| Machine Language Routines \& Important Hardware Locations |  |  |
| :---: | :---: | :---: |
|  | HEX |  |
| Print character in Register A to screen | FFD2 | All PETS |
| Get a character from keyboard | FFE4 | All PETS |
| Input a character from keyboard | FFCF | All PETS |
| Prints a carriage return, line feed (CR. LF) | FDDO | (not in 2001-8) |
| Print a space | FDCD | (not in 2001-8) |
| Print a byte in Register A | E775 | (not in 2001-8) |
| Input a byte in Register A | E7B6 | (not in 2001-8) |
| ASCII to Hex in Register A | E7E0 | (not in 2001-8) |

Entry for machine language monitor: SYS (1024) or SYS (64785)
on 2001-16,-32

Graphics/Lower Case Select: POKE 59468, $12=$ Graphics POKE 59468, $14=$ Lower Case
NOTE: PET Models 2001-16, -32 behave differently in the lower case mode than Model 2001-8 (shifted and unshifted alpha are reversed).
Casette Motor Control: POKE 59411. 53 Turns Motor On
POKE 59411, 61 Turns Motor Off
CRT blanking (2001-8 only): POKE 59409, 52 Turns Screen Off POKE 59409, 61 Turns Screen On

## GENERAL INFORMATION

Numeric Accuracy: 9 digits
Numeric Range: $\pm 1.70141184 \mathrm{E}+38( \pm 32767$ for integers)

$$
\pm 2.93873587 E-39
$$

Numeric, Integer, \& Array Variable Range:
Valid variables are any alphabetic (A-Z) character optionally followed by other alphanumeric (A-Z, 0-9) characters. Keywords cannot be used within variable names, and only the first two characters are recognized.

## STRING FUNCTIONS

| FUNCTION | EXAMPLE | DEFINITION |
| :---: | :---: | :---: |
| ASC | $100 \mathrm{~N}=$ ASC (AS) | Returns the ASCII value of the first character in the string. |
| CHRS | $1001 \$=$ CHRS $(\mathrm{N})$ | Returns the character equivalent of the ASCII value N . |
| LEFTS | $\begin{aligned} & 100 \text { IS = LEFT\$ } \\ & (\mathrm{AS}, \mathrm{~N}) \end{aligned}$ | Returns N leftmost characters of the string. |
| LEN | $100 \mathrm{~N}=$ LEN (AS) | Returns number of characters in the string. |
| MIDS | $\begin{aligned} & 100 \text { IS }=\text { MIDS } \\ & (A S, X, Y) \end{aligned}$ | Returns Y characters, starting from the $X$ th character of the string. |
| RIGHT\$ | $\begin{aligned} & 100 \text { IS = RIGHTS } \\ & (A \$, N) \end{aligned}$ | Returns N rightmost characters of the string. |
| STR\$ | $1001 \$=\operatorname{STRS}(\mathrm{N})$ | Returns string value of the number. |
| VAL | $100 \mathrm{~N}=\mathrm{VAL}(\mathrm{A}$ ) | Returns numeric value of the string |

## SPECIAL SYMBOLS

| SYMBOL | EXAMPLE | FUNCTION |
| :---: | :---: | :---: |
| * | $1001 \$=$ ABC ${ }^{\text {A }}$ | String Delimiter |
| \$ | $100 \mathrm{IS}=$ "XYZ" | String Identifier |
| \% | $100 \mathrm{~B} \mathrm{\%}=1 \mathrm{NT}(\mathrm{N})$ | Integer Identifer |
| \% | $100 \mathrm{X}=0: \mathrm{Y}=4$ | Allows multiple statement lines. |
| :- | 100 PRINT $X$ Y $Y$ | Prints numbers separated by 3 spaces. |
| : | 100 PRINT AS: B\$ | Prints strings concatenated. |
| . | 100 PRINT X Y | Prints numbers at tab stops |
|  |  | $10,20,30$, and 40. |

## BASIC ABBREVIATIONS

Most BASIC words can be abbreviated using the first letter of the word and the second letter shifted. For example: LIST $=$ Li, RIGHT $\$=$ R i, etc. In some cases, there can be abbreviations that could represent more than one word le.g.: STEP and STOP). A list of these exceptions follows:

| RESTORE | $=$ REs | STEP | $=$ STe |
| :--- | :--- | :--- | :--- |
| GOSUB | $=$ GOs | LEFTS | $=$ LEf |
| CLOSE | $=$ CLO | STRS | $=S T r$ |
| RETURN | $=$ RET | PRINT | $=?$ |
| INPUT\# | $=\operatorname{In}$ | PRINT\# | $=P r$ |
| TAB | $=T a$ | SPC( | $=S p$ |

