammunition.

See Your Dealer. Flight Simulator II is available on disk for the Apple II. Atari XL/XE, and Commodore 64/128 computers for $\$ 49.95$. Scenery Disks for the C64 and IBM PC (jet or Microsoft Flight Simulator) are $\$ 19.95$ each. A complete Western U.S. Scenery six-disk set is also available for $\$ 99.95$. ## SPECIALS

Disk notcher
Double your disk capacity with this ittie tool.

## FAST RAM

- Powerful all machine language program. - Takes up only 4 K of memory. - Adds 10 new commands plus and advanced DOS wedge Store programs or sequential in Ram for almost instant access. This gives you the advantage of having several programs in memory at the same time. Imagine writing a game and having a sprite editor program in memory at the same time!

ONLY

## PHOTOCOPY

A utility to convert several different graphic pictures over to the NEWSROOM format. This program will convert the following.
Hi-res Doodle, screen magic, flexidraw, and graphics basic. Also converts 8 K bit mapped hi-res file such as Screen Magic, and Flexidraw.
Improve your NEWSROOM library.
${ }^{\$ 1995}$

## DIR+

A DISK LIBRARY CATALOGING PROGRAM
Having problems finding that lost disk? Here's a program that allows you to alphabetize and print out your program names in a versatile format. A scrolling arrow allows you to edit out meaningless names and keep what you want. Know what you got and where its at!

- 60 to 600 titles ( 1 to 5 COLUMNS) can be printed per page by using optional condensed printing.
- Print disk labels with your disk names and ID's.
- Can support up to 1100 program titles and can
alphabetize in less than 15 seconds!
ONLY $\$ 19^{95}$
- Save the master list to disk for use with a word processor or a data base.

## TOOLBOX 64 AND NEW TOOLBOX 128

Side i contains over 100 routines, some of them are for protection, smooth scrolling, modem routines and sound and color. Also a bootmaker, paddle and joystick test; read terminal, and auto dial and auto answer. Documented routines allow you to use them to build your own programs or use alone. This disk has a lot of tricks that are used in commercial software.
Side 2 contains several of the same routines for the 128 system but also a T\&S editor for going out to track 66, along with a screen dump for the 80 colum mode and lots, lots more.

## Side 1 C-64 Side $2128 \quad$ All for $\$ 1995$

## 64-128 CROSS REFERENCE BOOK

This is the first book available of its kind. Complete cross-references used to covert 64 programs over to the 128 computer. Book is formated on the left side with the location and label name, and then on the right with the equilvent 128 location. The entire range of memory is covered starting at 0-Page going thru BASIC and then thru the Operating System. A must for the serious 128 user.

## 64 BBS

Full performance boards with lots of extra's not found on others. Both boards have message rooms that can be setup for a variety of different uses. Each room can have it's own access level assigned for maximum control. $\quad$ - Remote access for system operator

- 7 read and write rooms with up to 8 secur ity levels
- Public message base and sysop's mail
box
- Secret highest level for complete access of all functions. Boards activity can be sent to printer - 300/1200 baud selectable
- Up and down file transters with a choice of access levels.
- New punter and X-modem protocol supported.
- Auto cyeling of E-mail.

## 128 BBS

${ }^{5} 39{ }^{95}$
This is the first complete 128 bulletin board of it's kind. All the features of the 64 board and more. The board takes advantage of the extra memory by providing a complete seperate sub-board. User can have both boards available at the same time. Imagine running an open board for everyone a secret closed board for the more serious users. Look at these features.

- Print out boards activity to include what files accessed and by who.
- Faster performance and more storage using the 1571 drives.
- Supports the use of over 500 users!
- Both boards will support and work on any type of disk drive including the big 1 meg. SFD's.
s3995

## GRAPHIC LABEL MAKER

Give your labels the protessional touch. With Hi Rez Graphics make your own design or use one our 60 premade labels with easy to use on screen editor. You can insert up to three lines of text then choose the picture you want to put on the left hand side of the label. Then you can print out as many labels as you want. This has got to be the neatest label program out there and it's only $\$ 2,95$

*Now works with Print Shoo

- Also available - the x-rated Graphic package for the 64 and
your print shop There's 60 Hi Rex pictures
${ }^{\text {s }} 4^{95}$

## 1541 M.A.S.H.

Now you can service your own 1541 disk drive using 1541 M A S H Save big bucks on repair bilis. Rate the performance of your drive. Test and adjust RPM's Test and adjust head align ment. Step by step instructions that anyone can follow. Pays for itselt the first time you use it to adjust a misbehaving drive No knowledge of electronics is necessary. All you needs is a screwdriver and 20 minutes.

now only ${ }^{5} 9^{95}$

## 128 80-COLUMN ADAPTER

An adapter that plugs into your RGB output that gives you 80 -columns of monochrome text in the 128 mode.
$\$ 9^{95}$

## THE MECHANIC

A collection of Programmers utilities for the Commodore-64 enthusiasts. Included are Programs which will allow you to make your 64 do things it did not do before. Four major utilities are listed below but contains more!

- FULL FEATURED TRACK AND SECTOR EDITOR-Display can be changed to readout in ASCII. HEX or Decimal, also a directory can be listed within the
Program!
- FILE MAINTAINER - A menu driven section featuring a scrolling file selector to copy multible files without typing all the names in. Also included is a file renamer, scratcher and file locker and unlocker.
- ML MONITOR - A complete monitor with easy to use commands along with some extra features not found on some, has the ability to do a directory within the monitor and send drive commands.
- POWER SORT - A unique sorting program that allows you to pull in the directory, sort it alphabetically or by size and then store it back on the disk!

$$

## WANTED: PROGRAM SUBMISSIONS

Megasoft is currently seeking quality program submissions for marketing on a national scale. We pay good royalties and can work several options. It you feel that you have something of interest, call (206) 687-7176 for more information. Unique utilities and hardware devices a plus.

## AUTO LOAD

Tired of typing load commands over and over? Here's a cartridge based program that will solve all your loading needs. Holding down different keys automatically loads and runs programs along with a one button loading of the directory!

- Get a menu selection of the disk by just turning the power on.
- ANY commands normally typed can be put into an automatic Power up file.
-Works with multible disk drives!
- Great for Programmers who load several utilities in a row.
- Comes with built in system reset switch
- Easy for kids who can't type yet.

## D-CODER

- Translates any machine language program into easy-to-ready English descriptions with complete explanations of each command.
- Makes complete notations of all important memory locations accessed by the program (SID, VIC, MOS, KERNAL, etc.)
- Gives you three ways of accessing programs: 1. Will read and list programs from DISK

2. Will read and list programs from MEMORY
3. Direct user input (from magazines, etc.)

- Can be used to locate and examine any machine language program's protection routines!
- Can be used to easily break apart machine language programs for study and examination!
- Printer option for complete hard copy listings!

You no longer need to be an EGGHEAD to read Machine Language.

## N-CODER

## THE PERFECT COMPANION PROGRAM TO D-CODER!

Allows you to easily make changes in machine language programs . . . right on the disk!

- Rewrite ability allows code to be altered and then rewritten directly to the disk!
- Features sector-by-sector scrolling assembly language display of machine language programs!
- Notation of ASCII text equivalents for easy spotting of embedded text strings!
- Handy reference display of all assembly language commands and their ML numerical equivalents!
- Byte splitter for easy splitting of decimal
${ }^{\text {s } 1995}$

## Top Secret Stuff I and Top Secret Stuff II

Are both collections of 20 programs per diskette (that works out to about $\$ 1.00$ per program!) that help you explore and enhance your Commodore 64 andior 128 and 1541 disk drive. Now you can uniock many secrets formerly known only to top machine language programmers by using these sophisticated "tools. "If you have ever been curious about the inner workings of your computer system, now is your chance to dig in and find answers with the help of these programs. These collections of programs have gotten rave reviews from actual users. and we are sure that you. too, will be pleased.

These are just some of programs included.

TOP SECRET STUFF I
The Dock (view/repair disk contents)
Sync Checker (diskette)
Disk Manipulation System
Diskette Matcher (compare sectors)
1/2 Track Reader

# RUN Script 64 

This month, we will give RUN Script 64 new muscles by adding programs that let you access your printer's codes and customize this word processor.

## By ROBERT ROCKEFELLER

This month I will explain how to customize RUN Script 64 to accommodate your own system setup and personal preferences. As I said last month, if you have a Commodorecompatible printer, it's not necessary for you to customize RUN Script 64. For those with other types of printers, I will first explain about RUN Script 64 's printer-macro facility, and then the customizing procedure.

## Defining Printer Macros

Many C-64 owners use non-Commodore printers such as the Okimate 10 or Epson MX-80. Such printers often have many desirable features, like italic character sets, the ability to do underlining, and so on. The printer-macro feature of RUN Script 64 was designed to allow you to customize your copy of this word processor so you can take full advantage of whatever capabilities your printer may possess.
You may select any upper- or lowercase alphabetic character to be a macro character. You then create a table of printer macros with an easy-to-use Basic program called Define Macros (Listing 1). Each macro character represents a string of user-defined characters. When a macro character is
encountered during printing, this string, rather than the macro character itself, will be sent to the output device.
For example, let's say you own a printer that requires the sequence ESC X (decimal values 27,88 ) to start printing double-width characters. With Define Macros, you could select a character-D, for instance-to represent this two character string. Then, when D is encountered during printing, the decimal sequence 27,88 would be sent to the printer, resulting in double-width characters. You could then define another character, perhaps d , to represent the correct sequence to stop printing doublewidth characters.
This macro feature is most useful for printing titles and subheadings. To create a double-width heading, first place the cursor in front of the heading. Next, press the f3 key. A *mac* message will appear on the status line. Press the upper or lowercase alphabetic character you've chosen to activate the double-width capability (in my example, D). Finally, move the cursor to the end of the heading, press f3 again, and press the key you've chosen to deactivate the dou-ble-width feature (d, in my example). That's all there is to it! If you press
any non-alphabetic character, the operation will be aborted.
Your table can be composed of 52 different macro definitions, each of which can be from one to 20 characters long. Exactly 500 bytes have been allocated for the complete macro table.

## Customizing Procedure

You can create your own personalized copy of RUN Script, with a custom-character set, default screen colors of your choice, printer parameters you design, and the macro table described above.
Step 1. Type in Listing 2, the RUN Script Params program, and save it to disk. Load the RUN Script 64 Boot program you typed in last month. If you've decided to make use of the printer macro feature, change line 60 to:

## 60 MAC $\$=$ "RUNSCRIPT MACROS"

If you're going to use a custom character set (see Step 4), make the variable CHAR\$ in line 100 equal the name of your character set. For example, if you've saved a character set under the filename "Big Letters," then change line 100 to:
100 CHARS $=$ "BIG LETTERS"

## RUN It Right

Photo 1. Screen colors you can select from RUN Script Params program.

Step 2. Step two sets the default parameters of the RUN Script 64 machine language program. First, execute this line of Basic:
POKE 43,1: POKE 44,3*16: POKE 3*4096,0: NEW

This raises the start-of-Basic memory to allow room for the RUN Script 64 machine language program. Now, load RUN Script 64 with:

## LOAD"0:RUNSCRIPT",8,1

After loading, execute:

## NEW

Now, load the previously saved RUN Script Params program with a normal Basic load, then run it. This program will allow you to select certain RUN Script parameters. After you have implemented your param. eters, the machine language program will then be saved under the name "RUNSCRIPT".

Now, you must select the screen colors that RUN Script 64 will use when first starting up.

You will also be allowed to change the variable that sets the highest address used by RUN Script 64. You may set this to a lower value if you wish to have a machine language program (such as a fast-load program) stored in high memory.

Next, you will be prompted to select the default save-device number, which is used for all saving and loading. Then you will be allowed to specify the type of ASCII that RUN Script will use when powering up. If you
 Mov Not Reprif Withoupermision
intend to use true ASCII, answer "true" at the prompt. You can then specify whether the linefeed character (decimal value 10) will be sent after each carriage return character (decimal value 13). Some non-Commodore printers require linefeeds to move to the next line.

The final parameter, secondary address, is very important to users of non-Commodore printers. Those who own Commodore printers and Com-modore-compatible interfaces can leave the secondary address at 7 to specify upper- and lowercase printing.
If your printer requires a parallel interface, check your user's manual for the secondary address that passes characters unchanged to the printer. This is the secondary address that should be used to send macro strings to the printer.
You can also lock your interface into a mode in which characters received by the interface are passed to the printer unchanged. You must do this before starting RUN Script 64, and RUN Script 64 must be set to use true ASCII if this method is used. Also, once your interface is locked, you needn't specify a secondary address. Check your printer interface manual to see if it has this capability.

An advantage to using RUN Script 64 over other word processors is that you can print Commodore graphics characters if you have a graphics interface along with a non-Commodore printer.

After you've set the parameters,
the RUN Script machine language program will be saved.

Step 3. If, for some reason, you have decided not to make use of the printer-macro feature, skip this step and go to the next. Otherwise, type in the Define Macros program and save it.

Before running Define Macros, make a list of the alphabetic characters you want to use to represent the various functions your printer can handle. These will be your macro characters. Beside each macro character, write the decimal values of the character sequence that must be sent to your printer to implement the function each individual macro character represents. Then run the Define Macros program.

You will first be prompted to select a macro character. Enter any upperor lowercase character from A to Z . (If you make a mistake and wish to cancel a macro definition, use the asterisk.) You will then be asked how many characters will be represented by the macro character you've entered. Count them from your list and enter the total.

Next, enter the decimal value of each character in the string, starting with the first and continuing until all have been entered. Once you've done this, you will have defined one macro. The prompt, "Finished all definitions (Y/N)?" will then be displayed. If you have more macro definitions to enter, type N and press return.

After you've entered your list of macro definitions, press Y at the prompt. Within seconds, the program will create the table of macro definitions. The program will then prompt you to save the macro table to disk and provide the proper device number.
Step 4. Finally, you must save a character set on disk for RUN Script 64. Unless you have a custom-character set, load RUN Script 64's character set program (from last month) and run it. It will automatically create a copy of the C-64 upper- and lowercase character set on disk.
That's all there is to it. You should now have a customized version of RUN Script 64. When you wish to use this word processor, just load the Boot program and run it.

# ancer (hay <br> <br> mix - m <br> <br> mix - m <br> <br> COLOSSUS CHIESS IV <br> <br> COLOSSUS CHIESS IV <br> <br> CLOSES THE DOOR ON ALL THE OTHERS 

 <br> <br> CLOSES THE DOOR ON ALL THE OTHERS}

COLOSSUS is the most complete chess program available for the CBMтм 64/128 and APPLEтm2 Series, written using the very latest techniques by a computer chess programmer of eight years experience. It has the widest range of true features available, including some never before implemented on any home computer chess program.
COLOSSUS has a perfect understanding of all the rules of chess, including underpromotions, the fitty move rule and all draws by repetition. It can handle standard mates; including the very difificult King, Bishop and Knight versus King.

Use your Commodore 64 to improve your performance at the track! These fine programs for Thoroughbreds, Harness Horses and Greyhounds combine the power of your computer with the savvy of a veteran handicapper. Spend a few minutes entering data, and The Handicapper will rank the horses or dogs in each race. All the information you need is readily available from the Thoroughbred Racing Form, harness or greyhound track program. We even provide a diagram that shows you where to find it!

Horse racing factors include speed, class, past performance, post position, stretch gain, beaten favorite, jockey or driver's record, weight (for thoroughbreds) and parked-out signs (for trotters). Greyhound factors include speed, past performance, class, favorite box, kennel record, breaking tendencies, beaten favorite.

Instructions and wagering guide included. Thoroughbred, Harness or Greyhound Handicapper, only \$34.95 each on tape or disk. Any two, just $\$ 54.95$. All three only $\$ 74.95$.

# 128 and C. $64^{\circ}$ ( FTWARE 

Our BASIC Compilers are the complete compiler and development packages. Speed up your programs from 5 x to 35 x .

Our BASIC Compilers give you many options: flexible memory management; choice of compiling to machine code, compact p-code or a mixture of both. Also on the '128, 40 or 80 column monitor output and FAST-mode operation.

The '128 Compiler's extensive 80-page programmer's guide covers compiler directives and options, two levels of optimization, memory usage, input/output handling, 80 column hi-res graphics, faster, higher precision math functions, speed and space saving tips, more. A great package that no software library should be without.