## MATHEMATICAL FUNCTIONS

| FUNCTION | EXAMPLE | DEFINITION |
| :---: | :---: | :---: |
| ABS (X) | $100 \mathrm{R}=\mathrm{ABS}(\mathrm{A})$ | Returns the absolute value of the argument. |
| EXP (X) | $100 \mathrm{R}=\operatorname{EXP}(\mathrm{A})$ | Returns the value of the constant ' $e$ ' raised to the argument. |
| INT (X) | $100 \mathrm{R}=1 \mathrm{NT}(\mathrm{A})$ | Returns the largest integer less than or equal to $A$. |
| LOG (X) | $100 \mathrm{R}=\mathrm{LOG}(\mathrm{A})$ | Returns the logarithm of the argument to the base ' $e$ '. |
| RND ( X ) | $100 \mathrm{R}=\mathrm{RND}(\mathrm{A})$ | Returns a random number from 0 to 1 if: <br> Ar 0 Random numbers are equal. <br> $A=0$ Same sequence of random numbers. <br> A) O Different sequence of random numbers on every execution of RND. |
| SGN(X) | $100 \mathrm{R}=\mathrm{SGN}(\mathrm{A})$ | If argument $<0 . R=-1$. <br> If argument $=0, R=0$. <br> If argument) $0, R=1$. |
| SQR (X) | $100 R=S Q R(A)$ | Returns the square root of $A$ |
| TRIGONOMETRIC FUNCTIONS |  |  |
| ATN (X) | $100 \mathrm{R}=\mathrm{ATN}(\mathrm{A})$ | Returns the arctangent of the argument (in radians). |
| $\cos (X)$ | $100 \mathrm{R}=\operatorname{Cos}(\mathrm{A})$ | Returns the cosine of the argument (in radians). |
| $\operatorname{SIN}(X)$ | $100 \mathrm{R}=\operatorname{SiN}(\mathrm{A})$ | Returns the sine of the argument (in radians). |
| TAN (X) | $100 \mathrm{R}=$ TAN $(\mathrm{A})$ | Returns the tangent of the argument (in radians). |

## USER-DEFINABLE FUNCTIONS

DEF FN
Allows the user to define functions. The newly defined function's name will be "FN" followed by any legal variable name. Limitations: string functions are not allowed, function can only have one argument, and the function is restricted to one line.

## STATEMENT EXAMPLE

SAVE SAVE "FILE", T

## DEFINITION

Saves current program in memory to logical file $T$ and gives it the name "FILE"

| SPC | 10 PRINTSPC (A) | Prints A spaces |
| :---: | :---: | :---: |
| TAB | 10 PRINTTAB (A) | Tabs cursor to position $\mathrm{A}+1$ on the CRT. |
| VERIFY | VERIFY | Compares next encountered program on built in cassette with program within memory. |
|  | VERIFY "FILE". T | Compares specified file name on logical file T with program within memory. |
| WAIT | 150 WAIT X,Y,Z | Stops BASIC program flow until contents of memory location $X$, anded with variable $Y$, and exclusive ored with variable $Z$ is not equal to zero ( $Z$ is optional and defaults to zero). |

## I/O DEFAULTS \& PRE-ASSIGNED IEEE DEVICE ADDRESSES

PRIMARY

## DEVICE ADDRESSES

$0=$ Keyboard
-1 $=$ Panel Mounted Cassette
$2=$ Optional External Cassette
3 = Video Screen (CRT)
B = Floppy Disk Drive
4-30 = External IEEE488
Device Addresses

- Indicates Default Value

## SECONDARY ADDRESSES

 FOR CASSETTES- $0=$ Tape being opened for a "Read"
$1=$ Tape being opened for a "Write"
$2=$ Tape being opened for a "Write" with an "end of tape" header being forced when the file is closed
3-31 $=$ Other IEEE488 Secondary Addresses

## STATUS BYTE (ST) <br> NOMENCLATURE

| ST <br> BIT <br> POS. | ST <br> NUL. <br> VALUE | CASSETTE <br> READ | IEEE <br> R/W | TAPE VERIFY <br> \& LOAD |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 1 |  | Timeout on Write <br> (Listener) |  |
| 1 | 2 |  | Timeout on Read <br> (Talker) |  |
| 2 | 4 | Short Block |  | Short Block |
| 3 | 8 | Long Block |  | Long Block |
| 4 | 16 | Unrecoverable <br> Read Error |  | Any Mismatch |
| 5 | 32 | Checksum Error | End of File | EOI Line went low <br> on last byte trans |
| 6 | 64 | Checksum Error |  |  |
| 7 | -128 | End of Tape | Device not present | End of Tape |