BASIC 128 Compiler $\$ 59.95$
BASIC 64 Compiler $\$ 39.95$

For school or software development, select SUPER C. Learn to use one of today's most popular languages on your Commodore 128. Powerful screen editor, compiler, linker-link up to seven modules, $1 / 0$ library-includes printf and fprintf. Compile your C programs into fast machine language. C-128 \$79.95
C. 64 \$79.95

For the professional who wants to easily create high quality charts and graphs without programming. You can immediately change the scaling, labeling, axis, barfilling, etc. to suit your needs. Accepts data from CalcResult and MultiPlan. C-128 version has $3 X$ the resolution of the ' 64 version. Outputs to most printers. C-128 $\$ 39.95$

C-64 \$39.95

## PowerPlan

One of the most powerful spreadsheets with integrated graphics for your Commodore computer. Includes menu or keyword selections, online help screens, field protection, windowing, trig functions and more. Power-Graph, the graphics package, is included to create integrated graphs \& charts. C-64 \$39.95

CADPAK is a remarkably easy to use drawing package for accurate graphic designs.

Using CADPAKs new dimensioning features you can create exact scaled output to all major dot-matrix printers.

This enhanced version of CADPAK allows you to input via the keyboard or a high quality lightpen. Two graphic screens permit you to COPY from one screen to another. DRAW, LINE, BOX, CIRCLE, ARC, ELLIPSE are but a few of the many selections to choose from. FILL objects with preselected PATTERNS; add TEXT; SAVE and RECALL designs to/from disk. You can define your own library of intricate symbols/objects with the easy-to-use OBJECT MANAGEMENT SYSTEM-it will store up to 104 separate objects.

C-128 \$59.95
C-64 \$39.95

Not just a compiler, but a complete system for developing applications in Pascal. Extensive editor with search, replace, auto, renumber, etc. Standard J \& W compiler that generates fast machine code. If you want to learn Pascal or to develop software using the best tools available-SUPER Pascal is your first choice.

C-128 \$59.95
C-64 \$59.95

## OTHER TITLES AVAILABLE:

## Technical Analysis System

A sophisticated charting and technical analysis system for serious investors. By charting and analyzing the past history of a stock, TAS can help pinpoint trends \& patterns and predict a stock's future. Enter data from the keyboard or from online financial services.

C-64 \$59.95

## Personal Portfolio Manager

Complete portfolio management system for the individual or professional investor. Easily manage your portfolios, obtain up-to-the minute quotes and news, and perform selected analysis. Enter quotes manually or automatically through Warner Computer Systems.

C-64 \$39.95

## Xper

XPER is the first "expert system" for the C-128 and C-64. While ordinary data base systems are good for reproducing facts, XPER can derive knowledge from a mountain of facts and help you make expert decisions. Large capacity. Complete with editing and reporting.

C-64 \$59.95

# Shopper's Guide To CP/M Software 

For those of you just starting to build your CP/M public domain library, here are four utilities you should add to your shopping list. They help you save disk space and take better advantage of your on-line time.

By CHERYL PETERSON

With thousands of CP/M public domain programs available, it's difficult to know which ones to acquire first. This article will describe some of the more important programs, explaining how they work and why they've become so popular. Most are available through public domain software vendors or from local electronic bulletin boards. (See "CP/M Treasure Trove," in RUN's January 1986 issue.)

## Squeeze and Unsqueeze

Two of the first programs you should look for are SQ.COM and USQ.COM. These programs have undergone several improvements, and each version gets a new version number tacked on. (The programs may have different names, such as SQEEZ, SQEZR or UNSQ.) In addition, some electronic bulletin boards put these programs into a library file. (More on library files later.)

SQ (called Squeeze) is a program that compresses data to create a much smaller file. Typically, this program reduces a file to about two-thirds of its original size. Phone transmission times for squeezed files are much less than for unsqueezed versions, so BBS users can save time (and long-distance phone charges) by learning to use SQ. CP/M bulletin boards use $S Q$ to reduce the amount of disk space that programsucconponeudhegpical CP/M users Moy Not Reprint Wilhoul Permission
can use it to minimize disk space for archival purposes.

By using SQ to compress datafiles that aren't being actively used, you can also save on the number of disks you buy. Because these files can't be modified without first unsqueezing them (using USQ), it isn't a good idea to squeeze files you use on a daily or weekly basis. But for business records or letters that you must keep on file for a specified period, compression can save a significant amount of disk space.
SQ is also good for use with backup files. Since they rarely have to be used, unsqueezing the few files you may need in case of a "crash" is a small inconvenience when you consider the disk space saved.

Because most electronic bulletin boards use SQ to save the limited disk space on their drives, you will notice that many of the programs have a " Q " as the next to the last letter in their name. This means that the program needs to be unsqueezed before you can run it.

## Using SQ and USQ

Both of the programs are very easy to use. Despite this, I highly recommend getting a copy of the documentation and a complete descrip. tion of how the programs work. (You should download.DOC files from the
board.) Batch processing and other more involved uses of the programs are described there.

Since you'll probably be using it first, USQ gets first treatment. The more recent versions have a partial unsqueeze feature built in. This al lows you to view the beginning lines of a file to confirm its identity. Type:
USQ-Z \{filename1\}
Z is the number of lines to be unsqueezed and can be up to 65,535 . Filenamel is the name of the file to be unsqueezed.

If the file to be unsqueezed isn't on the default drive, you must use a drive specifier. If the -Z isn't used, then the program unsqueezes the entire file and writes it to disk for you. Be sure there is enough room for the new file; remember, the newly created file may be twice the size of the original.

SQ works much the same way as USQ. Type:

## SQ \{filename\}

Multiple filenames may be used if you have several files to squeeze. Be sure there is enough room on the disk for the squeezed version.

Since SQ and USQ occupy about 38 K of disk space, place them in the A drive and reserve the B drive for the programs with which you'll be working. This leaves more room on

Directory listings.
A file containing recent additions to a BBS
XXX.UPD Usually an updating listing of some sort.

Other files may be identified as REF (reference), FIX (bug or problem fix), MOD (modification), REV (revision), TBL (table), INF (information) or TIP (tip or hint). Months of the year may be identified by a three-letter extender.

Table 1. $C P / M$ filetypes and descriptions.
the destination disk. In this case, use the A drive as the default and type the B-drive identifier before the names of the programs you're processing. The 1541 makes an excellent $B$ drive. (Single disk drive owners will use E to designate the second drive, known as the "virtual" drive.)

SQ and USQ can also be used in Interactive mode. Use the same procedure as when using PIP. After the asterisk prompt, just type the name of the file you want processed. Entering a blank line and pressing the return key exits the program.

Another program that works in conjunction with SQ is the TYPESQ program. With it, you can type out text files that have been squeezed without unsqueezing them first. Output goes to your screen and pauses for keyboard input at the end of each page. In this way, you can move through a file page by page to be sure it has the information you want before deciding to use unsqueeze.

## LU and LRUN

When downloading files from a remote bulletin board system, it is important to get all the parts of a package. Some programs require special datafiles and multiple modules before they will run. To simplify downloading these types of programs and to save disk space, a program called LU (library utility) is

used to bind the appropriate files together into one.
Disk space is usually gained when several related files are put into a library. This is because CP/M has a minimum allocation of space per file. These are usually 1 K or 2 K blocks. Though only part of a block at the end of a file is used, the remaining empty space is still assigned to that file and can't be used by any other file. This wasted space can be recovered by putting several files into a library. Although the library directory occupies some disk space, you won't use as much if you combine multiple files.
LU has a variety of commands available once it is running. Typing LU puts you into the Interactive mode of the program; you'll then see a - ? > , which means the program is looking for a command.
The valid commands are:
-a-adds files to library.
-d-deletes files from library.
-e-extracts files from library.
-l-lists current library map.
-o-opens a library.
-r-reorganizes a library.
When you type in the command you want to execute, the ? prompt is changed to any letter you choose, signifying the program is waiting to process the filename. The exceptions are the -1 and $-r$ commands.

The -1 command prints out the
names and locations of all files in the currently open library. The -r command sorts the files into alphabetical order and releases unused file space.

The command you will most likely use is the -e command, which removes the specified file from the library, so you can run it. Before you can do that, though, you need to know the names of the files in the library. Use the -1 command to list them.

If you've downloaded a library from an electronic BBS, I recommend you first extract the document file that describes the library. This should let you know whether or not you need to extract all the library files. Since a program running inside a library file can't access other files in the library, you may have to extract all the files before running the program. On the other hand, programs like SQ and USQ can be run while still in the library by using LRUN. (More on that later.)
To extract a file from a library, you must first open the library with the -o command. Type LU (with a drive identifier if it isn't on the default drive). At the - ? $>$ prompt, type -o to get the $-\mathrm{O}>$ prompt. Then type the name of the file you want to open. Once you've opened the library, any subsequent commands will be assumed to apply to that library.

To extract a file, use the -e command to get the $-E>$ prompt. Type in a drive identifier if you want the file written to a disk other than the default one. Follow this with the filename of the library entry you want extracted. Wild cards (* and ?) can be used to remove several entries at once. The - $\mathrm{E}>$ prompt remains after each extraction.
After extracting a number of files, it's a good idea to use the -r command to reorganize the library and recover the freed disk space. Entering the -r command will start the procedure. If you follow the -r with a 1 , the reorganization will reset the number of directory entries to exactly the number of files left in the library, thereby recovering some of the space occupied by the directory.
There's no specific command to close the library; simply enter a blank line at any prompt. Opening a new library will also close the active library.

## Modifying a Library

If you have a group of files to put into a library, use the -o command to open the library. If you don't

UNLEASH THE POWER OF YOUR COMMODORE 64 WITH THE ULTIMATE INTERFACE
Compatible with C-128

- Control and monitor your home appliances, lights and security system
- Intelligently control almost any device
- Connect to Analog-to-Digital Converters
- Control Robots
- Perform automated testing
- Acquire data for laboratory and other instrumentation applications
- Many other uses

Don't make the mistake of buying a limited capability interface. Investigate our universally applicable Dual 6522 Versatile Interface Adapter (VIA) Board, which plugs into the expansion connector and provides:

Four 8 -bit fully bidirectional I/O ports \& eight handshake lines - Four 16 -bit timer/ counters - Full IRQ interrupt capability - Four convenient 16-pin DIP socket interface connections - Expandability up to four boards \& sixteen ports.
ORDER NOW! Price $\$ 169$, postpaid USA. Extensive documentation included. Each additional board $\$ 149$.
All orders shipped from stock within 24 hours via UPS. VISA/MasterCard welcomed
SCHNEDLER SYSTEMS
1501 N. Ivanhoe, Dept. R4 Arlington, VA 22205
Information/Telephone Orders (703) 237-4796
specify a name, the default (LIBRARY.LBR) will be used. When you open a new library, you must specify the number of directory entries. It's best to plan for more entries than you have, just in case you want to add some later. However, the -r command can be used to add entries later, if you want to save disk space.

Once you've created a library, you can add members to it by using the -a command. Type -a to change the prompt to -A>. Now each filename you type will be added to the library. You can use wild cards. Be sure your number of files doesn't exceed your directory space.

To remove files from the library, use the -d command. It works much the same way as -a . However, keep in mind the following. During a work session, a copy of the directory for the active library is created on disk. When you delete files from the library, they are actually deleted from the copy directory. They aren't actually deleted until the library is closed. If you discover an error before closing the library, you can use a IC (CTRL C) to escape from LU without deleting those files.

Also, although the files are deleted from the library directory, the disk space they occupied is retained until you reorganize the directory.

## LRUN

The LRUN program can also be used to run a program that is inside a library. Use:

## LRUN [lbrname.lbr] [progname.com]

## [parameters]

The lbrname.lbr is the name of the library that contains the program to run; progname.com is the program to run; and parameters is a group of filenames or other information that the program needs in order to run. For instance,
LRUN COMMAND.LBR X.COM B:
would run the program X.COM (extended directory) found in library COMMAND.LBR. The B: would cause X.COM to list all the files on the B drive, their size, the amount of disk space used, the amount of free space left, the number of files on the disk and the number of unused directory positions. If the B : were omitted, the information would come from the default drive.

## Who to Thank

You might want to thank the authors of SQ and USQ and LU and

LRUN for their efforts. The author of SQ and USQ is Dick Greenlaw (251 Colony Court, Gahanna, OH 43230). You can reach him by phone evenings and weekends at 614-475-0172. The author of LU and LRUN is Gary Novosielski (21 W. Pierrepont Ave., Rutherford, NJ 07070). You can reach him by phone at 201-935-4087.

Please keep in mind that these folks don't market the programs, so you'll have to acquire them through the usual channels. It never hurts to let programmers know that their efforts are appreciated, though. Most of them donate their programs in hopes that others will benefit from them, and I've never encountered a programmer who resented a little public or private recognition.
Although these programs are in the public domain, you should be aware that their authors do have copyright notices on the programs. These notices prohibit the commercial sale of the programs or their documentation.

## File-Naming Conventions

A word about file-naming conventions. As mentioned earlier, squeezed files have a $Q$ as the next to the last letter. Many BBSs use the first eight letters to name the program and the last three letters to indicate the type of program. Table 1 provides you with some examples of what you can expect. XXX indicates the name of the file.

## Editor's Note:

As many of you have probably gathered, the original version of CP/M packaged with your C-128 does not support the RS- 232 port. Commodore has now revised the CP/M operating system to allow the use of the RS- 232 port directly from CP/M mode. At the time of this writing, Commodore had not publicized how you can obtain this new version. However, updates are available on major networks such as Viewtron, CompuServe and QuantumLink, and it has been unofficially stated that Commodore will provide the update to all registered C-128 owners.

Address all author correspondence to Cheryl Peterson, 750 85th St., \#3, Miami Beach, FL 33141.

## RAVE REVIEWS

RUN Magazine says，

＂．．．rugged design ．．．ease of use ．．．make it everyone＇s favorite ．．．＂
＂．．．outstanding 1525 emulation cannot be overemphasized．＂
＂．．． 1525 emulation is so near perfect ．．．you＇ll be hard pressed to find software designed to work with the Commodore ．．．that will not work ．．．＂
＂．．．it is a sophisticated interface ．．．posesses an above average level of quality ．．．＂RuN Dec． 1985 issue

# Computer Cleaners 

Your Choice Rag. $519.95 \$ \bigcirc 95$

## TV/MONITOR SCREEN RESTORER \& CLEANING KIT

Reduce eye fatigue by increasing the clarity of your TV or monitor screen. This kit contains a hard wax formulation to cover surface imperfections on TV screens and monitors. This restores maximum optical clarity, making what you see more distinct. Plus high absorbency cloths and an auto static spray cleaner allows you to clean your screen on a regular basis to keep your screen looking better than new. (This is a must for those who watch monitors or TVs for extended lengths of time.) List \$19.95. Sale \$9.95.

## DISK DRIVE CLEANER

Reg. \$19.95.
Sale \$9.95.

- $60 \%$ of all drive downtime is directly related to poorly maintained drives.
- Drives should be cleaned each week regardless os use.
- Drives are sensitive to smoke, dust \& all micro patricles.
- Systematic operator performed maintenance is the best way of ensuring error free use of your computer system.

This unique twin slot jacket design gives twice as many "wet-dry" cleanings per rotation as other leading brands. Non abrasive, $100 \%$ lint free, random fiber cleaners capture dust, smoke particles and disk oxide build up which insures you against disk and data loss from dirty disk drive heads just like you must clean your albums and tape players you must clean your disk drive heads to keep your disk drive working well. (24 cleanings per kit.) List $\$ 19.95$. Sale $\$ 9.95$.

## MEMTEK ${ }_{\text {products }}$

## ANTI-STATIC KEYBOARD CLEANER <br> Sale \$9.95

Now you can clean your computer keyboard fast, efficiently, and safely. The keyboard cleaning solution is exclusively formulated to remove skin oils, dust, and dirt that can destroy your equipment. Plus this non residue solution with anto-static properties will not build up like ordinary household cleaners so you can clean as much as you like without worry. Plus the lint free, high absorbency, nonabrasive cloths will not scratch or mar your equipment as they pick up dirt and grime in a matter of seconds.
List \$19.95. Sale \$9.95.

Add $\$ 3.00$ for shipping, handling and insurance. Illinois residents please add $61 / 4 \%$ tax. Add $\$ 6.00$ for CANADA, PUERTO RICO, HAWAII, ALASKA, APO-FPO orders. # C-128 AutoMenu 

## By DAVID DARUS and LOUIS WALLACE

The C-128 AutoMenu is designed to make it easy for you to load and run programs on the $\mathrm{C} \cdot 128$. It allows you to quickly and easily look through a disk's available program files and load and run them by simply pressing a key.

After carefully typing in Listing 1, save it to disk. You can save C-128 AutoMenu to any of your frequently used disks to save time later. In fact, by using the C-128's autoboot capability, you can set up each C-128 disk so that AutoMenu is automatically booted at powerup. (For a program that allows you to make self-booting program disks, see "Disk Commands on the C-128" in RUN's December 1985 issue.)

When you run or autoboot C-128 AutoMenu, it first checks to see if you are in 40 or 80 column mode, then formats its output accordingly. It will go to the disk for a minute and read in all the names and sizes of the program files on the disk. It will ig. nore sequential, user and relative files, since they are not executable programs.

Once the program names are in memory, it will list them in a window on the screen, with the program size on the far-right side of the window. You can use your cursor keys to move up or down through the list while

> As your library of C-128 programs grows by leaps and bounds, you'll need a quick and easy way to load and run all of them. Here's a program that does just that.

highlighting the program name under the cursor. If you wish, you can return to the top of the list by pressing the clr/home key.
Once you've found the program you want, simply press the return key while the cursor is on the program name, and your choice will be loaded and run if it is a C-128-compatible Basic program.
AutoMenu checks the load address of the file you choose; if the address isn't correct for a C-128 Basic program, AutoMenu compares it to the load address for C .64 Basic programs. If AutoMenu finds that the program loads at 2049 decimal, which is where the C-64 Basic programs start, it tells you that this may be a C-64 program and asks if you still wish to load and run it. If you reply yes, it will load it to the proper start of Basic for the C-128 and run it. (Note: Not all C-64

Basic programs will run unmodified in C-128 mode.)

If the load address is incorrect for C-128 or C-64 Basic, AutoMenu assumes the program is in machine language and asks if you wish to boot the program. Booting allows machine language programs to be loaded and activated all at once. It will only work on those machine language files whose start address is the same as the load address. In other words, if the load address is 32768 , booting will load it to 32768 and attempt to start it with a SYS 32768 . Machine language files that require starting from an address different from the load address cannot be executed this way.
If the program you want is not on the disk you're viewing, simply remove the current disk from the drive (do not remove a disk while the drive is spinning) and insert another disk. Then press the stop key. AutoMenu will load the directory of the new disk and display it for you.
Well, that's all there is to it. You'll find this program will add new dimensions to the use of your disk directory.

Address all author correspondence to David Darus and Louis Wallace, 6124B SW 11th Place, Gainesville, FL 32607.

# Introducing the Most Powerful Business Software Ever! 

FOR YOUR IBM • APPLE • MAC • TRS-8O • KAYPRO • COMMODORE • MSDOS OR CP/M COMPUTER*

Each Versabusiness module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

## VersaReceivables'm

$\$ 99.95$
VERSARECEEVABLES" is a complete menu-driven accounts receivable, invoicing, and monthly statement generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. Versareceivables* prints all necessary statements, invoices, and summary reports and can be linked with Versaledger II ${ }^{\prime \prime}$ and Versalnventory".

## VERSAPAYABLES ${ }^{*}$

## $\$ 99.95$

VERSAPAYABLES* is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES ${ }^{-}$maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES", you can even let your computer automatically select which vouchers are to be paid.

## VersaPayroll ${ }^{\text {™ }}$

$\$ 99.95$
VERSAPAYROL: ${ }^{*}$ is a powerful and sophisticated, but easy to use payroll system that keeps track of all govemment-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the Versaledger IT" system.

## VERSAINVENTORY**

## $\$ 99.95$

VERSALNVENTORY" is a complete inventory control system that gives you instant access to data on any item. VERSAlNVENTORY- keeps track of all information related to what items are in stock, out of stock, on backorder, etc, stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VersaRecervabies" system. Versaliventory'prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

## Versaledger II*

$\$ 149.95$
VERSALEDGER II* is a complete accounting system that grows as your business grows. Versa Ledger II" can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system without any additional software.

- VERSALEDGER IIW gives you almost unlimited storage capacity ( 300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.
Versaledger II" comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II" manual will help you become quickly familiar with VERSALEDGER II ${ }^{\text {u }}$, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

## FOR COMMODORE OWNERS ONLY!

Commodore owners only may now take $50 \%$ off our listed price of any module(s) from our VersaBusiness Series. All sales are final (our normal 30 -day money back guarantee does not apply to sale items).

## To Order:

Write or call Toll-free (800) 431-2818
(N.Y.S. residents call 914-425-1535)

- add $\$ 3$ for shipping in UPS areas
* add $\$ 4$ for C.O.D. or non-UPS areas

# "My purchase of RUN is a better investment than my computer-I get a much higher return on a much smaller investment!" 

D. Suggs, Tallahassee, Fla.

Join the thousands of C-64, Plus/4, and VIC-20 users around the world who enjoy subscribing to RUN every month. They've found RUN to be an unrivaled Commodore resource. And they're right-RUN is one of the fastest growing Commodore magazines on earth!
The convenience of personal delivery, plus a savings of $44 \%$ off the newsstand price are yours when you subscribe to RUN-the year-round Commodore companion.
You get 12 great issues for just $\$ 19.97$, plus special announcements and offers available only to RUN subscribers!
Each month, you'll learn the fun of computing while exploring the limitless possibilities of your Commodore.
Here's what satisfied readers are saying:
"I read many magazines after I bought my 64, but I

## YES! I want to make a great investment.

Send me 12 issues of RUN for the low subscription price of $\$ 19.97$. Ill save $44 \%$ off the newsstand price.

think that yours is the best. I now have a subscription and look forward to every new issue."-Eric D. Stolen, Manistee, MI
"In a remarkably short time, RUN has become the best journal for Commodore computer users. . I appreciate the coverage you devote to reader comments and questions (Magic, Mail RUN, and Commodore Clinic), as there is nearly always an interesting hint or tip in one of these columns!"-J. O'Hare, Victoria, B.C. Canada.
Throughout the year, you'll find:

- Exciting tips, Commodore tricks, and programming ideas in RUN's most popular column, "Magic".
- Challenging, fun, and educational software.
- A rundown of the products best suited for the new C-16 and Plus/4.
The benefits roll on. . .time-saving programming ideas, no-punches-pulled product reviews, applications to broaden your computing horizon, tutorials and assistance from reknowned authors in the Commodore field, and of course, great ideas and tricks that have worked for fellow Commodore users.

Act today-and save $44 \%$-joining the thousands of subscribers who've found that RUN is their best computing companion. Just send in the coupon or insert card, or call TOLL-FREE 1-800-258-5473. In NH, dial 1 . 924.9471.

## THE AMAZING VOICE MASTER® ${ }^{\circledR}$ <br> Speech and Music Processor

Your computer can talk in your own voice. Not a synthesizer but a true digitizer that records your natural voice quality-and in any language or accent. Words and phrases can be expanded without limit from disk.
And it will understand what you say. A real word recognizer for groups of 32 words or phrases with unlimited expansion from disk memory. Now you can have a two way conversation with your computer!

- Easy for the beginning programmer with new BASIC commands. Machine language programs and memory locations for the more experienced software author.
Exciting Music Bonus lets you hum or whistle to write and perform. Notes literally scroll by as you hum! Your composition can be edited, saved, and printed out. You don't have to know one note from another in order to write and compose!

Based upon new technologies invented by COVOX. One low price buys you the complete system-even a voice controlled black-jack game! In addition, you will receive a subscription to COVOX NEWS, a periodic newsletter about speech technology, applications, new products, up-dates, and user contributions. You will never find a better value for your computer.
ONLY \$89.95 includes all hardware and software. For telephone demonstration or additional information, call (503) 342-1271. FREE audio demo tape and brochure available. Available from your dealer or by mail. When ordering by mail add $\$ 4.00$ shipping and handling ( $\$ 10.00$ for foreign, $\$ 6.00$ Canada).
The Voice Master is available for the C64, C128, all Apple II's, and Atari 800, $800 \times$ L and 130XE. Specify model when ordering.

# Auto Menu 

## Simplify disk operations by loading programs with a single keystroke.

By JOE W. ROCKE

Auto Menu is a disk-based utility that takes the hassle out of loading a program. The Load and Run commands become a menu-driven operation. With a single keystroke, you select the program to be loaded. Your C-64 then takes over, automatically loading and running the selection. Even the most inexperienced newcomer can load a program.

The C-64 wedge and similar utilities provide shortcuts in typing the Load command. However, it's still up to you to remember and correctly type the program name. Everyone who uses a disk system has been confronted with a File Not Found message because of a typing error. Most of us have to load and read the disk directory unless a crib sheet of program names is handy.

## Simplified Operation

Auto Menu lists the disk directory in menu format. The disk directory is read automatically and listed in double-column form, which prevents all but the longest listing from scrolling off the screen.

Each filename is preceded by a letter that is assigned by Auto Menu. The letter serves as an identifier for program selection, and filenames are listed in the order the programs are stored on the disk. To load a program, press its filename's corre-
sponding letter. This will also clear the screen and display a loading message. A typical message display is as follows:

LOAD "PROGRAM NAM*",8,1 SEARCHING FOR PROGRAM NAM* LOADING

No further keyboard input is necessary after the initial menu selection. The loading operation takes place automatically, and, upon its completion, the computer automatically initiates a Run command. Finally, the menu program is removed from memory with a New command.

To facilitate the auto-run operation, the asterisk (*) pattern-matching format is used in Auto Menu's loading instruction, as described in the 1541 user's guide. Pattern matching simply means that the drive will load the first program that has a name matching the letters in the Load instruction. In this program, the first 12 letters of program names are used. As it's unlikely that a disk will have two programs with the same name, this pattern-matching format should not pose a problem.

The Auto Menu listing is not difficult to follow, as there is a minimum of branching within the program flow. Lines $10-120$ set up the header screen that is used to display the user prompts. A black background pro-
vides good contrast for C-64 systems using a TV as a monitor.

## Reading the Directory

Lines 130-260 contain the disk directory read routine. The directory is read as a sequential file using the GET\# statement. The disk name, file block numbers and program type are skipped, for this information is not needed. Filename characters are read one at a time and concatenated for storage in variable N\$ (line 180). Conditional statements in lines 160 and 190 cause quotes and embedded spaces in the normal directory listing to be skipped.
Files not considered a normal part of the menu are skipped by conditional statements in lines 200-210. For example, if the disk contained an automatic loader called Boot, there would be no need to load the program a second time. It is also unnecessary to load the menu file a second time. Therefore, these two files are excluded from the menu list. Similar conditional statements could be added to skip the listing of sequential files.

Line 250 checks status variable ST, which, if 0 , indicates the end of the filename stored in the disk directory. The name string that is temporarily stored in variable N\$ is transferred to subscripted variable $\mathrm{N} \$(\mathrm{~F})$ for later recall. Counter variable F is

# Finally, <br> The On-Line Service That HelpsYou Beat The Meter. 

Now CompuServe, The Source, or Dow Jones users can switch to Viewtron. It's easier-to-use and faster to get what you want. So it's less expensive.

Now you can save money on usage charges while you access on-line stock quotes, news, sports, real-time communications, auctions, banking, airfares, and an encyclopedia. Plus special Commodore services like: Ask the Experts, software reviews, and SIG's, and more.
Viewtron's navigation is more advanced than other on-line services. Plain English keywords take you right to the meat of things. Often you can "zero in" by hitting one button. And Viewtron runs in color on Commodore machines.
We charge no subscription fee, no monthly fee. Pay only

9 cents a minute weekday nights after 6 p.m., and weekends; 22 cents a minute weekdays.

Access Viewtron on any of the major communications networks at no extra charge. (A local call for most people).

To get Viewtron, you need a major credit card, disk drive, a modem, and a FREE Viewtron Starter Kit. (The Starter Kitincludes a FREE hour of Viewtron.) And for a great modem at a great price, check the coupon. Satisfaction is guaranteed or your money back. It's a limited-time offer, so order now.
Call anytime. 1(800) 543-1300, Dept. 7051. Or mail coupon.

then incremented, and program flow loops back to line 140 to read the next filename.

If status variable ST is not 0 , program flow jumps to line 260. At this point, the file is closed and disk operation ceases.

## Menu Display

The directory read routine stores all disk filenames in subscripted variable $\mathrm{N} \$(\mathrm{~F})$. The stored names are recalled for display by using a Print statement in a For... Next loop. The filenames are displayed in doublecolumn format because a long list of names would scroll off the screen. This double column is accomplished by lines 270-300.

Line 270 sets up the first column by limiting the loop count to half of counter variable F . The CHR $\$(\mathrm{E}+64)$ in the Print statement provides the identifying letter for each filename stored in subscripted variable N \$(E).

Line 280 returns the cursor to the home position and uses POKE 214,8 to reposition the cursor to print the second column of names. The loop in line 290 displays the last half of the names, printing them at $\mathrm{SPC}(20)$ to form the double-column display.

Lines $310-320$ reposition the cursor and print the prompts in the screen header.

Lines 330-350 use the Get statement to scan the keyboard for an input. Line 350 limits keyboard input to the range of letters in the filename menu listing. A wrong keypress is ignored and sends program flow back to line 330 to continue the keyboard scan.

Line 360 reads the ASCII value of the key pressed and subtracts 64 from the number. For example, the ASCII value of letter B is 66 . Subtracting 64 from 66 leaves 2 . The result is stored
in variable P for use in identifying the program identified by letter B. If you were to print $\mathrm{N} \$(\mathrm{P})$-i.e., $\mathrm{N} \$(2)$ you would see the second filename that was read from the directory.
Line 370 checks to see if filename $\mathrm{N} \$(\mathrm{P})$ is longer than 12 characters. A long filename is shortened to the first 12 characters and the pattern-matching asterisk is added to the name string.
Line 380 sets up the filename for the Load command in line 390. The MID\$ function is used to strip a space character from the filename. The Load command is then printed (line 390) in normal command format. (Note how CHR\$(34) is used to provide the quotes necessary in a Load command.)
The filename in quotes is followed by the device and command numbers in standard format. Command number 1 is added after the device number, so both Basic and machine code programs will load correctly.

Line 490 sets up variable $\mathrm{A} \$$ for automatic execution of the program loaded. The CHR \$(13) is added to variable A\$ to provide the equivalent of pressing the return key. Including A $\$$ in a program statement causes the function to be executed, just as if you had pressed the return key.

Line 500 is the key to the automatic run operation. The Pokes in the line cause the computer to enter its own instructions! Line 500 represents a "dynamic keyboard" technique, whereby the computer performs functions normally requiring keyboard input. When this line is executed, the computer executes a Run command. The CHR\$(13) in variable A\$ forces a RETURN in the keyboard buffer and executes the instructions.

If you have an early C-64, line 500
may not work properly because of changes made in later ROM (read only memory) versions. Try substituting POKE 527 or 528 for POKE 631 and POKE 525 for Poke 198.
Line 510 erases the menu program from memory with a New command. This line is executed last, with the word NEW appearing momentarily on the screen.

## System Calls

Lines 400-480 explain the statements required to automatically run a machine-code program that is initiated by a system call. It will be necessary to insert lines similar to the examples in lines 460-480 to reflect machine-code programs you may have on the disk.
The conditional statement at the beginning of each line provides a means of distinguishing between Ba sic and machine-code programs. By assigning to variable A\$ the SYS syntax followed by the call address, the call can be initiated by line 500 .
You may use the pattern-matching asterisk in machine-code program names just as it is used in line 370. In setting up the LEFT\$ function, you may set the number of name characters as desired. The lines included in the listing are for example only.

## Auto Boot

That's all there is to it! Type in Listing 1 and save Auto Menu on each of your disks. When you want to use it, load and run it. The automated operation sure beats typing in loading commands!

Address all author correspondence to Joe W. Rocke, 224 W. Benson, Ridgecrest, CA 93555.

# Automatic Line Numbers 

Save yourself the tedium and time required to type in program line numbers. This easy-to-use utility enters them for you.

## By MICHAEL BROUSSARD

The AutoNum program adds a new command to Basic that provides automatic line numbering as you type. Written in machine language, AutoNum is in the form of a Basic loader (Listing 1), which you must carefully type in. Be sure you save it before running it, as the program Pokes the machine language into upper RAM and then deletes itself.