## OPERATORS

| RELATIONAL | OPERATO | OR EXAMPLE | RESULT |
| :---: | :---: | :---: | :---: |
| EQUAL | $=$ | $9=7$ | FALSE |
| LESS THAN | 1 | $5<10$ | true |
| GREATER THAN | ) | 6) 10 | FALSE |
| LESS THAN OR EQUAL | $\mathrm{f}=$ | $4 \mathrm{c}=4$ | true |
| GREATER THAN OR EQUAL | ) $=$ | 4) $=3$ | true |
| NOT EQUAL | () | 4 () 8 | true |
| BOOLEAN |  |  |  |
| AND - | AND | 1 AND 0 | 0 |
| OR + | OR | 1 ORO | 1 |
| NOT | NOT | NOT 1 | 0 |
| ARITHMETIC |  |  |  |
| ADDITION | $+$ | $4+3$ | 7 |
| SUBTRACTION | - | 12-9 | 3 |
| MULTIPLICATION | * | 4 * 4 | 16 |
| EXPONENTIATION | $\uparrow$ | 4 † 2 | 16 |
| DIVISION | 1 | $12 / 3$ | 4 |
| NEGATION ( $\mathrm{A}=3$ ) | - | -A | -3 |
| STRING |  |  |  |
| CONCATENATION | + | " $A^{\prime \prime}+$ " ${ }^{\prime \prime}$ | " $A B$ " |

ORDER OF OPERATIONs: Parenthesis, Exponentiation, Negation Multiplication \& Division (from left to right). Addition \& Subtraction (from left to right), Relational Operators, Not. And. Or.

## SPECIAL VARIABLES

| $\operatorname{POS}(0)$ | Returns position of cursor on CRT |
| :---: | :---: |
| FRE (0) | Read only variable, ? FRE ( 0 ) returns free bytes of memory |
| TIS | Internal time of day clock "HHMMSS" (i.e. "024500" is $2: 45$ AM) |
| TI | Read only variable counting 60ths of seconds since power up |
| ST | Read only I/O status byte (see I/O section) |
| $\pi$ | Mathematical constant $\mathrm{PI}=3.1415927$ |
|  | PET MONITOR |
|  | COMMANDS |
|  | M addr1, addr2 Displays memory from addr1 to addr2. |
|  | .R Displays 6502 registers. |
|  | G addr1 $\begin{aligned} & \text { Begin execution of machine } \\ & \text { language program at addr1. }\end{aligned}$ |
|  | 'NAME". \#1 Loads a machine language program called "NAME" from cassette 1. |
|  | S"NAME", \#1. Saves a machine language <br> addr 1, addr2 program to cassette 1 from addr 1 <br> to addr2 called "NAME". |
|  | addr $1 \times x \times x \times x \quad$ Modify memory in format that was displayed with . M command. |
|  | addr1 $\mathbf{x x} \times \mathrm{xx} \mathrm{xx} \quad$ Modify registers in format that was displayed with . R commiand. |

## BASIC COMMANDS

| COMMAND CLR | EXAMPLE <br> CLR | DEFINITION <br> Clears all references to variables and program control statements (all variables equal zero or null). |
| :---: | :---: | :---: |
| CONT | CONT | Continues program after a stop, or use of stop key. Invalid after an error, editing. CLR, or NEW. |
| LIST | LIST <br> LIST - A <br> LIST B - <br> LIST X-Y | Lists entire program. <br> Lists program up to line A. <br> Lists program from line B. <br> Lists program from line $X$ to line $Y$. |
| NEW | NEW | Clears the present BASIC program from memory and clears all variables to zero or null. |
| RUN | RUN | Starts program execution from first line of program. |
|  | RUN W | Starts program execution from line W. |

## STATEMENTS: DECLARES \& VARIABLE ASSIGNMENTS

| STATEMENT DATA | EXAMPLE <br> 10 DATA 1.2,3,4 <br> 20 DATA <br> UP, DOWN <br> 30 DATA"1.1", <br> "LOOK OUT" | DEFINITION <br> Specifies data to be read via the "READ" command. Data is read from left to right. <br> Strings need not be surrounded by quotes unless they contain spaces. commas, colons, or graphics. |
| :---: | :---: | :---: |
| DIM | $\begin{aligned} & 25 \text { DIM A } 10) \text {. } \\ & \text { A\%(2.3) } \\ & 30 \text { DIM AS }(4,11) \\ & 45 \text { DIM }(4.20,2) \\ & 50 \text { DIM QS (L.4.M) } \end{aligned}$ | Dimensions an array of a specified type of variable to a specified amount of elements (zeroth element included). |
| LET | $\begin{aligned} & 10 \text { LET }=7 \\ & 20 \text { LET U } \%=7 \\ & 30 \text { LET US }=" 7 " \\ & 40 \mathrm{Y}=\mathrm{X}=3 \end{aligned}$ | Assigns the number 7 to the floating point variable $U$. <br> Assigns the number 7 to the integer variable U\% <br> Assigns the string " 7 " to the string variable U\$. <br> Assigns the value of the numeric expression to the variable $Y$ <br> (Note: LET is optional). |

Defines the following characters in the line as a remark or comment which is non-executable.