Using AutoNum is easy. Each time you turn on (or reset) your Commodore, you must first load and run the AutoNum loader. The loader clears the screen and prints a message to let you know it is initializing. It then Pokes a Basic wedge into a place in RAM where it won't interfere with the Basic program you are entering. (How this wedge works is explained later.) After a few seconds, the loader prints the following set of abbreviated instructions:

TO ENABLE, TYPE:
AUTO <increment>
TO DISABLE, TYPE:

## AUTO

Finally, the loader clears memory, and you are ready to start typing your program. Suppose you wish to number your program by tens. Simply type in:

## AUTO 10

and press the return key. You will get
a Ready message back from Basic, and AutoNum will be turned on. Now you type in the first line of your program. Suppose it is:

## 100 PRINT

When you type in the line and press the return key, the line becomes part of the Basic program in memory, as usual. In addition, AutoNum prints the next line number:

## 110

The cursor is then positioned so that you are ready to type in the next program line.

Continue entering program lines in this fashion until you have typed in the whole program or until you want to enter a direct command, like Save. To perform the latter, simply backspace over the line number AutoNum printed and then type in your direct command. Or you can simply press the return key after the next AutoNum line number. Either action will disable AutoNum until you type in another line beginning with a line number. Then AutoNum will step in and start printing line numbers again, continuing from the new line number.

To turn off AutoNum completely, simply type:

## AUTO

in Direct mode. (If you type this command next to a line number and press the return key, you will add an
unwanted line to your program and AutoNum will still be enabled.)

That's all there is to using the program. The rest of this article is directed toward more advanced programmers and tells how to customize the loader in order to place AutoNum at a particular RAM location. It also explains how AutoNum works.

## Customizing the Loader

As mentioned earlier, AutoNum resides in a part of RAM that won't interfere with Basic programs. On the Commodore 64, it begins at location 49152. On the VIC-20, there is no free RAM area for machine language use, so the loader "steals" a page of Basic program space by moving the top-of-memory pointer down 256 bytes. If you won't be using AutoNum with a Datassette, you can reclaim this program space by deleting line 90 of the loader and chang. ing line 100 to read:
100 BASE $=828$
This will cause AutoNum to be Poked into the cassette buffer, which is a great place to put short machine language subroutines as long as you are not using a Datassette. (C. 64 users can also redirect AutoNum to the cassette buffer by making the same changes.)

For those of you familiar with machine language, you can move AutoNum to any other location in RAM

## Sensational Prices!

$\$ 300$ \& up $\quad 8.75$
by changing the value assigned to BASE on line 100. (Of course, you must be careful not to place the routine where it interferes with Basic or with the operating system, or you might cause a "crash.")

## How AutoNum Works

Each time you type in a line and press the return key, Commodore's built-in Basic interpreter has to decide what to do with it. If it begins with a line number, Basic assumes it is a line to be added to the program currently in memory and acts accordingly. If the line doesn't begin with a number, Basic assumes it is a direct command (like New or Save, for example) and executes it immediately. The part of Basic responsible for reading and processing lines is built into ROM, and a pointer to this important main processing routine is stored at RAM locations 770 and 771.

Ordinary Basic will display a syntax error if you attempt to use the Auto command without first running the AutoNum loader. So how does the AutoNum loader add a new command, Auto in this instance, to the Basic repertoire? The loader Pokes a machine language subroutine into RAM where it won't be disturbed by Basic. The loader then changes the pointer stored at 770 and 771. From then on, control is diverted to AutoNum instead of to Basic's main processing loop.

If AutoNum is enabled, it prints a line number. After a line is typed in at the keyboard, AutoNum examines it to determine whether or not it begins with the word "Auto." If it does, then AutoNum processes the line, and regular Basic never gets involved. If the line does not begin with "Auto," the line is passed on to Basic to be processed in the usual fashion.

You can easily see why this diversionary tactic is called a wedge. In effect, AutoNum is "wedged" between the user and Basic's regular processing loop. (Another popular wedge is the DOS wedge, which works much the same way. It checks each line you type in to see if it begins with a " $>$ "; if it does, it processes the line as a disk command instead of passing the line on to Basic.)

There are many good books that can teach you more about wedges. Two of the best are Tool Kit: Basic, by Dan Heeb (Commodore Publications) and Machine Language for the Commodore 64 and Other Commodore Computers, by Jim Butterfield (Brady Communications).

## It was one of those weeks.

Monday, you needed to locate an important account and type a 10 page report.
Tuesday, you had to adjust the family budget because the bank adjusted your mortgage.
Wednesday, a client needed graphics for a last-minute presenttaction.
By Thursday, you were wishing you'd had one software package that could have handled everything.

## Get Vital Information In Seconds!

Now, you and your C-64 or C-128 can pull all the loose ends together with ReRUN's Productivity Pak-a disk full of ready torus home applications. Sensational programs from RUN magazine, plus several neverbeforepublished programs. Word processing, database management, home finance, spreadsheet calculating, telecommunications and more-

everything on one disk for your most important computing tasks.

## File It, Find It!

The Productivity Yak features RUN's highly-acclaimed and completely updated "DATAFILE" series (including DFCalc!)-a practical database management system by Mike Konshak that's been a proven winner with $R U N$ readers:
"Outstanding! This program is probably the best I have found in any magazine, and is already at use in my business applications as well as my personal library."-David Rice

Sterling, IL

## Put Your Commodore to Work

You'll also tap into such never-before published programs as "HOME FINANCE AID" -watch your Commodore determine your mortgage loan payments, or calculate the future value of your investments!
Plus, you'll get "BASIC 4.5 ", a programming utility that makes your C. 64 more productive. It includes commands for sprite graphics and animation, as well as improved disk handling.
The Productivity Yak includes a booklet with complete documentation and loading instructions. Easy to use, easy to order.
Don't let another week go by without it. Simply return the coupon with payment today, or call $1-800-258-5473$.
(In NH, dial 1.924.9471.)
Programs will run on C54 and C188 (in 64 mode) dist coll.

Find the right program for every job

# AutoBoot 

# How would you like to run your Basic and machine language programs effortlessly? With this handy utility, you can. 

By DOUG SMOAK

If you would like your Basic programs to run automatically without typing in RUN, or have machine language programs start without having to remember what SYS address to use, then you'll appreciate AutoBoot. AutoBoot makes self-starting "boots" that load and run Basic or machine language programs from disk.

## How To Use AutoBoot

After typing in Listing 1, save it before running it. After running, you may either read instructions or continue with the creation of a boot. After a pause in which the program sets up an array, you must supply the name of the program you want to run automatically. You can use any valid filename and can have a wild card (*) on the end.

You must then supply a name for the boot itself. The best way to do this is first to save the program under a simple name such as $A$, then call the boot the actual name of the program. Then, when the user loads
"program name",8,1
the boot will automatically load and run the intended program. Note that the boot must be loaded as a nonrelocating program file, hence the, 1 after the device number 8 . Also note that the disk to which you want the boot saved must be in the drive while AutoBoot is creating the boot. You can transfer the boots with a program such as Copy All or other single-file
transfer programs, but this is an unnecessary step.

## How and Why It Works

The secret to AutoBoot lies in where the boots load. They load in over the stack of the 6510 CPU. This makes the Load Kernal routine load program data into location \$0202 (decimal 514). When the Load Kernal routine reaches the last RTS (return to stack), control is returned to location \$0203 (decimal 515).

Location $\$ 0203$ is the start of the loading and running routines, so the computer executes these routines without returning to Basic.

AutoBoot starts by substituting input into an array before opening a write-program file. Since the first two bytes of a program file make up the Load address, Autoboot can create a program that will load over the stack and directly into the input buffer.

## Program Description

To help you understand the program, and in case you want to modify it for your own needs, I'll give a brief breakdown of it.

Lines $10-30$ initialize the variables, clear the screen, set screen and border colors and prompt for instructions.

Lines 40-50 set up the initial values for the array that will be modified by your input.

Lines $60-70$ begin the input by first getting the name of the file to
be loaded and checking to see if it is too short ("') or too long (LEN(N\$) $>16$ ). Note that only program files may be loaded.
Lines 80-90 continue input by asking if the program to be loaded and run is in Basic or machine language.

Lines 100-130 set up the array to load a machine language file and SYS to its starting address. Note that the lowest address allowed by line 120 is 2048. If you have a special need for a lower address, such as a short program that loads into the cassette buffer, then change or eliminate the If. . . Then in line 120.

Lines 140-150 put the name of the file to be loaded and run into the proper place in the array.

Lines 160-170 handle input of the name for the boot itself. This is the name that will later be loaded
"name",8,1
Lines 180-260 do the actual writing of the boot to disk. Line 200 sets the load address (decimal 256, HEX $\$ 0100$ ) to the start of the CPU's stack. Line 220 makes the screen border change colors, so that when the drive pauses, you know the program is still running.

Lines 270-440 make up the instruction subroutine. They, along with line 30 , could be eliminated, but it's nice to have them.

Lines 450-660 contain the data that is read into the array from line 50.

Lines 670-690 read the disk drive's

## Final Notes

AutoBoot, as is, will not create boots that display the searching and loading messages for the program to be autorun. I felt this would be confusing to novice users. If you want the messages for your own peace of mind, then substitute the number

128 for the first 0 after the first 169 in line 620 . If you want to use a drive with a device number other than 8 , then substitute 9 s for the two 8 s in line 620 .
Above all, remember that the boots must be loaded with a ", 1 " after the 8 , such as

## LOAD "PROGRAM",8,1

I hope you enjoy making your pro-
grams run automatically. It adds a professional touch and keeps control in the hands of the programmer; novice users can then be free to interact with the software with a minimum of effort.

## COMPUTEREYES ${ }^{\text {|m }}$

## VIDEO IMAGES ON YOUR COMPUTER!

Finally-an inexpensive way to capture real-world images on your computer's graphics displayl COMPUTEREYES* is an innovative slow-scan device that connects between any standard video source (video tape recorder, video camera, videodisk, etc.) and your computer. Under simple software control, a b/w image is acquired in less than six seconds. Unique multi-scan modes also provide realistic grey-scale images. Hundreds of applications!

Package includes interface module, complete easy-to-use software support on disk, owner's manual, and one year warranty all for $\$ 129.95$ plus $\$ 4.0058 \mathrm{H}$ (USA).

Also available as a complete package including:

- COMPUTEREYES*
- Quality b/w video camera
- Connecting cable for only $\$ 399.95$ plus $\$ 9.00 \mathrm{~S} 8 \mathrm{H}$.

Demo disk available for $\$ 10.00$ postpaid (refundable).

See your dealer or order direct Mass residents add $5 \%$ sales tax. Mastercard. Visa accepted. To order, or for more information, write or call:

## only $\$ 129.95$

# Toll Free Order Line <br> 1-800-387-3208 ї: PRO.LINE SERIOUS SOFTWARE 

WORDPRO $128^{\text {TM }}$ All applicable features of the previous WordPro Series programs.
PLUS: Fully proportional printing ... with character and word spacing capability. Multiple disk drives . . up to tour CBM $^{\top M}$, MSD ${ }^{\top M}$, or Indus GTTM drives 500 lines of text per file... 80 colums wide. Alternating headers, tooters, pages and margin offsets. Selectable double column output. Supports more than 50 different matrix and letter quality printers. An 00PS! buffer .... for easy proof reading. Access to all available special characters on your printer. Display of those special characters on the screen. Local and Global options. 80 column text entry and video output. 160 column graphic page display... for easy formatting. Automatic file name storage. $\$ 69.95$

WORDPRO 64 the first of the completely new generation of word processing programs for Commodore computers. WORDPRO 64 is all you've ever dreamed of in a word processor. You'll be able to view an entire 160 column page on a single 40 column screen, scroll sideways, output in columnar form, pick your own screen and text colour, and configure the program to your own unique requirements - and words won't break at the end of a screen line. You won't believe what else Steve has put in WORDPRO 64, like single pass double column output! Easy to use and easy to define Special Characters. Margin offset for double side printing and 100\% proportional spacing capability! Available now
$\$ 49.95$

SPELLPRO 64 is a new and sophisticated state-of-the-art spell checking program by Jim Butterfield and Pro-Line Software for the WordPro Series of word processing programs. SpellPro's "Butterfield Basic" dictionary may be expanded to check up to 50,000 words, and SpellPro's ease of use is second to none. Anyone familiar with WordPro will be able to use SpellPro instantly. SpellPro 64 can be used with a Commodore 1541 or compatible disk drive and a Commodore or suitably interfaced ASCII printer (works with Speedscript).
$\$ 49.95$
C POWER is a fully implemented Kernihan and Ritchie version of the "C" language for the Commodore 64. Written by Brian Hilchie, our new C Power package includes a C SHELL command interpreter, EDITOR. SYNTAX CHECKING EDITOR. COMPILER, LINKER, MATH LIBRARY, STANDARD LIBRARY, and SYSTEM LIBRARY. C POWER compiles directly to native 6510 machine code, and does not require the extra overhead of some competing C Compilers that compile to " $P$ " code or use some other intermediate step. C POWER is a serious cookie
$\$ 99.95$

PROFILE 64 is the latest creation of Steve Punter, the originator of the WordPro Series of word processors. As with WordPro. Steve has made ProFile the most easily learned data base yet. Anyone familiar with WordPro will find the family resemblance comforting and will have ProFile off and running right out of the box. Profile can cram as many as 4000 records on just one CBM 1541 format diskette, print as many mailing labels across a page as the printer can handle and can print out reports with multi-line headers and automatic page numbers. Profile is the first easy-to-use data base program worthy of the Pro-Line name. For the Commodore 1541 or compatible disk drive and a Commodore or suitably interfaced ASCII printer
$\$ 49.95$

CASHBOX 64 by Howard Rotenburg brings point of sale Inventory control to your Commodore 64 in an easy to learn program that any Salesperson can operate. Cashbox handles both cash and credit cards by name. Inventory is automatically adjusted by each sale. Inventory reports can be printed by ITEM or SUPPLIER, including wholesale/retail costs, reorder levels, and stock on hand and on order. Access is password controlled for security. Sales reports can be printed with daily, weekly, and monthly totals. Personnel reports will list all of your personnel with important information including salaries, starting dates, social insurance and more. It will also report sales and returns by employee, permitting you to assess performance. $\$ 49.95$

POWER 64 is ready to delight and amaze a new generation of programmers on the Commodore 64 machine. If you like Brad Templeton's POWER programmer's utility on other Commodore computers, you'll love the extra features Brad was able to implement in the new POWER 64, a BASIC programmer's toolkit. Jim Butterfield wrote the book and Brad Templeton the program. For the Commodore 64 equipped with a Commodore 1541 disk drive. Includes MorePower free.
$\$ 49.95$

PAL 64 is the very first truly sophisticated machine language assembler available for the new Commodore 64 computer. PAL 64, Brad Templeton's "Personal Assembly Language," a machine language toolkit, is a natural for the 64 and works particularly well in conjunction with POWER 64. Some of the best 65 XX programmers in the world are already in love with PAL 64 (they must be, because without exception they all refused to give up their PAL 64 assembler after testing it). PAL 64 comes complete with a finely detailed manual by Brad Templeton. Your PAL 64 is waiting for you now at your Pro-Line Software dealer.
$\$ 49.95$

## HIGH PRODUCTIVITY... for your 1541!

The NEW GT4 'HI-PRODUCTIVITY' Cartridge from PRO-LINE turns your old. slow 1541 disk drive into a fully functioned. super fast. state-ot-the-art SUPER DRIVE. NO INSTALLATION ... simply plug the GT4 Cartridge into your Commodore 64's cartridge slot. FAST load...FAST save... FAST directory...FAST single disk backup FAST dual disk backup... FAST header .. FAST . . FAST . . FAST!!! NEW. added 'BASIC 4.0' commands allow the luxury and convenience of Commodore DISK BASIC. such as HEADER. DIRECTORY. CATALOG. COLLECT. BACKUP. RENAME. SCRATCH DLOAD, DSAVE, DOPEN. DCLOSE, and RECORD No. NEW, added EXTRA commands like DVERIFY. DSTAT. OFF. DISABLE and RESET

## NEW FOR '86!

## ReRUN <br> Get Every Program In RUN

It's the best software news of 1986 ! Now you can get all of your favorite ready-to-run pro-grams-not just selected programs-from RUN Magazine. Introducing ReRUN Bi-Monthly. . . one super disk containing two months' worth of all the outstanding Commodore programs listed in RUN. We've increased our frequency to serve you better. Each disk is packed with applications, utilities, and games that you can use in a ready-to-run format.

## FREE Bonus Program!

And as a special bonus, each ReRUN Bi-Monthly features a previously unpublished bonus program. You'll get a FREE high-quality program that will be a perfect complement to your Commodore software library.

## The Latest RUN Programs-Instantly!

Throughout the year, you'll enjoy every program published in the two most recent issues of RUN-without enduring timeconsuming keyboarding and debugging. Each issue comes with a Four-color documentation booklet so you can boot up your favorite programs in just minutes!

## Subscribe Now-SAVE 30\%

And if you subscribe to ReRUN now, you'll save $30 \%$ off the single copy price! You get all six issues for just $\$ 89.97$. Or, order individually and pay $\$ 21.47$ for each bi-monthly disk.

Get more great Commodore programs more often in 1986, plus free bonus programs, and a $30 \%$ savings with a one-year subscription.

You'll get it all in the new ReRUN.

## YESI I WANT MORE RERUN IN '86. PLEASE SEND ME:

$\square 1 \mathrm{yr}$. ( 6 issues) for $\$ 89.97$. I save $30 \%$ off the individual price.

# 1541 Number Changer 

> All you need is a sharp knife and a steady hand to change your disk drive device number with this simple hardware construction project.

By LARRY COTTON

Photo 1. Jumpers to be cut to change the disk drive device numbers in the older version of the 1541.

Photo 2. Jumpers to be cut to change the disk drive device numbers in the newer version of the 1541.

Moy Nol Reprint Withoul Pernission

Some Commodore 64 programs are easiest to use with two 1541 disk drives because dual drives allow you to create backup files quickly and save data during program execution. When you finally buy that second disk drive, you'll probably want to more or less permanently change the device number (normally 8 ), to avoid having to change it via software every time.

On page 40 of the 1541 User's Manual is a step-by-step procedure on how to make this change. However, on some models it's impossible to follow these directions to the letter.

After disconnecting power and removing the case and the perforated metal housing through step 6 , look at the top of the circuit board (where the components are mounted) with the disk door (the front) toward you.

Step 7 says to locate the device number jumpers. There are two possible places the jumpers can be located on the board, depending on which construction you have. If you own what we'll call version A (older drives), they will be on the left edge in the middle of the board, as the book says. But if you have version B, they'll be located slightly to the front and left of the center of the board.

Don't look for wires. Do look for two $1 / 4$-inch white circles around shiny silver spots. These are the jumpers. On version A, they are labeled 1 and 2 (see Photo 1). On version B, they are unlabeled (see Photo 2).
What you must do is destroy the little connecting strip (trace) between a pair (or between both pairs) of the D-shaped spots. This is the equivalent
of snipping a short wire jumper soldered between two points on a circuit board.

Which jumper do you cut? Again, this depends on which construction you have. If you have version A, your new device number will be the sum of 8 and the number of the jumper you cut. For example, if you cut jumper 1, your new device number will be 9 .

If you have version B, cutting the jumper nearest the front will convert your disk drive from device 8 to device 9 . If you cut only the rear-most jumper, you'll convert your drive from 8 to 10 . If you cut both jumpers, your new device number will be 11 .

The cutting (actually more like a scraping) should be done with a sharp-pointed knife. A number 11 blade in an X-acto knife is ideal. Scrape until you can see the circuit board through the gap.

Should you make a mistake or change your mind, you can easily reconnect the jumper by soldering. Use a pencil gun of no more than 30 watts, tinned well, and very carefully apply gun and solder to the D•pads, letting the solder flow across the gap.

Test your work before you put the case back together by loading a disk directory with your new device number (for example, LOAD " $\$$ ",9). If all is well, carefully reassemble the metal housing and case and enjoy your second disk drive!

Address all author correspondence to Larry Cotton, 3513 Canterbury Road, New Bern, NC 28560.

## BASICALLY SPEAKING

# Poking Around The Screen 

By ALTA MOSER and JIM BORDEN

The following article will be helpful to users who don't want to wait for Print statements. How and where to Poke the screen is explained, and several formulas and sample programs are provided.
The formula to Poke a character at a given location on the screen is:
$\mathrm{P}=1024+\mathrm{X}+40 * \mathrm{Y}$
Here, P is the location to Poke. To find this location, start with the beginning of screen memory (1024), add the column ( X ) and, finally, add the product of 40 and the row (Y). For the formula to work properly, columns must be numbered from 0 to 39 , and rows from 0 to 24 .
You can think of screen memory as a chart, with X and Y as the coordinates by which you can find any point on the chart. Go across to any column and down to any row, and where the two intersect will be the location for that row and column.
The formula uses 40 because there are 40 columns on the screen (numbered 0 to 39 , of course).
Let's assume you want to Poke column 1, row 1, with the letter A. You can look up the value to Poke in Appendix E of the C-64's user's guide. The letter A is stored in screen memory as a 1 . Here is a program to store it:

[^7]> Character placement via Pokes on the screen is fun, fast and fascinating. Never again will you have to rely on the cumbersome Print statement for accessing screen locations.

Row 1, column 1, is location 1065. You can check Appendix G of the C-64's user's guide to confirm this. If you omitted the 40 from the formula, the computer would figure the location like this:

```
10 X=1:Y=1
20 P}=1024+X+
30 POKE P,1
```

Obviously, the computer would Poke 1 into location 1026, which is column 2, row 0 in screen memory.

Now try this:
5 PRINT " \{SHFT CLR\}"
10 FOR T $=1$ TO 10
20 INPUT "COLUMN (0-39)";X
30 INPUT "ROW (0-24)";Y
40 PRINT "\{HOME\}"
$50 \mathrm{P}=1024+\mathrm{X}+40^{*} \mathrm{Y}$
60 POKE P, 0
70 NEXT T

How would you like to fill the entire screen memory? This program is one way to do it:
1 PRINT "\{SHFT CLR\}"
5 FOR X $=0$ TO 39
10 FOR Y $=0$ TO 24
$15 \mathrm{P}=1024+\mathrm{X}+40^{*} \mathrm{Y}$
20 POKE P, 102
25 NEXT Y:NEXT X
30 GOTO30
Now that you know X can be one of 40 numbers ( $0-39$ ) and Y one of 25 (0-24), you can Poke any number of random locations. The following program will demonstrate this:
1 PRINT "\{SHFT CLR\}"
2 INPUT "HOW MANY POKE
LOCATIONS";PL
5 FOR H=1 TO PL
$10 \mathrm{X}=\mathrm{INT}(40 * \mathrm{RND}(1))$
$20 \mathrm{Y}=\mathrm{INT}(25 * \mathrm{RND}(1))$
$30 \mathrm{P}=1024+\mathrm{X}+40 * \mathrm{Y}$
40 POKE $\mathrm{P}, 81$
50 NEXT H
60 GOTO60
Now would be a good time to consider a companion formula to Poke color memory, since the formula uses the same X and Y coordinates. Another look at the Color Memory Map (Appendix G) will show that color memory begins at location 55296. The column and row numbers remain the same. (C-128 owners should type, in Direct mode,
BANK 15 \{return\}
to ensure this memory is banked in properly. Also, be sure you are in 40 column mode.)

## RUN It Right

With that in mind, the formula to Poke a value in color memory is:
$\mathrm{CP}=55296+\mathrm{X}+40 * \mathrm{Y}$
The Poke numbers for color are 0-15 (again, refer to Appendix G).

If you wanted to randomly color the characters Poked into random locations in the previous program, you could do it by adding these lines:
$25 \mathrm{C}=\mathrm{INT}(16 * \operatorname{RND}(1))$
$35 \mathrm{CP}=55296+\mathrm{X}+40 * \mathrm{Y}$
45 POKE CP,C
Have you noticed that you may have fewer characters than you asked for in line 5? There are two reasons for this. One, if the computer randomly selected the same row and column number twice, it would Poke the same character in the same location twice. Two, if you're using color, the random color number Poked might be the same as the background color, so the Poked character, although there, wouldn't be visible.

But you can control your background color to eliminate the problem of having the character the same color. The location to Poke the background color is 53281. (You can also change the border color with POKE 53280 , but we're mainly interested in controlling the background.) Let's change the background to black and eliminate black as a possible random color number. In the previous program, add this line:
3 POKE 53281,0:PRINT "\{CTRL 2\}"
And change line 25 to:
$25 \mathrm{C}=\mathrm{INT}(15 * \operatorname{RND}(1))+1$
Now every color should show up on a black screen.

What you did was Poke the background to 0 (black) and change the random number selection for colors, so the computer would have to use the numbers 1 to 15 , thereby eliminating 0 as a possible character color.

To get the effect of a stained glass window, try changing the border to black (POKE 53280,0) and using 1000 for PL. Those black spaces you see without any color are the result of combinations not chosen by the random numbers. If you want to color the entire screen, make the following changes to the previous program:

Delete lines 2 and 5.
Change line 10 to:
10 FOR X $=0$ TO 39
Change line 20 to:
20 FOR $\mathrm{Y}=0$ TO 24
And change line 50 to:
50 NEXT $\Varangle$ NEXTX
www.Commodore.ca
Moy Not Reprint Withoul Permission

But what if you only wanted to use a $10 \times 10$ grid on the lower part of the screen? Well, you'd only use part of the screen memory map. Begin by determining which column and row this part will start and end with. For the sake of simplicity, let's assume column 10 and row 10 will be your starting point, and use ten columns across and ten rows down.

So, your rows and columns will be from 10 to 19 , with 10 as the first, 19 as the last. Type NEW to clear any old program and enter the following lines:
5 PRINT "\{SHFT CLR\}"
15 FOR X=10 TO 19
20 FOR Y $=10$ TO 19
$25 \mathrm{P}=1024+\mathrm{X}+40^{*} \mathrm{Y}$
30 POKE P, 81

## 35 NEXT Y:NEXT X

Line 5 clears the screen. Lines 15 and 20 define the limits of your grid, starting at column 10 and row 10 and ending at column 19 and row 19. Line 25 is your Poke formula and line 30 prints a ball at column 10 and row 10 . Line 35 sends the computer back to line 20 , where it repeats the process to print another ball at the next Poke location.

If you want to color the grid, add these lines:
$28 \mathrm{CP}=55296+\mathrm{X}+40^{*} \mathrm{Y}$
31 POKE CP, 5
Line 28 is the color Poke formula. Line 31 makes whatever is in that location green, which is color Poke number 5 . You could use any number from 0 to 15 to find a color you like better. Or change the background to find a more pleasing combination.

Maybe you'd like to number your locations across and down. No problem.

The grid starts on row 10 , so your numbers across will be on row 9 and will be from 0 to 9 . You could number from 1 to 10 , but the 0 on the 10 would extend one column beyond the grid, causing you to expand your grid with a step in the For. . . Next statement. Anyway, it's good practice to start your numbering with 0 , since the formula is designed to use 0 . The Poke value for a 0 is 48 . The column numbers will be the same, from 10 to 19 with a row number of 9 .

Add the following lines to the previous program that printed the grid:
$40 \mathrm{Y}=9: \mathrm{S}=48$
50 FOR X=10 TO 19
$60 \mathrm{P}=1024+\mathrm{X}+40$ * Y
70 POKE P,S:S $=\mathrm{S}+1$
80 NEXT X
Line 40 sets the row to 9 and sets $S$ to 48 , the value of the character 0 .

Line 50 sets your column as 10 through 19. Line 60 is your familiar Poke formula. Line 70 puts 0 into column 10 , row 9 , and also adds 1 to $S$ to make $S=49$, which is the value of 1 . Line 80 simply returns to line 50 to repeat the process. I hope you were able to follow all that.

If you did, it should be relatively simple for you to number the rows. Just repeat the process, but change the column to 9 and the rows to 10 through 19. Here's how to do it:
$90 \mathrm{~S}=48: \mathrm{X}=9$ :FOR $\mathrm{Y}=10$ TO 19
$100 \mathrm{P}=1024+\mathrm{X}+40 * \mathrm{Y}$
120 POKE P,S:S $=\mathrm{S}+1$ : NEXT Y
Incidentally, you can avoid retyping the formula by putting it into a subroutine. If you put both Poke formulas (screen and color) into a subroutine, you could also color the numbers.

The following program is a recap of the program to Poke the grid, color the characters and number the rows and columns. It also colors the numbers in lines 70 and 120. POKE $\mathrm{CP}, 8$ in these lines colors the numbers yellow. Again, you can use any color number you want.

You aren't limited to 81 for the character, either. Try other numbers to achieve different results. For example, use POKE 122 for a cross-word-type grid or use $250(122+128$ for reverse video) for a reverse square. The program also makes use of a subroutine at line 500 for the formula. It is somewhat wasteful of memory, since more statements can be put on one line, but it was done for the sake of clarity.
5 PRINT"\{SHFT CLR\}"
15 FORX $=10 \mathrm{TO} 19$
20 FORY $=10$ TO19
25 GOSUB 500
30 POKEP, 81
31 POKE CP, 5
35 NEXT Y:NEXT X
$40 \mathrm{Y}=9: \mathrm{S}=48$
50 FORX $=10 \mathrm{TO} 19$
60 GOSUB 500
70 POKEP,S:POKE CP,8:S = $\mathrm{S}+1$
80 NEXTX
$90 \mathrm{~S}=48: \mathrm{X}=9: \mathrm{FORY}=10 \mathrm{TO} 19$
100 GOSUB 500
120 POKE P,S:POKE CP $8: \mathrm{S}=\mathrm{S}+1$
130 NEXTY
300 END
$500 \mathrm{P}=1024+\mathrm{X}+40 * \mathrm{Y}$
$505 \mathrm{CP}=55296+\mathrm{X}+40^{*} \mathrm{Y}$
510 RETURN

understand the programs above before trying these tricks.

When using a number frequently, it is better to assign the number to a variable early in the program. In the Poke formula, 1024 and 40 are often used, so assign these numbers to variables. Since 1024 is a base, it could be called BA. The screen width is 40 , so SW or XW could be used for this. It is better to use a two-character variable because it is less likely to be used within your program.

The reason variables run faster than numbers in Basic is simple. When a number is used in Basic, the digits are read and converted to a floating.point format. So, A=123 requires quite a bit of work by Basic. Variables, on the other hand, are stored in floating-point format to begin with (except integer variables, which end with the "\%" character).
So Basic can look up a variable much faster than it can convert a number to floating-point form. An added advantage of using a variable is that to modify all references to the base memory location, you need only change the line that assigns the orig. inal value.
Another way to save time is to eliminate multiplication or division. You may have noticed that the screen memory and color memory use the base memory location $+\mathrm{X}+40 * \mathrm{Y}$ (lines 500 and 505). Actually, line 505 can be written as:
$505 \mathrm{CP}=54272+\mathrm{P}$
This eliminates one multiplication and one addition. If these lines are used often (120 times in the last program above), the time saved adds up!
A little time can also be saved by eliminating the variable after the Next statement. This is something that will make the listing harder to follow, so unless you must use every trick for speed, it is probably better to retain this variable.
There is another place where time and memory can be saved. A littleused keyword in Basic is the userdefined function. A function can be used, for example, to create a random number in a certain range. Here is how to define a random number function:

## $7 \operatorname{DEF} \operatorname{FNR}(\mathrm{Z})=\operatorname{INT}(Z * \operatorname{RND}(1))+1$

DEF is used to define a function. The letters FN start the function name. The R is the name of this function. Any legal variable name can follow the FN to name the function. Then a dummy variable is required within parenthe-
ses. An equals sign follows the name and then comes the actual formula that defines the function.

To call the function, use a line like this one:
$200 \mathrm{X}=\mathrm{FNR}(15)$
Wherever the dummy is used in the definition, the number or variable will be used when the function is called. Here, 15 is used wherever Z appears in the definition. So, if the line above were called, X would be equal to some number from 1 to 15 . By changing the number in parentheses, you can change the range of random numbers.
The time saved with a function call results from replacing a subroutine. When a subroutine is called, Basic starts with the first line number and looks at each line in the program until it finds the number of the Gosub line. If the subroutine is placed at the end of the program, it takes a while to find it. A function definition must be at the start of a program, so it can be found quickly.
You can time your changes with Basis's built-in clock. Set it to 0 with TIS = " 000000 " on a line just before you start timing. Then, after the section is done, use PRINT TI to get the number of jiffies it took. (A jiffy is equal to $1 / 60$ of a second.)
Time the previous listing, then try the following listing to see the time you can save. The second program runs about one-third faster. Experiment to see how much time you can save in other programs.
5 PRINT" $\{\text { CLR HOME }\}^{\prime}: \mathrm{X}=\mathrm{Y}: \mathrm{Pl}=1024$ :

# TELECOMPUTING WORKSHOP 

By ROBERT SIMS

## Which terminal program would you recommend I buy?

Unless you intend to limit yourself to the simplest telecomputing applications, you will need more than one terminal program. Before you get a terminal program, you should answer these questions:

1. Will it work with my modem?
2. If I have an auto dial modem, will it work with my telephone dialing system?
3. Does it use the same text codes (ASCII) as the software used on the computer I will be calling?
4. Does it have the same file transfer protocol as the software used on the computer I will be calling?