## STATEMENTS: PROGRAM CONTROL

| STATEMENT | EXAMPLE |
| :--- | :--- |
| END | 9000 END |
|  |  |
| FOR - NEXT | 10 FORA $=$ |
|  | NTO P STEPR |
|  | 50 NEXTA |

## DEFINITION

Ends program execution.

Sets up a loop which executes the statements between lines 10 and 50 $((P-N)+1) / R$ times.
GOSUB 10 GOSUBM

Transfers program flow to the subroutine at line M. Program flow resumes at line immediately after 10 when the subroutine executes a RETURN.

| GOTO | 10 GOTOY | Transfers program flow to line $Y$. |
| :---: | :---: | :---: |
| IF - THEN | $\begin{aligned} & 25 \text { IFA ( ) B } \\ & \text { THENA }=A+1 \end{aligned}$ | If the condition of the statement between the IF and the THEN is true the statement following the THEN is executed. Otherwise the next line is executed. |
|  | 30 IFA ( ) B | Transfers program flow to line |
|  | THEN 500 | 500 if condition is true, otherwise |
|  | 30 IFA ( ) B <br> GO TO 500 | executes next line. |

| ON • GOSUB | 70 ONH GOSUB <br> 100.200 .300 | Transfers program flow to a <br> subroutine at lines 100,200, or <br> 300 depending on the value of the <br> index variable $H$. |
| :--- | :--- | :--- |
| ON • GOTO | 70 ONH GOTO <br> $100,200.300$ | Transfers program flow to line <br> number 100.200, or 300 depend- <br> ing on the index variable $H$. |
| RETURN | 100 RETURN | Returns program flow to the line <br> immediately following the subroutine <br> call: subroutine exit. |
| STOP | 200 STOP | Stops program execution. |
| SYS | 150 SYS (X) | Program flow is transferred to a <br> machine language program at decimal <br> address $X$ |
| 150 SYSX | 150 USR(Y) | Passes a parameter $Y$ in the floating <br> point accumulator to a machine <br> language routine pointed to by <br> memory locations $1 \& 2$. |

## STATEMENTS: I/O

| STATEMENT | EXAMPLE | DEFINITION |
| :---: | :---: | :---: |
| CLOSE | 100 CLOSET | Closes logical file T. |
| CMD | 10 CMDT | Commands logical file T to monitor IEEE Bus. |
| GET | 20 GETAS | Accepts a single string character from the keyboard. |
| GET \# | 20 GET \#T. X | Accepts a single character from logical file $T$. |
| INPUT | 100 INPUT <br> 100 INPUT <br> Y.R\$.A\% | Accepts a number for the variable $Y$ from the keyboard. <br> Accepts a number, a string, and an integer from the keyboard. |
| INPUT \# | $\begin{aligned} & 150 \text { INPUT \#T, } \\ & \text { Y,A,RS } \end{aligned}$ | Accepts two numbers and a string from logical file $T$. |
| LOAD | $\begin{aligned} & 40 \text { LOAD } \\ & 60 \text { LOAD } \\ & \text { "ABC", T } \end{aligned}$ | Loads next file or program encountered on the built in cassette into memory. <br> Loads program or file named "ABC" into memory from logical file $T$. |
| OPEN | 100 OPENT. D.S. "NAME" | Opens logical file T and assigns device address D. secondary address S as well as a file name "NAME" to it (See I/O default table). |
| PEEK | $100 \mathrm{~A}=\operatorname{PEEK}(\mathrm{X})$ | Returns decimal value of memory location $X$ to $A$. |
| POKE | 100 POKF X, A | Puts the quantity A into memory location $X$. |
| PRINT | 100 PRINTY <br> 100 PRINT " $Y$ " <br> 100 PRINT YS. Y <br> 100 PRINT <br> Y\$: RS: A; | Prints the variable $Y$ on the CRT. Prints the character " $Y$ " on the CRT. Prints the string, then tabs to the next tab stop (10, 20, 30, 40 ...) and prints the number. <br> Prints Y\$ concatenated with RS, and the number $A$ separated by 3 spaces from R\$. The carriage return is suppressed. |
| PRINT \# | $\begin{aligned} & 150 \text { PRINT \# T . } \\ & \text { A.B } \end{aligned}$ | Prints variables A. B onto logical file $T$. <br> NOTE: ? \# is not valid. |
| READ | $\begin{aligned} & 200 \text { A. } \mathrm{D} . \\ & \text { AS.C.A\% } \end{aligned}$ | Assigns these variables their values from the data statements. |
| SAVE | SAVE | Saves the current program in memory on the built in cassette, no name is specified. |