Home telecomputing is still in a pioneer state, requiring some technical knowledge in order to make good use of its services. Unfortunately, many terminal programs are not fully documented, and you may not find answers to these questions in the manual. Similarly, salespeople in computer stores are not necessarily familiar with all the aspects of telecommunications.

If you are a beginner, your safest path is to depend on friends to help you answer these questions. If you are on your own, though, here are some guidelines through the technical muddle.

For general use, a terminal program should:
-transmit data in standard ASCII format and in CBM ASCII format.
-have a buffer in which you can capture incoming data to be stored to disk.
-allow you to load text files from Bencrefermodore.ca Chaticis

> Telecomputing Workshop is a monthly column directed to the needs of RUN readers who are using, or intend to use, their Commodore computers for telecommunications. This second installment answers your questions about terminal programs and accessing information services.

your disk to the buffer, to be sent over the modem.

A terminal program with these capabilities will allow you to exchange text with most other modem owners. However, most Commodore owners buy modems mainly to send and receive programs. Sending programs over a modem requires more stringent standards than sending text, because of the possibility of garbage (errors) caused by noise on the telephone line.

If someone is typing a message to you over the modem and an error occurs, it's usually no big deal; you can figure out what they are trying to say. But if an error creeps into a program listing as it is being transmitted, it could cause disastrous results when you try to use the program later.

## What is a protocol?

To ensure accurate transmission of programs and other error-sensitive
files, programmers have devised pro-tocols-special ways of sending information over the modem with built-in error checks.

As home telecommunications has grown, the various information services have created their own protocols. CompuServe has A and B protocols, and Punter bulletin boards use Punter protocols. In recent years, a protocol called XModem has emerged as a standard.

These various protocols are not compatible; for instance, you can't use XModem to swap files with a computer running Punter protocols. However, since XModem has become standard, most services are allowing callers to choose between XModem and the services' custom protocols, and software writers are adding XModem capability to their programs. (For example, Runterm Plus, the terminal program published in the December 1985 and January 1986 issues of $R U N$, is compatible with either XModem or Bozart protocols.)

A terminal program with XModem capability will get you onto CompuServe, The Source, Delphi and most local bulletin boards.

There are several very good public domain terminal programs that you should be able to get from your local user's group for the cost of a disk. (Public domain programs can be freely copied by anyone.) The most popular of these are XMOBUF and CBTERM.

Will any terminal program allow access to any on-line network?

The trend in home telecomputing is toward integration, which means

# B Telecomputing Workshop 

you need a special terminal program to access a particular on-line service. Viewtron, QuantumLink and PlayNet are examples of integrated systems. General-purpose terminal programs will not work with these services. If you want to access an integrated system, the system operator will see that you get the right terminal program.

Can you use any modem with any terminal program?

When you buy a modem, you'll probably find a terminal program in the package. The quality of these free terminal programs varies wildly, from rotten to very good. Whatever its general quality, you can be sure that it is compatible with your modem and will be adequate until you can acquire a more sophisticated terminal program.

However, when you go shopping for a terminal program, you should be aware that not all programs will work with all modems. Unless the documentation specifies that it works with a particular modem, you should not assume that it will. There are three reasons for possible incompatibility:

Pulse vs tone dialing. First, some modems, such as the 1660 , require software that automatically dials the telephone. There are two dialing systems in U.S. phone systems-pulse and tone. Some terminal programs dial with tones and some send pulses.

If a terminal program uses tones to dial the phone, then it will not work on a pulse line. On the other hand, a pulse-dialing terminal program will work on either pulse or tone systems. You can tell which system you have by looking at your telephone. If your phone has a dial, it's a pulse system; if it has buttons, it's a tone system.

Hardware incompatibility. Another, more technical, difference between automatic modems is in the signals used to put the modem on-line (pick up the phone) and take it off-line (hang up the phone). The CBM 1650, Westridge and Telelearning modems use one set of pick-up/hang-up signals; the Mitey Mo and HES II share a second set; the 1660 uses a third set of signals; and generic modems use still other pick-up/hang-up signals.

Although there is no real standard, themperbpinulatoreminal programs Moy Not Reprint Withoul Pernission
are written for the CBM 1650, and terminal programs that do not allow you to select your modem type usually work only with the 1650 -type modem.

Carrier signal. Another potential source of incompatibility is the carrier signal, which is used to detect another computer on the phone line. Some terminal programs will check for a carrier signal to be sure the two computers are properly connected. This type of terminal program may not work with the old version of the 1660 or with generic modems, which do not have an automatic carrierdetect feature.

## What is ASCII? Why are there different versions?

ASCII is an abbreviation for American Standard Code for Information Interchange. It is a code adopted by the U.S. government for exchanging data between computers that otherwise cannot communicate. ASCII was developed primarily to send simple documents using the standard typewriter keys, plus a few control codes that told the computer when a message started, ended, and so on.

As computers-especially personal computers-evolved, ASCII became outdated. It had no codes to represent color or graphics characters, for example. So, computer designers had to change or expand the ASCII codes to fit the unique needs of the new computers.

How do telecommunications networks answer all those calls with the same telephone number? Also, how do their systems handle it?

Most of the national information networks have a contract with a value-added carrier, whose business it is to provide special telephone lines that connect callers to the service. The carrier has a network of local telephone numbers, called nodes. The local customer calls the node and types in a log.on code. The carrier's computer then connects the caller to the information service's computer.

The value-added carrier and the information network are able to handle many callers at the same time because they have special phone equipment called multiplexers, which switch be-
tween several phone lines very rapidly. Similarly, they have multi-user computers, which are capable of dealing with several separate input lines so quickly that it seems to each caller that he is the only one connected to the system.

## What are DEC VT52 and VT100 emulators?

These are designations for computer terminals marketed by Digital Equipment Corporation (DEC). The VT stands for video terminal. DEC makes a lot of the computers used by information services, and the services' software uses special routines that communicate with DEC terminals. As more customers began to use personal computers to call the networks, software was written that caused the computer to emulate, or behave like, a DEC terminal.

All the terminal programs with which I'm familiar work only with disk drives. Is there a program that will work with a tape drive?

Because of the relatively high speed of modems and the low speed of tape drives, tape is not a practical storage medium for telecomputing. However, there are a few terminal programs floating around that are set up for tape drives. Because they're rare, you will have to do some digging. Your best bet for finding one is to look in the download libraries of local bulletin boards and to check with the programming special interest groups (SIGs) on the networks. (Maybe some of our readers can send in the names of some tape programs and where to find them.)

I am writing my own bulletin board program. How do I make it sense when a caller hangs up?

There are two ways to do this. The simplest is to check for the carrier signal. The carrier is detected by testing bit 4 of location 56577 on the C-64. In Basic, you test this way:

## $\mathrm{CA}=\operatorname{PEEK}(56577)$ AND 16

If $\mathrm{CA}=0$, then the carrier is still there. When a caller hangs up, the carrier signal is lost, and CA will equal 1. However, the old version of the Commodore 1660 does not have a carrier detect, so that method won't work with that modem.

## BACKUP PROTECTED SOFTWARE FAST with COPY II 64/128 ${ }^{\text {m }}$

From the team who brought you COPY II PLUS (Apple), COPY II PC (IBM) and COPY II MAC (Macintosh) comes a revolutionary new copy program for the Commodore 64 and 128 computers.

- Copies most* protected software - automatically.
- Copies even protected disks in just 2 minutes (single drive).
- Copies even protected disks in just 1 minute (dual drive).
- Maximum of four disk swaps on a single drive.
- Includes fast loader, 12 second format.

Requires a Commodore 64 or 128 computer with one or two 1541 or 1571 drives.
503/244-5782
M-F, 8-5:30, W. Coast Time
 CHECK, COD WELCOME (Prepyymen Required)
-We update Copy II 64 regularly to handle new protections; you as a registered owner may update at any time at a reduced price.

This product is provided for the purpose of enabling you to make archival copies only

## THE SMART WAY TO SAVE YOUR RUN

You'll find all your favorite issues of RUN in minutes-and in great conditionwith smart-looking binders or file cases from Jesse Jones.
Sturdy, protective file cases make for easy access to each issue, while rugged binders allow magazines to lay flat for easy reference. Both hold 12 issues, are custom-designed in brown with gold spine lettering, and are unconditionally guaranteed.

Order today!
File Cases: $\$ 6.95$ ea.; $3 / \$ 20 ; 6 / \$ 36$. Binders: $\$ 8.50$ ea.; $3 / \$ 24.75 ; 6 / \$ 48$.

## B Telecomputing Workshop

The second way is to write a subroutine that keeps track of the time between each character the caller sends. If the caller doesn't send any character for, say, ten minutes, then the program could assume the caller has hung up.

After buying my modem and software, I discovered that the information services in my area are long-distance calls. Don't they have 800 numbers I can call, so I don't have to pay long-distance on top of the access charges?

The phone numbers, or nodes, for most national information services are located in metropolitan areas, because that is where most of the traffic is. If you live outside a metropolitan area, there is a way to dial direct to the Big City, by using an FX (foreign exchange) line.

This is a phone line that directly connects you to the central phone exchange in the city. Your local telephone company's business office can give you the details. Such a direct line is expensive, costing around $\$ 300$ to $\$ 500$ to install, and maybe $\$ 200$ per month to operate.

An individual would have to do a lot of calling to justify the expense, but some user's groups have pooled their money and installed an FX line. The phone, computer and modem are located in a central place, and each member has a scheduled time when he or she can use the line. It's an awkward solution, but it beats paying a heart-stopping phone bill every month.

R

Do you have any questions about what equipment to buy or how to use it for telecommunications? Having problems get. ting on-line? Don't know what bulletin boards or national networks to access? Send these, or any other questions or com. ments you may have about telecommunications, to:

By MARGARET MORABITO

Based on the mail I've been receiving, there is great demand for information concerning the use of Commodore computers in education. Many teachers and parents have informed me that they've been using Commodores for educational purposes, but have had to work in a vacuum, relying solely on word of mouth or on their own resources to learn what works and what doesn't. This is a shame, because there are so many people using Commodores successfully in schools.
I'm keeping a database of all contacts made through the Resource Center, and I'll use this file to refer educators and parents to those who can answer their specific questions. With continued efforts, we can make it easier for people to gain reliable information on the use of Commodores in education.
Because of your input, I am now including a new section in the Resource Center: Tips from Teachers. I'm also compiling lists of Commodore software recommended for use by teachers and parents. The first of these lists will appear in next month's column. Now, let's get on with the topic for this month: word processors for teachers and students.

## Word Processing

Word processing is mentioned most often by teachers as their primary reason for using a computer. This is probably because word processing can benefit all participants in the educational process: teachers, students, administrators and parents. You can use it in all subject areas; future employers will most likely require di and yguran incorporate it

> Word processing is one of the most popular and practical applications for educational use. Find out how teachers, parents and students are using it.

into your day-to-day activities as a practical tool.

Even more important, word processing can be an excellent first step for wary newcomers to computing. It proves that you needn't know how to program to make good use of a computer. Also, it allows you to gradually and easily learn the fundamentals of computer use: creating, saving, loading and printing files. While using a word processor, you can type faster and make mistakes without the inconvenience of having to use "white out" or correcto tape. Word processing leaves you freer to think, and it results in professional-looking printouts.

These factors alone should be enough to spur you on to learn how to use a word processing program. Moreover, they show that this application could be a boon to students who may now shy away from essay writing and typing.

Beyond this, though, there are more practical reasons to use a word processor. It can help you to organize your thoughts, rearrange sentences and phrases, delete unwanted words, make multiple copies with neatly arranged columns and headings, and merge previously created paragraphs to form new documents. The ability
to produce high-quality printouts of documents, research papers, letters, quizzes, essays, reports and questionnaires is within the reach of all teachers, administrators and students.

## Class Preparation

A word processor can simplify a teacher's classroom preparation, which involves creating tests and other study materials.

For example, Lois Klamar, a learning disabilities teacher in the Cleveland, Ohio, public school system, uses a C-64 with the Magic Desk I cartridge and an NEC 8023 dot-matrix printer to do the bulk of her test preparation. Klamar states, "The C. 64 is not only a big time saver for me, but the printouts are so neat and legible that my students can easily read them."

Klamar's tests follow the format of some workbooks and standardized evaluation tests: fill-in-the-blank, multiple choice and true/false questions. By using these formats for testing, her students are one step ahead on standardized tests because of their familiarity with the formats.

Edward Gase, an earth science teacher at the Fairfield, Ohio, Freshman School, also relies heavily on word processing to help with preparation of tests and other classroom materials. Says Gase, "When I tell other teachers how quickly I can put together a final exam at the end of a term, they don't believe me." A teacher's hectic schedule makes timesaving techniques a major concern, and word processing tends to cut down on class preparation, whatever the subject.

Joseph Smith is a health and phys-
ical education teacher in the Allentown, Pennsylvania, school district. Like most teachers, Smith doesn't consider himself a programmer, but he frequently uses his computer for classroom preparation. With his C-64, Cardco Write Now word processor and Cardco LQ/3 letter-quality printer, Smith creates study sheets for his students.

This entails listing important facts and then replacing the key words on the sheet with blanks. He uses the study material when he shows films in his health-instruction classes. The students first read over the sheets; then, while watching the film, they fill in the blanks as the material is encountered.

After the film is over, Smith puts a copy of the study sheet on the overhead projector and reviews each health fact. This follow-up allows the students to correct their answers and any misspellings, thus reinforcing the health concepts several times within one class period.

## In the Classroom and at Home

While word processing helps teachers outside the classroom, it is also an effective learning tool for students, both in class and at home. Incidentally, a helpful by-product of word processing is that it provides a good way to learn key placement. While some students may already be proficient typists, those who aren't can benefit from using these programs.

Another advantage is that students don't have to worry as much about making mistakes when doing writing assignments, because it is so easy to delete and fix errors on a word processor. The rewriting done on a computer is far less annoying and much neater than when done with pen and paper!

Following are ten examples of word processor-related classroom exercises that teachers can use. These are just a few of an endless list of possibilities.

1. Creating designs, pictures, graphs and charts.
2. Filling out forms and information sheets.
3. Writing and revising in-class compositions.
4. Creating a class story to which each student contributes a small part. * www.Commodore.ca

Moy Nol Reprint Wimoul Permission
5. Writing reports: for example, science lab reports.
6. Creating a newspaper in the classroom.
7. Note-taking.
8. Studying outlining techniques and implementing them on the word processor.
9. Studying and practicing research techniques: for example, practicing proper footnote and bibliographic formats.
10. Taking tests.

It's important to realize that many students may have a C- 64 or a C- 128 at home because of Commodore's low prices. There are also many goodquality yet inexpensive word processing programs from which you can choose.
Built-in spelling checkers also provide a service to students in pointing out misspelled words. Patricia Walters, a sixth- and seventh-grade teacher in Jones County, Mississippi, noticed an improvement in her eight-year-old son's ability to spell since he learned to use the word processor on their new C-128 at home.

Walters noticed that her son deliberately made spelling errors when typing words that he knew. When questioned about this, he said he enjoyed correcting the word when the spelling checker caught it! (This kind of spelling activity could be modified and incorporated into a classroom exercise where the teacher plants misspelled words that students must locate and correct without activating the spelling checker.)

## When Looking for a Word Processor

Most word processors perform similar tasks, but the ease of performance and the difficulty of learning how to use the programs differ widely, so you should investigate those factors carefully when looking for a word processor. You should also consider the age and learning level of the students who will be using it. If possible, take the time to try out several programs before you buy.
Here are some questions to ask when purchasing a word processor.

1. How easy or difficult is it to enter, delete, move and rearrange text?
2. What size document can the word processor hold in memory?
3. How easy or difficult is it to save and load documents?
4. Can you save sections of a larger document to disk?
5. Can you merge and link documents that have been previously saved to create a new one?
6. How difficult is it to print out a document?
7. Which printers will the word processor work with?
8. Can you use any of the Commodore's keyboard graphics characters in the word processor? (This is a help in creating graphs or other designs within your documents.)
9. Can this program's files be used with other word processors? (If the program saves its files as sequential files, it can probably share its files with another Commodore word processor. Also, if the program lets you choose between Commodore and standard ASCII formats, this makes compatibility even more likely.)
10. Does the manufacturer provide any other programs, such as a database or a spreadsheet, which could be integrated with the word processor for future activities?
11. How easy is it to control margins, line spacing and special features such as underlining and centering of text?
12. Does the word processor provide a means for visually previewing the document before printing it out? It can be frustrating to painstakingly create a document on the computer screen, only to find that it looks totally different when formatted and printed out.
13. Does the word processor include a spelling checker?

You should consider these questions with reference to the person who will be using the program. If you have a classroom of third graders, you will want to start them off with a word processor that's easy to handle and doesn't necessarily have a ton of features.

If, on the other hand, your students are tenth graders, they're probably ready for a high-powered word processor that will provide them with the opportunity to write lengthy papers using a variety of formatting features.

I would like to hear from those of you who are using word processing

RUN APRIL 1986 / 93

 $\square$

## THE SMART WAY TO SAVE YOUR RUN

You＇ll find all your favorite issues of RUN in minutes－and in great condition－ with smart－looking binders or file cases from Jesse Jones．

Sturdy，protective file cases make for easy access to each issue，while rugged binders allow magazines to lay flat for easy reference．Both hold 12 issues，are custom－designed in brown with gold spine lettering，and are unconditionally guaranteed．

## Order today！

File Cases：$\$ 6.95$ ea．； $3 / \$ 20 ; 6 / \$ 36$ ． Binders：$\$ 8.50$ ea．； $3 / \$ 24.75 ; 6 / \$ 48$ ．

YES！Please send me protection for my RUN：

## B The Resource Center

either in or out of the classroom．I am also interested to know which word processor you＇re using and the ages of the students involved．

## Tips from Teachers

Several teachers have told me about an efficient method of making com－ puters more accessible to students． Where there aren＇t enough computers to go around，you can create a＂mobile computer unit．＂This is a stand on wheels that holds the computer，disk drive and monitor（and possibly a printer）．You just roll the computer to where the students are，rather than moving the students．You can also make a large movable table that will hold several computer systems．

Curt Cardine，the principal of the Winchester Elementary School in New Hampshire，uses one mobile unit to move among classrooms． In the morning kindergarten class－ room，small groups of students work with the computer．He then rolls the unit into other classrooms of the school as needed．Cardine relies on this unit as his blackboard when the computer is involved in his teach－ ing of fourth－through sixth．grade classes．

Leon Sullivan，a science teacher and computer coordinator at South Hopkins High School in Nortonville， Kentucky，also uses a mobile com－ puter unit．Sullivan built ten mobile tables for use in his advanced math and science classes．

If you are using Commodore computers for educational purposes（at home or in a school）and would like to share your ex－ periences in the Resource Center，write me a letter detailing the equipment you＇re us－ ing，the subject areas you＇re involved in， the grade level or age of your students， software that has been effective and any other information you feel like including． Send letters to：

Margaret Morabito<br>clo The Resource Center<br>RUN Editorial<br>80 Pine St．<br>Peterborough，NH 03458

You can also leave messages in my on－line mail boxes：CompuServe （70616，714），Delphi（MARGM）and QuantumLink（MARGM）．

From p. 10.
For the C-128, you must change the value of C in line 700 , using the number listed in line 790 . You can change the program's time delay or the Magic character by making appropriate changes to line 700 . If you disable your stop key before executing the subroutine, you'll keep others from discovering your trick.

\$2D7 SuperBowlSunday-To get a super pass-completion percentage on this game, throw short passes to your receivers, with three backs also going out for the pass.

> Jason Simpkins
> Millersburg, PA
\$2D8 LogoandPrintShop-You can use Logo to create pictures to work with the popular Print Shop program. After creating your Logo picture on the screen, type:

## SAVEPICT "filename

This saves the picture as a 33 -block hi-res file, named filename.PIC1, and as a five-block color file, named filename.PIC2. The first one will load into your Screen Magic when you choose the Get Screen option. After loading it, you can add text if you wish, and you can load or save the altered screen at will.

> Thomas M. Trocco
> New York, NY
\$2D9 Color/no-colormonitor-Some software locks the screen into its own colors, which are not necessarily legible or attractive. If you use the Commodore 1701 or 1702 monitor, connected through three wires on the back, there's a solution close at hand. Disconnect the chroma cable, and your display will appear in black, white and various shades of gray. The chroma cable is the one that carries the color signals. It plugs into the red-colored jack.

Michael F. Lehman
Los Angeles, CA
\$2DA Too-small video display-Sometimes the top or bottom lines of your screen may not show up on your monitor or television. When that happens, the problem is not in your computer, but in the adjustment of your

May Nol Reprinf Withoul Permission
display. Look on its front or rear panel for two controls marked "vertical height" (or "size") and "vertical linearity." Their names may be somewhat different, or they may be abbreviated in some way. A few inexpensive sets do not have them at all.

When you find the controls, first fill your computer screen with text or keyboard graphics. Next, adjust the two controls so you can see the top and bottom lines, and so the lines in between are not distorted. You'll notice that the height and linearity controls interact somewhat, affecting the picture's size and uniformity. The best method is to adjust one and then the other, going back and forth until your picture is satisfactory.

If the controls are on the back panel, you can position a mirror so you can see the screen while adjusting them.

## Bernhardt Sandler <br> Venice, CA

\$2DB Screen Wiper-This routine for the C-64 or VIC wipes the screen clear in two visually interesting ways. It's one of the most elegant and intriguing screen effects we've seen.

The direction of this screen-clearing technique is controlled by the value of C1\$ in line 500 . If it's a left-arrow symbol, it clears your screen like a theatre curtain pulled from the sides toward the center. If $\mathrm{C} 1 \$$ is an up-arrow symbol, the curtain works from the top and bottom.

As printed, the routine is for the C.64. For the VIC, substitute line 580 for line 500 .

\$2DC Rearranging directories-Many computers and disk accessories provide an easy way of loading the first program in your disk directory. It's easy to put any program into the first position, even if another one is there at the moment. The secret is in using the Copy command, which can make a duplicate of any program already on disk.

By skillfully combining the Copy command with other disk commands, you can rearrange your directory at will. For example, if the first program in your directory is Oldfirst, and the one you want to move there is Newfirst, here is the procedure to follow:

1. Use the Rename command to rename Oldfirst, using a temporary name like Templ.
2. Use the Copy command to copy Templ as Oldfirst. This puts a properly named Oldfirst somewhere other than in the first directory position. At this point, the first position is still held by Templ.
3. Use the Scratch command to eliminate Templ from the directory. This vacates the first directory position; it will be filled by the next directory entry added to the disk.
4. Rename Newfirst, using something like Temp2.
5. Copy Temp2 as Newfirst. This puts Newfirst in the first directory position, which was vacated when you scratched Templ.
6. Scratch Temp2.

Here is the complete syntax for accomplishing the swap:

## OPEN 15,8,15

PRINT\# 15 ,"RENAME0:TEMP1 $=$ OLDFIRST"
PRINT\#15,"COPY0:OLDFIRST $=$ TEMP1"
PRINT\#15,"SCRATCH0:TEMP1"
PRINT\#15,"RENAME0:TEMP2 $=$ NEWFIRST"
PRINT\# 15, "COPY0:NEWFIRST $=$ TEMP2"
PRINT\#15,"SCRATCH0:TEMP2"
CLOSE15
Don't forget that PRINT\# must be entered as one word, with no embedded spaces.

If you use the DOS wedge or another utility that provides simplified commands, those commands can make your program-swapping even easier. If you plan a lot of swapping, you can write a simple program to do it.

## Louis F. Sander Pittsburgh, PA

\$2DD Disk Name Changer-This program, which you can use on any Commodore computer, lets you change the name of a disk without reformatting it or losing any files. Make absolutely certain you type it in correctly, since it modifies the directory header block, and program errors could corrupt the disk irreparably. Lines 200-210 are the ones that write to the disk, so you should check them with extraordinary care. Also, SP\$ in line 100 should contain exactly 16 spaces.

Use your computer to:

- immediately locate anything you have on your tapes.
- generate a list of exactly what you have on your tapes. either alphabetically or in order of length.
- instantly find the best spot on your tapes to record new material.
- be certain that you won't accidentally erase something you don't want to.
- and much. much more, quickly and effortlessly.
with VideoFile, the first and only computer program specifically designed to solve all the problems of the home video user. VideoFile is so logically written and fun to use, any member of the family can learn to use it in minutes! Say goodbye to the scraps of paper and the messy scribbled tape boxes, and get VideoFile!
Realizing that VideoFile is its own best salesman, we've prepared a demo disk for $\$ 10.00$ (return it for $\$ 10.00$ credit towards VideoFile!) Available now: VideoFile for the Com-modore-64. Due in October: VideoFiles for IBM compatibles and Apple IL.

## VideoFile

Box 480210 . Dept. R4, Los Angeles. CA 90048

## MOVING? subscription PROBLEV:

Get help with your subscription by calling our new toll free number:

## 1-800-227-5782*

between $9 \mathrm{am} . \mathrm{m}$ and 5 pm . EST, Monday-Friday.

If possible, please have your mailing label in front of you as well as your cancelled check or credit card statement if you are having problems with payment.

If moving, please give both your old address and new address.

# Checksums for RUN 1985 Programs 

Last February, in response to many reader inquiries, we began a series of checksum listings for programs published in 1985 before our C. 64 checksum program, 64 Perfect Typist, appeared in September. August was covered in February. Below, you will find the July programs' checksum listings.

To use the checksums, you must first load and run 64 Perfect Typist (see How to Type Listings, on page 110); then get out your July issue and begin typing in any program you find in the listings below. Every time you hit the return key, a number from 0 to 255 will appear. If you enter a line correctly, the number following the ":REM*" next to the line number will appear.

If you have already entered one of the programs from July and desire to check it for accuracy, simply enter 64 Perfect Typist, list lines individually or in small groups and position the cursor on the line you want to check. Next, press the return key, and, if you've entered the line correctly, the number that appears below the line will match the number following the ":REM*" in the listings.

You can look forward to seeing more of these listings of 1985 programs in subsequent 1986 issues of RUN.

Datafile Fast Print, by Mike Konshak; Juy, p. 30.

## COMMODORE CLINIC

## 1

## By JIM STRASMA

Do you have a problem or question about your Commodore computer? Commodore Clinic can help. Just send your question on a postcard (limit of one question per card) to:

Jim Strasma
Commodore Clinic
PO Box 6100
Macomb, IL 61455
Queries are answered only through this column, and, due to the volume of mail, only questions likely to appeal to the majority of our readers can be published.

## HARDWARE

Q: I use a C-128 with a Zenith monochrome monitor. I rigged up the system with two cables and a switch so I can use both 40 and 80 columns. I used a three. conductor audio cable so I can have sound, but I can't figure out which pin to hook it to on the RGB connector. The book doesn't list an audio-out pin, but there has to be one.

Harry Cowles San Diego, CA

A: Actually, there doesn't have to be any separate audio pin for sound in 80 column mode. The SID chip still works in its usual fashion and through its usual connector, even in $80 \cdot$ column mode. Since there is already an audioout pin on the 40 -column video connector, there's no need for an additional audio pin in the RGB connector, and none is provided.
modem. However, if I buy a non-Commodore printer, both accessories plug into the parallel port. What can I purchase that will allow me to use both at the same time?

Sean Hull Schenectady, NY

A: Unless you have a Plus/4, I would not count on using both a printer and a modem simultaneously, because most Commodore computers (with the exception of the Plus/4) utilize one I/O chip for both modem and printer operations. This chip can't perform both functions at once.

One cure is to use them alternately, storing text to be printed in memory until you can pause your modem conversation long enough to print what is in memory. Many terminal programs allow this.

As for plugging non-Commodore printers into the parallel port, it isn't necessary and I don't recommend it. The normal way to control most printers from current Commodore computers is via the serial bus, and special interfaces to make this possible are widely available at reasonable cost. The problem is that the parallel port on most Commodore computers is not a Centronics parallel printer port, such as you find on most printers; rather, it is an experimenter's port, not intended to be compatible with other parallel devices. It is, however, almost compatible with serial RS- 232 devices, and makes a good modem port.

Q: I am going to purchase a printer and use it, if possible, at the same time as a

## Q: I have a C. 64 with a C2N Datassette.

 On the end of the cassette plug is a thinwire, trailing away from the main plug. Where does this wire go?

## Thomas Lovie <br> Address not given

A: That wire hooks up to a nut and bolt on the back of Commodore's 8000 -series computers. When using the C 2 N with a 64 , there are only two safe things to do with the wire. One is to wrap it around the main cord and cover it completely with electrical tape, in case you ever have a computer that can use it. The other is to cut it off entirely. Be sure to do one or the other; if you leave it hanging around loose, it could damage your computer's electrical components.

Q: Since parallel data transfer is faster than serial, why do you think Commodore has stuck with serial data transfer for its disk drives?

## Keith Marshall Trinidad, West Indies

A: Commodore has used parallel data transfer for years on its larger systems, specifically IEEE-488. It is an effective but expensive way to control one or more disk drives and printers. With the introduction of the VIC, Commodore used a serial bus instead, to cut costs. (Not many VIC owners would have happily paid $\$ 50$ extra for each drive or printer cable.) At that point Commodore did not anticipate selling disk drives to more than ten percent of its VIC owners. Commodore stayed with the serial cable on the 64 and 128 to ensure compatibility with existing equipment.

## PROGRAMMING

#### Abstract

Q: POKE 808,225 disables the run/stop and restore keys and the List command. What is the Poke that reactivates these commands?

Larry S. Harmon El Centro, CA

A: To be sure of the correct value on your computer, simply type:
PRINT PEEK (808)
when you turn on your computer, and press the return key. The number that appears on the next line is the one to type after POKE 808 to restore normal function to that location. On my C-128 in 64 mode, the number is 237, so you would type POKE 808,237.

Q: I have a C. 64 and 1541 and am heavily into programming. I've noticed that when I save a ten-line program, it uses 40-78 blocks on my disk. I don't see how.

Robert Schiffman<br>Hampton Bays, NY

A: Most likely, your program altered the start-of-Basic or end-of-Basic pointer during a run. That's the problem. You saved your program to disk after running it. I suggest you never save a program to disk after running it.
Instead, load the old version (if any) from disk, make your changes, save the new version and only then type RUN. In the case of your ten-line program, you need only load it, clear the screen, list all lines on the screen at once, type NEW, move the cursor back to the top of the screen and press the return key until all ten lines have been reentered. To be sure, list again. Then save the program before trying to run it. I'm sure it will then take only a few blocks on disk.

Q: I have a C. 64 and want to know how to copy the $8 K$ Basic interpreter to another portion of memory and have Basic go to the "new" interpreter.

Tim Watkins
Pawtucket, RI

A: There are two steps involved. First, you copy the interpreter into the desired new address, using the Transfer (T) command of most extended machine language monitors. Next, you must convert absolute address references from one memory range to another. This is done with the New Locator ( N ) command of most such monitors. Be especially careful of absolute addresses hidden within tables and immediate addresses. With the help of a good disassembly of the Basic ROMs, such as What's Really Inside the Commodore 64 (from Schnedler Systems), all this can and has been done. However, I sug. gest you start with something much smaller than an 8 K interpreter. As a good first effort, you could move DOS 5.1 from its current home near the end of the \$C000 block of memory to its beginning.

## RJPATRS

Q: Lately, my 1541 won't read or write on track 1; it just clicks against the end stop. A disk-aligning program from CSM Software has an option to check alignment where it reads all the tracks, and it says my drive is in alignment. Please help.

## Marty Westra <br> Sioux Falls, SD

A: Since the alignment program claims that all is well, how sure are you that track 1 can't be read from or written to? Here's a short program to test writing to track 1 :

10 OPEN 15,8,15
20 OPEN 4,8,4,"\#"
30 PRINT\#4,"TRACK.ONE"
40 PRINT\# $15, "$ U2";4;0;1;1
50 CLOSE 4
60 CLOSE 15
70 END
Here's another to read back what you've written:

10 OPEN $15,8,15$
20 OPEN 5,8,5,"\#"
30 PRINT\#15,"U1";5;0;1;1
40 FOR X $=1$ TO 9
50 : GET\#5,A\$
60 : PRINT AS;
70 NEXT X
80 CLOSE 5
90 CLOSE 15
99 END

If you really do have a problem using track 1 , you will need to adjust the end stop or, better yet, replace it with a Quiet Drive spring from Cardinal Software. This is not the same as aligning the drive, although alignment can affect the end stop and setting the end stop can affect alignment. Be sure both are correct before relying on the drive.

Q: While using my C-64, I am occasion. ally unable to recall a letter that is listed in the disk directory, even though documents before and after it can be recalled. Is this a fault of the 1541 or is it a bad spot on the disk? Is there any way to recall this missing letter?

## G. L. Curtice <br> Rockport, TX

A: If there is an asterisk (*) next to the filetype in a directory listing, that file is called a "splat" file, because it was not properly closed when first written. The disk will not let you load such files normally, because it has no way of knowing where the file ends.

A skilled user can rescue at least part of a splat file by opening it with a filetype of "S,M" and copying it to another file. The new file can be closed when no more valid data can be retrieved from the splat file. Once rescue attempts are completed, such files should immediately be deleted from the disk with the disk Validate or Collect command. On your C-64, type:
OPEN $15,8,15$,"V 0 "
Do not omit the zero!
On a C-128 or Plus/4, type:

## COLLECT D0

This is essential; erasing the file any other way creates a serious risk of losing other valuable data on the disk.

The most common cause of a splat file is running out of room on the disk while saving a file. If the disk formatted properly when you first bought it and has not been abused, the odds are that it is still in good shape physically. Similarly, if you can still load other letters, your 1541 is probably in good shape as well.

Q: While I was using a copy program, my screen went berserk. Now when I turn on

## BCommodore Clinic

the computer, the entire screen fills with exclamation marks. Anything I type is accepted, but I cannot understand what I type. For example, I type " $R$ " and the system shows " $S$ " on the screen. Would you please tell me how to get rid of the exclamation points?

## Wilson Fern Chicago, IL

A: This is a simple, though annoy. ing, problem-bit 0 of your video RAM is defective and stuck in the "one" position. This causes all characters with even values in the collating sequence of your character set to display as the next higher character in the set. That's why spaces become exclamation marks and R becomes S .

To make sure, type an A. It should appear as an A, because it has an odd value in the collating sequence and thus needs bit 0 set.

The cure is equally simple-re-
place the video RAM chip. On most Commodore computers, it is a widely available 2114 static RAM. If it is socketed on your machine, replacement is a matter of unplugging the old chip and plugging in the new one, making sure both point in the same direction and that no stray electricity, static or otherwise, gets near the computer during the process. If the old chip is soldered in, have a skilled technician remove it and add a socket for the replacement.

## SOFTWARE

Q: Is the $C P / M$ in the Commodore 128 more or less like WordStar?

## Eleanor Patterson Garden Valley, CA

A: Let me answer with another ques-tion-Is Commodore DOS like Easy Script? In both cases, we're compar-
ing apples with oranges. CP/M and Commodore DOS are disk operating systems. Both are fundamental to the correct operation of the C-128 in their respective modes. However, neither one is itself a word processor like WordStar or Easy Script.

We tend to think of WordStar in conjunction with CP/M because it works on the C-128 when we are in CP/M mode. (It was written for the Z. 80 microprocessor CP/M uses.) Commodore has developed a version of WordStar for the 128, but you may be disappointed by it.

Despite its famous name and widespread use, I consider WordStar to be inferior to several other word processors already available for the C-128. The main reason to choose WordStar is if you already use it on another computer and don't want to learn a new program, or if you need a specialized feature only WordStar offers.

## Autoboot Maker Enhancement

I have an enhancement for the C - 128 program, Autoboot Maker, which is included in your article, "Disk Commands on the C-128," December 1985. The following line will allow you to rewrite your autoboot disks:
205 CHAR1,7,6," REWRITE AUTO BOOT? (Y/N)",1

Chuck Geiger<br>Address not given

## A Smart Idea

I have read with great pleasure Margaret Morabito's education column, "The Resource Center," which made its debut in your January 1986 issue.

I am a teacher at the Fairfield Freshman School in Fairfield, Ohio. I have been advocating the use of Commodore computers over the more expensive Apples and IBMs for several years without much luck. Your column may help. I'm sure you won't mind my giving a copy of it to the administrators and computer labs of this school district.

Edward A. Gase Hamilton, OH

## Looking for a Date?

William Driscoll's Magic trick in the RUN 1986 Special Issue (p. 148) fails to take into consideration the following.
Normally, a year that is evenly divisible by 4 (for example, 1984) is a leap year. However, there are at least two exceptions to this rule. First, if theweace incoteobbrdives ble by 100 Moy Nol Reprint Withoul Permission
( 1800,1900 , for instance), then it is not a leap year. Second, if the year is evenly divisible by 1000 (year 2000, for example), then it is a leap year.

Mr. Driscoll's clever program does not consider this problem of exceptions. Therefore, it will make an error every time it is required to cross over one of the exception-to the-rule dates. For example, the time from March 1, 1899 to March 1, 1900 is not 366 days; it is 365 .

## A Misleading Ad?

Several points made in the advertisement by Skyles Electric Works on P. 121 of December's issue are incorrect, or at least couched in terms that make the ad very misleading.
First, they claim that their drive is the largest hard disk available for the C-64 and C-128. They do suffix that claim with the phrase "at a price under $\$ 800$," but the reader is left with the impression that it is the largest drive available at any price. In truth, Fiscal Information, Inc., and Computer Specialties, Inc., both manufacture hard drive systems of greater capacity. Both companies offer tenmegabyte systems, and Fiscal also sells 20 -megabyte drives for Commodore computers.

The Skyles ad incorrectly claims that its drive is the fastest (at 12 times the speed of the 1541). The Fiscal system has always been 43 times as fast as the 1541, and that system has recently been improved to operate nearly 60 times as fast as the CBM floppy. That is nearly five times faster than the Skyles drive!

Finally, they claim that on a percharacter basis (I will translate to "cost-per-megabyte"), their drive is the least expensive. In the table below are the figures comparing the three companies' systems (based on recent advertising prices).

## A Commodore Jamboree

The Commodore Association of the Southeast, Inc. (C.A.S.E.), will hold its annual meeting and jamboree 1986 at the Opry Land Hotel in Nashville, Tennessee, on April 26-27, 1986.
C.A.S.E. is a consortium of the user's groups of the southeastern United States. The general public is welcome to attend this two-day jamboree. For further information, contact Commodore Association of the Southeast, Inc., PO Box 110386, Nashville, TN 37222.

Bob Smith, President

## Programming and Design Toolkit

Programmers' Basic Toolkit (Epyx, Inc., 1043 Kiel Court, Sunnyvale, CA 94089), a Basic programming aid for the C-64, includes over 100 new Basic commands to let you add to your application programs assembly language operations that can enhance your game designs, computer animation, business graphics and other applications.

Special commands allow you to develop professional-quality application programs for home or businessuse graphics. For those of you with artistic talent, the toolkit makes it possible to create high-quality graphics like those in many commercial games.

Other commands enable you to incorporate computer joystick functions into your programs and provide printing utilities. Available on disk for under $\$ 45$.

## WillWriter Will Write Your Will Right

WillWriter, a new book/software package from self-help legal publisher Nolo Press (950 Parker St., Berkeley, CA 94710), helps you write simple, legally binding personal wills.

The 170 -page book explains the legal concepts and conditions involved in drawing up a will and provides information on aspects of estate planning, including trusts and probate avoidance methods.

The software leads you step by step through each section of the will, with

## On-line Typesetting Service

Compuprint (715 Washington St., Ayden, NC 28513) is providing a 24 . hour typesetting service via modem to anyone requiring professionalquality phototypeset printing. Over 300 fonts in all sizes are available.

Typeset copy is mailed to you or a specified location the day after receiving your order. A one-time fee of $\$ 26$ allows you to subscribe to the service. There is no charge for online use of the computer and no per-character charges. Cost includes $\$ 3.10$ per photoset page or $\$ 1$ per laserset page processing charge. If you don't have a modem, a disk may be mailed to the company and typeset for $\$ 4.10$ per page and return postage.

## Improve Your Aim

Type-Snyper, a new computer game that teaches you to type, has been released by Tymac Controls (127 Main St., Franklin, NJ 07416).

The game/tutorial features an attack helicopter that drops bundles of words and letters that you must intercept by typing them before they can destroy the city.

Sixteen different exercises are included, with lessons ranging from proper finger placement to increasing speed and accuracy. Type-Snyper automatically adjusts exercises to emphasize areas needing extra practice and also displays typing speed achieved. Available on disk or cassette for the C-64 for $\$ 39.95$.

Volks Mini, from Anchor Automation.

## Volks Mini

The Volks Mini, a new modem from Anchor Automation (6913 Valjean Ave., Van Nuys, CA 91406), provides 300 or 1200 bps data transmission capabilities for your Commodore computer or terminal with a standard serial communications port and a telephone, without need for an ac outlet, power supply or additional interconnection cables.

The manual dial, manual or autoanswer modem plugs into the user's port on the back of your computer and connects with a phone jack to the telephone.

The Volks Mini modem retails for $\$ 199$ and includes a two-year, enduser warranty.

## Multipass Disassembler

The Sourcerer (Chessoft Ltd., 723 Barton St., Mt. Vernon, IL 62864) is a multipass disassembler that converts 6500 series machine language (object code) into assembly language (source code).

The assembly language produced can be assembled with the Commodore assembler or loaded for editing with the Commodore editor. Any specified range of code within a program can be disassembled, and long programs automatically produce linked files for easy editing.

The Sourcerer is available on disk for the C-64 for \$29.95.

## May the Forth Be with You

The Forth-83 Handy Reference Card is now available free from the Forth Interest Group (PO Box 8231, San Jose, CA 95155). It functions as a pocket programming aid, listing the required commands of the most recent Forth 83 standard.

Commands are grouped by function for easy reference and use. They include stack manipulation, comparison, arithmetic, memory, strings, numeric conversion, control structures, terminal input/output, mass storage input/output, program beginning and termination, dictionary addresses, compiler and interpreter words, vocabularies and defining words.

## How to Type in C. 64 and C.128 Listings from RUN

To simplify your typing of RUN's C-64 and C-128 program listings, we include checksum numbers. These numbers follow a REM statement at the end of each line (e.g., :REM* ${ }^{*}$ 123). These checksum numbers necessitate your using RUN's Perfect Typist programs, listed below, Use 64 Perfect Typist for C-64 programs and 128 Perfect Typist for 128 Mode programs on the C-128.
Type in 64 Perfect Typist (Listing 1) or 128 Perfect Typist (Listing 2) and save it to either tape or disk before running. When you want to type in a 64- or a 128 mode program, first load and run the appropriate Perfect Typist listing. Two SYS numbers will be displayed on your screen. Jot these down and keep them handy. They are the SYS numbers that you type in for deactivating and reactivating the checksum program.
After Perfect Typist has been loaded and run, start typing in the program listing from RUN as you normally do. The only difference is that now, after you press the return key to $\log$ in each line, a 1., 2- or 3 -digit number will appear below the line on the left margin. This is the checksum number, ranging from 0 to 255 ,

If this number matches the checksum number printed in the listing after the :REM*, then you know you have typed that line correctly. Then you type the next program line right over the previous line's checksum value. If the checksum numbers do not agree, analyze your line on screen for any typographic errors or omissions. Make the needed changes and press the return key again to $\log$ in

3øø DATA $\emptyset 13, \emptyset 32, \emptyset 32$
those changes. A new checksum number will appear in place of the old one. Compare this to the magazine's number and then proceed to the next line.

When you've finished typing in your program, disable the Perfect Typist by typing in the appropriate SYS number for either 64 or 128 mode, and press the return key. Now you can save your program as usual, to disk or tape. (Before you attempt to run your new program, turn your computer off and back on to completely clear out the Perfect Typist program.)
You may save an incomplete program any time and continue it later. You will have to reload and run the Perfect Typist program, then load the incompleted program that you were working on, list it, and continue where you left off.

The 128 Perfect Typist will work in either 40 or 80 columns. Also, it lets you use the C-128's automatic line-numbering. If Auto is on, the checksum will be printed below the line you just entered, and the C-128 will place the next line number below the checksum.

All listings in RUN have been translated so that the graphics and control characters are designated as understandable key combinations. When you see instructions inside curly brackets, such as \{SHIFT L\}, you should hold down the shift key and press the L key. What you see on your screen will look quite different from what is designated inside the brackets. Another example is $\{22$ SPACEs $\}$. which instructs you to press the space bar 22 times.

RUN is a member of the CW Communications/Inc. group, the world's largest publisher of computer-related information. The group publishes over 50 computer publications in more than 20 major countries. Nine million people read one or more of the group's publications each month. Members of the group include: Argentina's Computerworld/Argentina; Asia's Asian Computerworld; Australia's Computerworld Australia, Australian PC World and Macworld; Brazil's DataNews and PC Mundo; China's China Computerworld and China Computerworld Monthly; Denmark's Computerworld/Danmark, PC World and RUN (Commodore); Finland's Mikro; France's Le Monde Informatique, Golden (Apple), OPC (IBM), Theoreme and Distributique; Germany's Computerwoche, Infowelt, PC Welt, Computer Business and RUN; Italy's Computerworld Italia and PC Magazine; Japan's Computerworld Japan; Mexico's Computerworld/Mexico, The Netherland's Computerworld Netherlands and PC World; Norway's Computerworld Norge and PC Mikrodata; Spain's Computerworld España, PC World and Commodore World; Sweden's ComputerSweden, Mikrodatorn and Svenska PC World; Switzerland's Computerworld Schweiz; The United Kingdom's Computer News, PC Business World and Computer Business; Venezuela's Computerworld Venezuela; the U.S's AmigaWorld, Computerworld, inCider, Infoworld, MacWorld, Micro Marketuorld, PC World, RUN, 73 Magazine, 80 Micro, Focus Publications and On Communications.

## The RUNning Board

$R U N$ invites you to contact its bulletin board (RUNning Board). In addition to up-to-date information about $R U N$ and the Commodore industry, the RUNning Board now presents useful computing hints and tips, corrections and updates to published articles, user's group information, an up-to-date list of selections for ReRUN and sneak previews of upcoming articles.

The RUNning Board also features a menu format that makes it easier and faster for you to select a specific section of the bulletin board. We use a standard protocol, 300 baud, one stop-bit, no parity, full duplex and a word length of eight bits.

The RUNning Board is definitely worth a call. You can get on-line anytime, 24 hours a day, seven days a week, by dialing our new number: 603-924-9704.

Manuscripts: Contributions in the form of manuscripts with drawings and/or photographs are welcome and will be considered for possible publication. Article text and any accompanying programs should be submitted on disk as well as in hard-copy form. RUN assumes no responsibility for loss or damage to any material. Please enclose a self addressed, stamped envelope with each submission. Unsolicited manuscripts that cannot be accepted will be returned only if accompanied by an appropriately sized, adequately stamped, selfaddressed envelope. Payment for the use of any unsolicited material will be made upon acceptance. All contributions and editorial correspondence (typed and double-spaced, please) shouid be directed to RUN Editorial Offices, 80 Pine Street, Peterborough, NH 03458; telephone: 603-924-9471. Advertising Inquiries should be directed to Advertising Offices, CW Communications/Peterborough, Inc., Elm Street, Peterborough, NH 03458; telephone: 800-441-4403. Subscription problems or address changes: Call 1-800-645-9559 or write to RUN, Subscription Department, PO Box 954, Farmingdale, NY 11737. Problems with advertisers: Send a description of the problem and your current address to: RUN, Elm Street, Peterborough, NH 03458, ATTN.: Barbara Harris, Customer Service Manager, or call 1-800-441-4403.

DELUXE RS232 INTERFACE

Whether you want to communicate with a modem, serial printer, another computer, or any other RS232 device, the Deluxe RS232 Interface is the correct choice. Any comparsion will show that it is best Commodore compatible RS232 interface available for any price! The Deluxe RS232 Interface is the culmination of 3 years of working with Commodore users who need an RS232 Interface. It supports all standard RS232 connections (2-8, 12, 20, 22) including Ruing Detect and Hi Speed Indicator. Four switches in the RS232 cover allow you to set the unit for virtually any standard RS232 configuration. The unit includes a 3 foot cable with either a male or female DB25 connector (specity which). RS232 plus and minus voltages. Users Manual includes a type-in Basic terninal program, basic program transler routine, and other examples. Add $\$ 2.00$ for shipping. Suggested retail \$49.95
